

Liftback (left seat)—On the luggage compartment wall

- Using the illustration as a guide, remove the cap of the anchor.
- Insert a 15 mm (0.6 in.) spacer and tighten down the anchor bracket for your child restraint system with a bolt. Torque the bolt to 16.5—24.7 N·m (1.68—2.52 kgf·m, 12.2—18.2 ft·lbf)

To comply with Canada Motor Vehicle Safety Standards, vehicles sold in Canada are provided with a bracket set in the glovebox.

Tilt steering wheel

To change the steering wheel angle, hold the steering wheel, pull up the lock release lever, tilt the steering wheel to the desired angle and release the lever.

When the steering wheel is in a low position, it will spring up as you release the lock release lever.

- Do not adjust the steering wheel while the vehicle is moving.
- After adjusting the steering wheel, try moving it up and down to make sure it is locked in position.

Outside rear view mirrors—

Adjust the mirror so you can see the side of your vehicle in the mirror.

Be careful when judging the size or distance of any object seen in the outside rear view mirror on the passenger's side. It is a convex mirror with a curved surface. Any object seen in a convex mirror will look smaller and farther away than when seen in a flat mirror.

—Power rear view mirror control

With power windows

Without power windows

To adjust a mirror, use the switches.

1. Master switch—To select the mirror to be adjusted. Place the switch at “L” (left) or “R” (right).
2. Control switch—To move the mirror, push the switch in the desired direction. If the engine is not running, the key must be in the “ACC” position.

NOTICE

If ice should jam the mirror, do not operate the control or scrape the mirror face. Use a spray de-icer to free the mirror.

—Folding rear view mirrors

The rear view mirrors can be folded backward for parking in restricted areas.

To fold the rear view mirror, push backward.

Anti-glare inside rear view mirror

To reduce glare from the headlights of the vehicle behind you during night driving, operate the lever on the lower edge of the mirror.

Daylight driving—Lever at position 1

The reflection in the mirror has greater clarity at this position.

Night driving—Lever at position 2

Remember that by reducing glare you also lose some rear view clarity.
