

This SRS airbag system has a service reminder indicator to inform the driver of operating problems. If either of the following conditions occurs, this indicates a malfunction of the airbags. Contact your Toyota dealer as soon as possible to service the vehicle.

- The light does not come on when the ignition key is turned to the "ACC" or "ON" position, or remains on.
- The light comes on while driving.

In the following cases, contact your Toyota dealer as soon as possible:

- The SRS airbags have been inflated.
- The front part of the vehicle (shaded in the illustration) was involved in an accident not of the extent to cause the SRS airbags to inflate
- The pad section of the steering wheel or front passenger airbag cover (shaded in the illustration) is scratched, cracked, or otherwise damaged.

Child restraint—

—Child restraint precautions

Toyota strongly urges the use of child restraint systems for children small enough to use them.

The laws of all fifty states in the U.S.A. and Canada now require the use of a child restraint system.

Your vehicle conforms to SAEJ1819.

If a child is too large for a child restraint system, the child should sit in the rear seat and must be restrained using the vehicle's seat belt. See "Seat belts" for details.

- **For effective protection in automobile accidents and sudden stops, children must be properly restrained using a seat belt or child restraint system depending on the age and size of the child. Holding a child in your arms is not a substitute for a child restraint system. In an accident, the child can be crushed against the windshield, or between you and the vehicle's interior.**

—Child restraint system

A child restraint system for a small child or baby must itself be properly restrained on the seat with either the lap belt or the lap portion of the lap/shoulder belt. You must carefully consult the manufacturer's instructions which accompany your child restraint system.

To provide proper restraint, use a child restraint system following the manufacturer's instructions about the appropriate age and size of the child for the child restraint system.

Install the child restraint system correctly following the instructions provided by its manufacturer of the system. General directions are also provided under the following illustrations.

Toyota recommends installing the child restraint system on the rear seat. According to accident statistics, the child is safer when properly restrained in the rear seat than in the front seat.

- Toyota strongly urges use of a proper child restraint system which conforms to the size of the child and is put on the rear seat. According to accident statistics, the child is safer when properly restrained in the rear seat than in the front seat.
- Never install a rear-facing child restraint system on the front seat. In the event of an accident, the force of the rapid inflation of the airbag can cause severe injury if a rear-facing child restraint system is installed on the front seat.
- Unless it is unavoidable, do not install a forward-facing child restraint system on the front seat.
- If you must install a forward-facing child restraint system on the front seat, move the seat as far back as possible.
- Make sure that you have complied with all installation instructions provided by the child restraint manufacturer and that the system is properly secured.

- Never install a rear-facing child restraint system on the front seat. In the event of an accident, the force of the rapid inflation of the airbag can cause death or serious injury if a rear-facing child restraint system is installed on the front seat.
- Unless it is unavoidable, do not install a forward-facing child restraint system on the front seat.
- If you must install a forward-facing child restraint system on the front seat, move the seat as far back as possible.
- After installing the child restraint system, make sure it is secured in place following the manufacturer's instructions. If it is not restrained securely, it can cause injury to the child in the event of a sudden stop or accident.

When not using the child restraint system, keep it secured with the seat belt. This will prevent it injuring passengers in the event of a sudden stop or accident.

Your vehicle has anchors for securing the top strap of a child restraint system. The anchor nuts are welded beneath the sheet metal to permit installation of an anchor bracket for a child restraint system.

To install an anchor bracket, use an 8 mm X 30 mm X 1.25 mm coarse thread metric bolt and 15mm (0.6 in.) spacer. Note that the bolts accompanying many child restraint systems are not metric. You can damage the anchor nuts on our vehicle if you force bolts with different thread into the anchor nuts.

For instructions about how to install the anchor bracket, see "Top strap anchors and locations."

If your child restraint system does not provide any of the necessary parts, you can purchase the following items from your Toyota dealer.

- * CRS installation kit
(Part No. 04731-22012)—contains 1 bolt, 3 types of spacers and 1 locking clip.
- * Bolt (Part No. 91511-60830)

—Built-in child restraint

The built-in child restraint system mainly consists of a child seat integrated in the rear seat and 5-point seat belts. Refer to the illustration to become familiar with the parts of the system. This child restraint system conforms to U.S. Motor Vehicle Safety Standard No. 213 and Canada Motor Vehicle Safety Standard No. 213.4.

1. Shoulder belts
2. Head restraint lock release button
3. Storage bag (for the head restraint and upper pad)
4. Head restraint and upper pad (for the rear seat)
5. Maximum shoulder height indicator label
6. Removable pad
7. Seat belt buckle
8. Seat belt release strap (black)
9. Seat belt adjustment strap (gray)
10. Child seat cushion
11. Seat belt buckle release button
12. Seat belt tabs
13. Owner's manual supplement
14. Shoulder belt, clip

This child restraint is designed for use only by children who weigh between 10 and 30 kg (22.1 and 66.1 pounds), and whose height is between 85 and 127 cm (33.5 and 50.0 inches).

The child should be at least one year old and must be capable of sitting upright alone and whose shoulder height is at or below the maximum shoulder height indicator.

It is important to use a rear-facing child restraint until the child is about a year old. A rear-facing restraint gives the child's head, neck and body the support they would need in a crash. See "—Child restraint system" for more information.

If your child's shoulders are above the indicator position, do not use the built-in child restraint. Your child should use the vehicle's seat belts.

According to accident statistics, children are safer when properly restrained in the rear seat than in the front seat.

CAUTION

Make sure the child is securely restrained with the built-in child restraint. Failure to follow the instructions provided here and also in the owner's manual supplement on the use of this child restraint system can result in serious injuries when your child strikes the vehicle's interior during a sudden stop or crash. Snugly adjust the belts provided with this child restraint around your child.

When using the built-in child restraint, observe the following:

- Use the belts for only one child at a time. Do not use the belts for two or more children.
- Be careful not to damage the belt webbing or hardware. Take care that they do not get caught or pinched in the seatback.
- Inspect the belt system periodically. Check for cuts, fraying, and loose parts. Damaged parts should be replaced. Do not disassemble or modify the child restraint belt system.

- Keep the belts clean and dry. If they need cleaning, use a mild soap solution or lukewarm water. Never use bleach, dye, or abrasive cleaners—they may severely weaken the belts.
- Replace the built-in child restraint assembly if it has been used in a severe impact. The entire assembly should be replaced even if damage is not obvious.
- Do not use a separate child restraint system over the opened built-in child restraint.
- When the built-in child restraint is in use, do not use the adult lap and shoulder belt instead of the built-in child restraint seatbelt as it can cause severe injury to the child in a sudden stop or crash.

1. Remove the head restraint and upper pad by pressing the head restraint lock release button and pulling up the head restraint and upper pad. Lower the child seat cushion.

2. Insert the head restraint and upper pad into the storage bag. Then place the storage bag into the trunk by attaching with velcro.

CAUTION

Do not use the built-in child restraint with the head restraint and upper pad installed. When using the built-in child restraint, the head restraint and upper pad should be stored in the trunk.

3. While pulling the seat belt release strap (black), pull both shoulder belts together.

Pull the seat belt release strap from above at about 45° angle to the child seat cushion.

If the shoulder belts cannot be pulled out, return the child seat cushion to an almost closed position, firmly pull the seat belt release strap and at the same time pull both shoulder belts, then lower the child seat cushion again.

4. Compress the shoulder belt clip to separate the right and left shoulder belts.

5. Pull down the seatback part of the removable pad. Make sure the child's shoulders are at or below the maximum shoulder height indicator label.

The removable pad is attached by fastener tapes.

6. Press the removable pad against the fastener tapes and install the belts go through the slots in the pad.

CAUTION

If your child's shoulders are above the maximum shoulder height indicator label, do not use the built-in child restraint. Your child should use the adult lap and shoulder belt.

CAUTION

If you have removed the removable pad for cleaning etc., do not use the built-in child restraint without the pad.

7. Sit the child on the child seat. Place a shoulder belt over each shoulder. Insert the tabs into the buckle.

CAUTION

- When the built-in child restraint is in use, do not use the adult lap and shoulder belt instead of the built-in child restraint seat belt as it can cause severe injury to the child in a sudden stop or crash.
- After inserting the tabs, make sure the tabs and buckle are locked and that the shoulder belts and buckle strap are not twisted.

- Do not insert coins, clips, etc. in the buckle as this may prevent you from properly latching the tabs and buckle.
- If the seat belt does not function normally, it cannot protect your child from injury. Contact your Toyota dealer immediately. Do not use the built-in child restraint until the seat belt is fixed.

8. Fasten the shoulder belt clip.

The purpose of the clasp is to keep the shoulder belts positioned correctly on the shoulders.

CAUTION

An unfastened shoulder belt clip will not help keep the belts on the child's shoulders. In a sudden stop or crash, the child may go too far forward and be seriously injured. Make sure the belt clip is fastened at all times.

- 9. Pull the seat belt adjustment strap (gray tab) firmly until the shoulder belts are snugly adjusted around the child's shoulders.**

You should not be able to put more than two fingers between a shoulder belt and the child's chest.

After adjusting the shoulder belt tightness, move the shoulder belt clip 5 to 8 cm (2 to 3 in.) below the child's chin. On each belt, the shoulder part should be centered on the child's shoulder. The belts should be away from the child's face and neck, but not falling off the child's shoulders.

- 10. To release the child from the seat belts, separate the shoulder belts then press the buckle release button.**

Move both belts off the child's shoulders.

- 11. To store the built-in child restraint, fasten the shoulder belt clip and return the seat belt buckle using the fastener tapes. Fold up the seat belt adjustment strap (gray tab) in the seat so that the edge of the strap does not come out the raised seat cushion. Raise the seat cushion and reinstall the head restraint and upper pad by inserting the posts into the holes.**

CAUTION

Before using the vehicle's seat belt, make sure the head restraint and upper pad is reinstalled. Do not occupy this position unless the head restraint and upper pad is reinstalled as serious injury may result.

—Types of child restraint system

Child restraint systems are classified into the following 3 types depending on the child's age and size.

(A) Infant seat

(B) Convertible seat

(C) Booster seat

Install the child restraint system following the instructions provided by its manufacturer.

(A) Infant seat

(B) Convertible seat

—Installation with 3-point
type seat belt

(A) INFANT SEAT INSTALLATION

An Infant seat is used in rear-facing only.

 CAUTION

- Never use rear-facing child restraint system in the front seat because the force of the rapid inflation of the passenger airbag can cause severe injury to the child.

- Do not use a rear-facing child restraint system in the rear seat if it interferes with the lock mechanism of the front seats. This can cause severe injury to the child and front passenger in case of sudden braking or a collision.

1. Run the lap and shoulder belt through or around the infant seat following the instructions provided by its manufacturer and insert the tab into the buckle taking care not to twist the belt. Keep the lap portion of the belt tight.

- After inserting the tab, make sure the tab and buckle are locked and that the lap and shoulder portions of the belt is not twisted.
- Do not insert coins, clips, etc. in the buckle as this may prevent you from properly latching the tab and buckle.
- If the seat belt does not function normally, it cannot protect your child from injury. Contact your Toyota dealer immediately. Do not use the seat until the seat belt is fixed.

2. Fully extend the shoulder belt to put it in the lock mode. When the belt is then retracted even slightly, it cannot be extended.

To hold the infant seat securely, make sure the belt is in the lock mode before letting the before letting the belt to retract.

3. While pressing the infant seat firmly against the seat cushion and seat-back, let the shoulder belt retract as far as it will go to hold the infant seat securely.

Make sure the seat belt is securely locked. Also make sure the child restraint system is secure by pushing and pulling it in different directions. Follow all the installation instructions provided by its manufacturer.

4. To remove the infant seat, press the buckle-release button and allow the belt to retract completely. The belt will move freely again and be ready to work for an adult or older child passenger.

(B) CONVERTIBLE SEAT INSTALLATION

A convertible seat is used in forward-facing and rear-facing depending on the child's age and size. When installing, follow the manufacturer's instruction about the applicable child's age and size.

- Never use a rear-facing child restraint system in the front seat because the force of the rapid inflation of the passenger airbag can cause severe injury to the child.

- Only when it is unavoidable should a forward-facing child restraint system be used on the front seat. Always move the seat as far back as possible because the force of deploying airbag would cause serious injury to the child.

- Do not use a rear-facing child restraint system in the rear seat if it interferes with the lock mechanism of the front seats. This can cause severe injury to the child and front passenger in case of sudden braking or a collision.

1. Run the lap and shoulder belt through or around the convertible seat following the instructions provided by its manufacturer and insert the tab into the buckle taking care not to twist the belt. Keep the lap portion of the belt tight.

CAUTION

- After inserting the tab, make sure the tab and buckle are locked and that the lap and shoulder portions of the belt is not twisted.
- Do not insert coins, clips, etc. in the buckle as this may prevent you from properly latching the tab and buckle.
- If the seat belt does not function normally, it cannot protect your child from injury. Contact your Toyota dealer immediately. Do not use the seat until the seat belt is fixed.

2. Fully extend the shoulder belt to put it in the lock mode. When the belt is then retracted even slightly, it cannot be extended.

To hold the convertible seat securely, make sure the belt is in the lock mode before letting the belt to retract.

3. While pressing the convertible seat firmly against the seat cushion and seatback, let the shoulder belt retract as far as it will go to hold the convertible seat securely.

CAUTION

Make sure the seat belt is securely locked. Also make sure the child restraint system is secure by pushing and pulling it in different directions. Follow all the installation instructions provided by its manufacturer.

4. To remove the convertible seat, press the buckle-release button and allow the belt to retract completely. The belt will move freely again and be ready to work for an adult or older child passenger.

(C) BOOSTER SEAT INSTALLATION

A booster seat is used in forward-facing only.

CAUTION

Only when it is unavoidable should a forward-facing child restraint system be used on the front seat. Always move the seat as far back as possible because the force of deploying airbag would cause serious injury to the child.

1. Sit the child on a booster seat. Run the lap and shoulder belt through or around the booster seat and child following the instructions provided by its manufacturer and insert the tab into the buckle taking care not to twist the belt.

Make sure the shoulder belt is correctly across the child's shoulder and that the lap belt is positioned as low as possible on child's hips. See "Seat belts" for details.

CAUTION

- Always make sure the shoulder belt is positioned across the center of child's shoulder. The belt should be kept away from child's neck, but not falling off child's shoulder. Failure to do so could reduce the amount of protection in an accident and increase the chance of injury.
- High-positioned lap belts and loose-fitting belts both could increase the chance of injury due to sliding under the lap belt during an accident. Keep the lap belt as low on your hip bone as possible.
- For the safety, do not place the shoulder belt under child's arm.
- After inserting the tab, make sure the tab and buckle are locked and that the lap and shoulder portions of the belt is not twisted.
- Do not insert coins, clips, etc. in the buckle as this may prevent you from properly latching the tab and buckle.

- If the seat belt does not function normally, it cannot protect your child from injury. Contact your Toyota dealer immediately. Do not use the seat until the seat belt is fixed.

2. To remove the child restraint system, press the buckle-release button and allow the belt to retract.

—Top strap anchors and locations

If your child restraint system requires the use of a top strap, latch the hood onto the anchor bracket and tighten the top strap.

See the following instructions to install the anchor bracket.

On the filler panel behind the rear seat

Center anchor—

- Using the illustration as a guide, run your fingers across the trim of the filler panel itself to locate the position of the holes underneath.
- Make a hole in the covering directly above the hole in the filler panel.
- Insert a 15 mm (0.6 in.) spacer and tighten down the anchor bracket for your child restraint system with a bolt. Torque the bolt to 16.5–24.7 N·m (1.68–2.52 kgf·m, 12.2–18.2 ft·lbf).

Outside anchors—

- Should you select to use the outer anchor positions, please contact your Toyota dealer for proper modifications to the filler panel.
- After modifications have been made to the filler panel, insert a 15 mm (0.6 in.) spacer and tighten down the anchor bracket for your child restraint system with a bolt. Torque the bolt to 16.5–24.7 N·m (1.68–2.52 kgf·m, 12.2–18.2 ft·lbf).
- Securely latch the hook of the top strap onto the anchor bracket and make sure the hook does not make contact with the filler panel.

To comply with Canada Motor Vehicle Safety Standards, vehicles sold in Canada are provided with a bracket set in the glovebox, designed for use with any of the 3 anchor locations shown in the illustration.

If your child restraint system does not provide any of the necessary parts, ask your Toyota dealer. (See “—Child restraint system.”)
