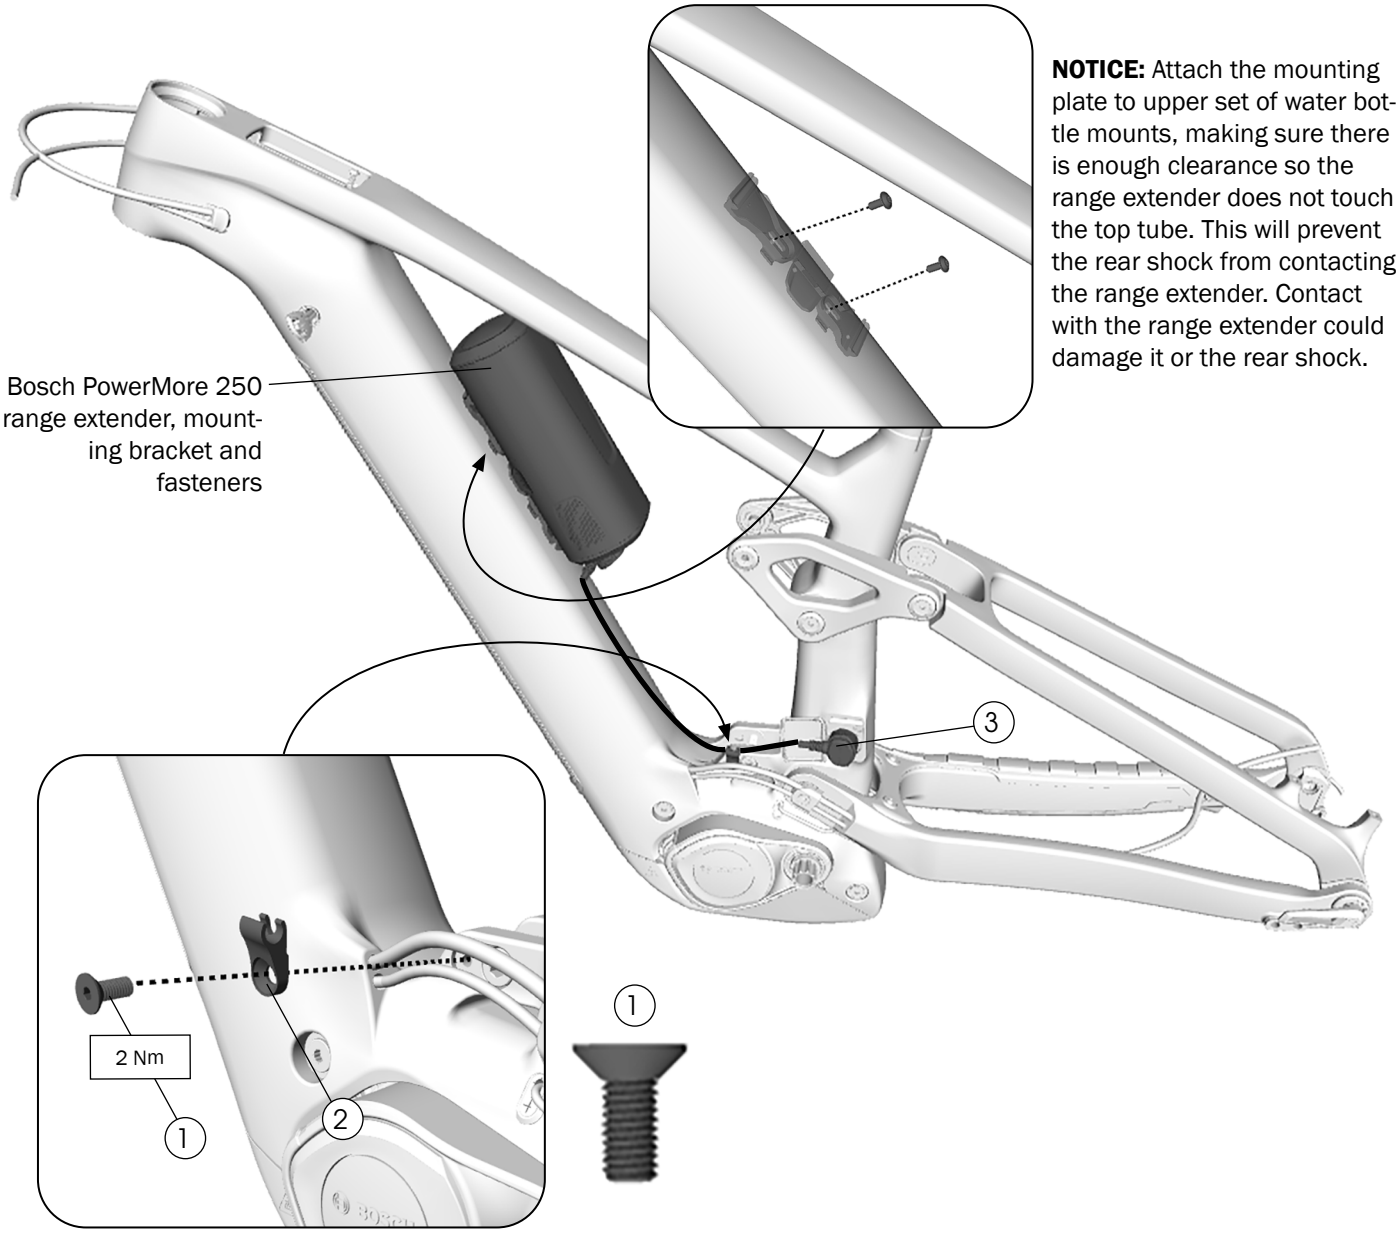
Mount a Bosch PowerMore 250 range extender to the 2025 Gen 5 Rail+

For details about the Bosch PowerMore 250, please refer to the PowerMore manual found on Bosch-ebike.com.

Use the Trek parts shown below to secure the PowerMore cable to the frame. Refer to the Bosch PowerMore manual for complete instructions including torque values.



NOTICE: Attach the mounting plate to upper set of water bottle mounts, making sure there is enough clearance so the range extender does not touch the top tube. This will prevent the rear shock from contacting the range extender. Contact with the range extender could damage it or the rear shock.
