

Part 1

OPERATION OF INSTRUMENTS AND CONTROLS—

Chapter 1-2

Keys and Doors

- [Keys](#)
- [Side doors](#)
- [Power windows](#)
- [Trunk lid/Back door](#)
- [Hood](#)
- [Fuel tank cap](#)
- [Electric moon roof](#)
- [Convertible top](#)

Keys

Your vehicle is supplied with two kinds of key.

1 Master key—This key works in every lock.

2 Subkey—This key is for side doors.

To protect things locked in the glovebox, trunk or luggage compartment when you have your vehicle parked, leave the subkey with the attendant.

Since the side doors, trunk lid and back door can be locked without a key, you should always carry a spare master key in case you accidentally lock your keys inside the vehicle.

KEY NUMBER PLATE

Your key number is shown on the plate. Keep the plate in a safe place such as your wallet, not in the vehicle.

If you should lose your keys or if you need additional keys, duplicates can be made by a Toyota dealer using the key number. You should also put a copy of the key number with your important papers.

Side doors

LOCKING AND UNLOCKING WITH KEY

Insert the key into the keyhole and turn it.

To lock: Turn the key forward.

To unlock: Turn the key backward.

Both side doors lock and unlock simultaneously with either side door. In the driver's door lock, turning the key once will unlock the driver's door and twice in succession will unlock both side doors simultaneously.

LOCKING AND UNLOCKING WITH IN-SIDE LOCK KNOB

Move the lock knob.

To lock: Push the knob forward.

To unlock: Pull the knob backward.

Closing the side door with the lock knob in the lock position will also lock the side door. Be careful not to lock your keys in the vehicle.

Vehicles with power door lock system—The side door cannot be locked if you leave the key in the ignition switch.

Driver's side

Passenger's side

LOCKING AND UNLOCKING WITH POWER DOOR LOCK SWITCH

Push the switch.

To lock: Push the switch on the front side.

To unlock: Push the switch on the rear side

Both doors lock or unlock simultaneously.

Before driving, be sure that the side doors are closed and locked, especially when small children are in the vehicle. Along with the proper use of seat belts, locking the side doors helps prevent the driver and passengers from being thrown out from the vehicle during an accident. It also helps prevent the side doors from being opened unintentionally.

Power windows— —Power window precautions

To avoid serious personal injury, you must do the following.

- Always make sure the head, hands and other parts of the body of all occupants are kept completely inside the vehicle before you close the power windows. If someone's neck, head or hands gets caught in a closing window, it could result in a serious injury. When anyone closes the power windows, be sure that they operate the windows safely.
- When small children are in the vehicle, never let them use the power window switches without supervision. Use the window lock button to prevent them from making unexpected use of the switches.
- Never leave small children alone in the vehicle, especially with the ignition key still inserted. They could use the power window switches and get trapped in a window. Unattended children can become involved in serious accidents.

—Side windows

The windows can be operated with the switch on each side door.

The power windows work when the ignition switch is in the "ON" position. However, if both side doors are closed, they work for 60 seconds even after the ignition switch is turned off. They stop working when either side door is opened.

OPERATING THE DRIVER'S WINDOW

Use the switch on the driver's door.

Normal operation: The window moves as long as you hold the switch.

To open: Lightly pull down the switch.

To close: Push up the switch.

Automatic operation (to open only):

Pull the switch completely down and then release it. The window will fully open. To stop the window partway, lightly push the switch up and then release it.

OPERATING THE PASSENGERS' WINDOW

Use the switch on the passenger's door. The driver's door also has a switch that controls the passengers' window.

The window moves as long as you hold the switch.

To open: Pull down the switch.

To close: Push up the switch.

If you push in the window lock button on the driver's door, the passenger's window cannot be operated.

Convertible models—The window lock button also locks the quarter windows.

For front passenger's use

For driver's use

—Quarter windows
(convertible)

The windows can be operated with switches on the center console.

The windows move as long as you hold the switch.

To open: Push on the lower side of the switch.

To close: Push on the upper side of the switch.

Trunk lid (coupe and convertible)/
Back door (liftback)—

To open the trunk lid or back door from the outside, insert the master key and turn it clockwise.

See “Luggage stowage precautions” in Part 2 for precautions to observe in loading luggage.

To close the trunk lid or back door, lower it and press down on it. After closing the trunk lid or back door, try pulling it up to make sure it is securely closed.

—Lock release lever

To open the trunk lid or back door from the driver's seat, pull up on the lock release lever.

Keep the trunk lid or back door closed while driving. This not only keeps the luggage from being thrown out but also prevents exhaust gases from entering the vehicle.

—Luggage security system

This system deactivates the lock release lever so that things locked in the trunk or luggage compartment can be protected.

1. (Except convertible) Push down the security lock levers to lock the rear seatbacks.

After locking the rear seatbacks, try folding them down to make sure they are securely locked—otherwise, someone could get into the trunk or luggage compartment by folding down a rear seat.

2. After closing the trunk lid or back door, insert the master key and turn it counterclockwise to deactivate the lock release lever.

After closing the trunk lid or back door, try pulling it up to make sure it is securely locked.

Hood

To open the hood, do the following.

1. Pull the hood lock release lever. The hood will spring up slightly.

2. In front of the vehicle, pull up on the auxiliary catch lever and lift the hood.

3. Hold the hood open by inserting the support rod into the slot.

Before closing the hood, check to see that you have not forgotten any tools, rags, etc. and return the support rod to its clip—this prevents rattles. Then lower the hood and make sure it locks into place. If necessary, press down gently on the front edge to lock it.

After inserting the support rod into the slot, make sure the rod supports the hood securely.

Fuel tank cap

1. To open the fuel filler door, pull the lever up.

- **Do not smoke, cause sparks or allow open flames when refuelling. The fumes are flammable.**
- **When opening the cap, do not remove the cap quickly. In hot weather, fuel under pressure could cause injury by spraying out of the filler neck if the cap is suddenly removed.**

2. To remove the fuel tank cap, turn the cap slowly counterclockwise, then pause slightly before removing it. After removing the cap, hang it on the cap hanger.

It is not unusual to hear a slight swoosh when the cap is opened. When installing, turn the cap clockwise till you hear a click.

- Make sure the cap is tightened securely to prevent fuel spillage in case of an accident.
- Use only a genuine Toyota fuel tank cap for replacement. It has a built-in check valve to reduce fuel tank vacuum.

Electric moon roof

Sliding operation

Tilting operation

To operate the moon roof, use the switches beside the interior light.

The moon roof works when the ignition switch is in the "ON" position. However, if both side doors are closed, it works for 60 seconds even after the ignition switch is turned off. It stops working when either side door is opened.

Sun shade operation—

The sun shade can be opened or closed by hand.

Sliding operation—

To open: Push the switch on the "SLIDE" side.

The sun shade will be opened together with the roof.

To close: Push the switch on the opposite side of the "SLIDE" side.

As a precaution when closing, the roof stops at the three-quarters closed position before fully closing. Therefore, release the switch and then push it again to close it completely.

Tilting operation—

To tilt up: Push the switch on the "UP" side.

To lower: Push the switch on the "opposite of the "UP" side.

You may stop the moon roof at any desired position. The roof will move while the switch is being pushed and stop when released.

Convertible top— —Convertible top precautions

CAUTION

To avoid serious personal injury, you must do the following.

- When the vehicle is moving, always keep the head, hands and other parts of the body of all occupants away from the roof opening. Otherwise, you could be seriously injured if the vehicle stops suddenly or if the vehicle is involved in an accident.
- Always make sure nobody places his/her head, hands and other parts of the body in the roof opening before you close the roof. If someone's neck, head or hands gets caught in the closing roof, it could result in a serious injury. When anyone closes the roof, first make sure it is safe to do so.
- Never leave small children alone in the vehicle, especially with the ignition key still inserted. They could use the moon roof switches and get trapped in the roof opening. Unattended children can become involved in serious accidents.
- Never sit on top of the vehicle around the roof opening.

CAUTION

- When raising or lowering the convertible top, keep hands clear from the hinges of the top side rails and any part of the top linkage.
- The vehicle should never be driven with the convertible top partially lowered. Make sure the top has been either fully latched to the windshield frame or fully lowered before driving.

NOTICE

- ◆ *Make sure there are no items or packages between the rear seat-back and the convertible top storage area when raising or lowering the convertible top. Even small items may interfere with convertible top operation and can cause damage.*
- ◆ *Do not sit or place excessive weight on the convertible top; when the top is up or down, damage to the top may result.*

- ◆ *Do not raise or lower the convertible top when the temperature is below 5° C (41° F), or damage to the top material or rear window may result. If necessary to do so, warm the vehicle in a heated garage prior to operating the convertible top mechanism.*
- ◆ *Do not lower the convertible top if the top is damp or wet. Possible interior water damage, water stains or mildew of the top material may result.*
- ◆ *When the convertible top is completely lowered, keep the rear window defogger turned off to avoid damage to the convertible top.*

—Lowering the convertible top

LOWERING THE CONVERTIBLE TOP

The ignition switch must be in the “ON” position to operate the convertible top.

1. Lower all the side windows, quarter windows, and sun visors. Then pull the latch handles fully backward.

Before operating, make sure the manual control switch is not in the “MANUAL” position. (See “If the convertible top does not raise or lower” in Part 4.)

2. Push and hold the convertible top control switch on the “OPEN” side until the convertible top is completely lowered. Raise the sun visors.

INSTALLING THE TOP BOOT

The top boot is used to cover and conceal the completely lowered convertible top. It is in the trunk, and is stored in a plastic bag.

3. Place the top boot over the lowered convertible top. Then tuck its outer edge under the body moldings.

4. Secure the top boot snaps to the ones on the quarter trim.

5. Attach the fastener tape on the top boot to that on the rear seatback.

—Raising the convertible top

REMOVING THE TOP BOOT

1. Push the top boot backward to separate its fastener tape from the tape behind the rear seatback.

2. Release the top boot snaps from the quarter trim.

3. Pull out the outer edge of the top boot from under the body moldings. Put the removed top boot in the plastic bag and store it in the trunk.

RAISING THE CONVERTIBLE TOP

The ignition switch must be in the "ON" position to operate the convertible top.

4. Lower the sun visors. Check that all the side windows and quarter windows are lowered. Then push and hold the convertible top control switch on the "CLOSE" side until the top touches the windshield frame.

5. Push the latch handles fully forward till they are hooked.

Visually check that the latch handles are fully seated in the strikers. Also, pull on the convertible top side rails to make sure the top is securely hooked.

6. Raise all the side windows, quarter windows, and sun visors.
