

Part 1

OPERATION OF INSTRUMENTS AND CONTROLS—

Chapter 1-4 Lights, Wipers and Defogger

- Headlight and turn signals
- Emergency flashers
- Instrument panel light control
- Ignition switch light
- Interior lights
- Personal light
- Windshield wipers and washer
- Rear window wiper and washer
- Rear window defogger

Headlights and turn signals

To turn the lights on, twist the knob on the end of the lever.

FIRST CLICKSTOP: Only the parking, side marker, tail, license plate and instrument panel lights turn on.

SECOND CLICKSTOP: The headlights also turn on.

The lights automatically turn off when the driver's door is opened with the ignition turned off. To turn them on again, turn the key to the "ON" position or actuate the headlight switch. If you are going to park for over one week, make sure the headlight switch is off.

NOTICE

To prevent the battery from being discharged, do not leave the lights on for a long period when the engine is not running.

For high beam, push the lever away from you. Pull it toward you for low beam. For the headlight flasher, pull it further back.

A blue light in the instrument panel indicates high beam is on.

The headlight flasher works even when the headlight switch is off.

For signaling turns, move the lever up or down in the conventional manner.

The key must be in the "ON" position.

The turn signal is self-cancelling after a turn, but after a lane change, you may have to cancel it by hand. You can also signal a lane change by moving the turn signal lever partway and holding it there. If the green light in the instrument panel flashes faster than normal, It indicates that the front or rear turn signal bulb has burned out.

Emergency flashers

To turn on the emergency flashers, push the switch.

All the turn signal lights will flash.

Turn on the emergency flashers to warn other drivers if your vehicle must be stopped where it might be a traffic hazard. Always pull your vehicle as far off the road as possible.

The turn signal light switch will not work when the emergency flashers are operating.

NOTICE

To prevent the battery from being discharged, do not leave the switch on longer than necessary when the engine is not running.

Instrument panel light control

To adjust the brightness of the instrument panel lights, turn the knob.

Ignition switch light

For easy access to the ignition switch, the ignition switch light comes on when the driver's door is opened. The light remains on for a certain time after the driver's door is closed.

Interior lights

To turn on the interior light, slide the switch.

With the switch in the "DOOR" position, the light comes on when any of the side doors are opened.

Personal light

To turn on the personal light, push the switch.

Windshield wipers and washer

To turn the wipers on, move the lever. To make the washer squirt, push the button on the end of the lever.

The key must be in the "ON" position.

The wipers will operate at intervals when the lever is in the "INT" position. With the lever in this position, the wipers can be adjusted to operate at intervals of 2 to 11 seconds depending on the interval adjuster setting between "S" and "F".

Also, the wipers will automatically operate a couple of times after the washer squirts even with the lever in the "OFF" position.

If the washer does not work, check to see whether the washer tank is empty. For information on adding washer fluid, see "Adding washer fluid" in chapter 7-3.

In cold weather, warm the windshield with the defroster before using the washer. This will help prevent icing, which could block your vision.

NOTICE

Do not operate the wipers if the windshield is dry. It may scratch the glass.

Rear window wiper and washer

To turn the rear window wiper and washer on, twist the knob at the end of the lever.

The key must be in the "ON" position.

The wiper will operate at intervals when the knob is in the "INT" position.

The washer squirts at the two marked knob positions. The knob will automatically return from these positions when it is released.

If the washer does not work, check to see whether the washer tank is empty. For information on adding washer fluid, see "Adding washer fluid" in Chapter 7-3.

NOTICE

Do not operate the rear window wiper if the rear window is dry. It may scratch the glass.

Rear window defogger

To defog or defrost the back window, push the switch.

The key must be in the "ON" position.

The thin heater wires on the inside of the back window will quickly clear the surface. An indicator light will illuminate to indicate the defogger is operating.

Push the switch once again to turn the defoggers off.

Make sure you turn the defoggers off when the surfaces are clear. Leaving the defoggers on for a long time could cause the battery to discharge, especially during stop-and-go driving. The defoggers are not designed for drying rain water or for melting snow.

NOTICE

- ◆ To prevent the battery from being discharged, turn the switch on when the engine is running.
- ◆ When cleaning the inside of the rear window, be careful not to scratch or damage the heater wires.
