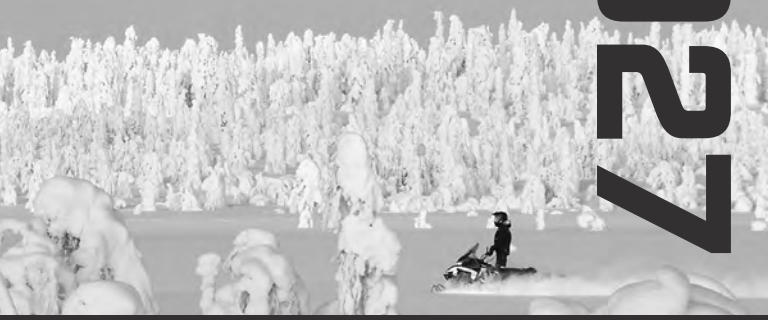
59 RANGER 600 EFI

OPERATOR'S GUIDE

Includes Safety, Use and Maintenance Information

2021



⚠ WARNING

Read this guide thoroughly. It contains important safety information.
Minimum recommended operators age: 16 years old.
Keep this operator's guide with the vehicle at all times.

619901068

Original Instructions

⚠ WARNING

This vehicle may exceed the performance of other vehicles you may have ridden in the past. Take time to familiarize yourself with your new vehicle.

GENERAL INFORMATION

Congratulations on your purchase of a new BRP snowmobile. Whatever model you have chosen, it is backed by the Bombardier Recreational Products Inc. (BRP) warranty and a network of authorized BRP snowmobile dealers ready to provide the parts, service or accessories you may require.

Your dealer is committed to your satisfaction. He has taken training to perform the initial set-up and inspection of your snowmobile as well as completed the final adjustment required to suit your specific weight and riding environment before you took possession.

At delivery, you were informed of the warranty coverage and signed the Pre-delivery Check List to ensure your new vehicle was prepared to your entire satisfaction.

KNOW BEFORE YOU GO

To learn how to reduce the risk for you, your passenger or bystanders being injured or killed, read the following sections before you operate the vehicle:

– *safety information*
– *vehicle information*.

Also read all safety labels on your snowmobile and watch attentively the safety video using the following QR code.

SAFETY MESSAGES

This operator's guide utilizes the following symbols and words to emphasize particular information:

The safety alert symbol ⚠ indicates a potential injury hazard.

⚠ WARNING

Indicates a potential hazard which, if not avoided, could result in serious injury or death.

⚠ CAUTION

Indicates a hazard situation which, if not avoided, could result in minor or moderate injury.

NOTICE

Indicates an instruction which, if not followed, could severely damage vehicle components or other property.

ABOUT THIS OPERATOR'S GUIDE

This operator's guide has been prepared to acquaint the owner, operator and passenger with this snowmobile and its various controls, maintenance and safe riding instructions.

The following terminology in regards to operator, passenger and vehicle configuration is used as follows throughout this guide:

- **Operator**: refers to the person being behind the controls and driving the snowmobile.
- **Passenger**: refers to a person sitting behind the operator.
- **1-UP**: refers to a model designed for an operator only.
- **2-UP**: refers to a model designed to accommodate **one** passenger.

Keep this operator's guide in the vehicle as you can refer to it for the operation, instructing others, maintenance and troubleshooting.

Note that this guide is available in several languages. In the event of any discrepancy, the English version shall prevail.

If you want to view and/or print an extra copy of your operator's guide, simply visit the following website:

www.operatorsguides.brp.com

The information contained in this document is correct at the time of publication. BRP, however, maintains a policy of continuous improvement of its products without imposing upon itself any obligation to install them on products previously manufactured. Due to late changes, some differences between the manufactured product and the descriptions and/or specifications in this guide may occur. BRP reserves the right at any time to discontinue or change specifications, designs, features, models or equipment without incurring any obligation upon itself.

This operator's guide should remain with the vehicle when it's sold.

RESPECT OF THE ENVIRONMENT

The guidelines that we support are not designed to limit your snowmobiling fun, but to preserve the beautiful freedom that you can experience only on a snowmobile! These guidelines will keep snowmobilers healthy, happy and able to introduce others to what they know and enjoy about their favorite winter pastime. So, the next time you hit the trails on a cool, crisp and clear winter day, we ask you to remember that you are paving the way for the future of our sport. Help us lead it down the right path! From all of us at BRP, thank you for doing your share.

There is nothing more exhilarating than snowmobiling. Venturing onto snowmobile trails that cross wild areas is an exciting and healthy winter sport. However, as the number of people using these recreational parks increases, so does the potential for damage to the environment. Abuse of land, facilities and resources inevitably leads to restrictions and closures of both private and public land.

In essence, the greatest threat to our sport, is all around us. Which leaves us with one logical choice. When we snowmobile, we must always ride responsibly.

The vast majority respect the law and the environment. Each of us must set an example for those who are new to the sport, young and old alike.

It is in every one's best interest to tread lightly into our recreational areas. Because, in the long run, to protect the sport we must preserve the environment.

Become informed. Obtain maps, regulations and other information from the Forest Service or from other public land agencies. Learn the rules and follow them and that goes for speed limits, too!

Avoid running over young trees, shrubs, and grasses and don't cut wood. On flatlands or areas where trail riding is popular, it's important to ride only where authorized. Remember, there is a link between protecting your environment and your own safety.

Respect wildlife and be particularly sensitive of animals that are rearing young or suffering from food shortage. Stress can sap scarce energy reserves. Refrain from riding in areas where only animals are intended to tread!

Obey gate closures and regulatory signs and remember, light treaders don't litter!

Stay out of wilderness areas. They're closed to all vehicles. Know where the boundaries are.

Obtain permission to travel across private land. Respect the rights of landowners and other people's privacy. Remember, snowmobile technology has lowered the noise factor considerably, but you still shouldn't rev your engines where quiet “is the order of the day”.

Snowmobilers know all too well the efforts that have been made throughout the sport's history to enjoy access to areas where people can snowmobile safely and responsibly. This effort continues today, as strong as ever.

Respecting the areas where we ride... wherever they may be... is the only way to ensure their future enjoyment. That's one major reason why we know you'll agree that Light Treading is smart sledding! And there are more.

Enjoying the opportunity to see winter and all its natural majestic wonders, is an experience cherished by snowmobilers. Light Treading will preserve this opportunity and will make it possible for us to expose others to the beauty of winter and the unique thrill of our sport! Light Treading will help our sport to grow!

Finally, Light Treading is the sign of a smart snowmobiler. You don't have to leave big tracks or careen through a virgin forest to show you can ride. So whether you're driving a high performance BRP snowmobile or any other make or model, show you know what you're doing. Show you know how to send snow flying and make tracks with a light touch!

BE A RESPONSIBLE RIDER

At BRP, we believe there's an opportunity for everyone in the power-sports and marine communities to come together and rethink how we approach safety, riding etiquette, and the environment. We believe that when we empower all riders to ride responsibly—to look out for each other and safeguard our trails and playgrounds—we inspire an industry to welcome newcomers, build a more caring community and generate positive experiences.

Whether you ride on trails, roads, water or snow, BRP is committed to driving positive change. That's why we're making the Responsible Rider program a key part of our Corporate Social Responsibility initiative through action, education and community empowerment.

To learn more about Responsible Rider, including tips and tricks on safety, riding etiquette and the environment, visit **brplynx. com/responsible-rider**. Or, use the following QR code.

It's time to take action! Join BRP, our fellow ISMA members and the entire snowmobiling community - including BRP President and CEO José Boisjoli - in taking the pledge to preserve access to our favorite winter playgrounds and snowmobile trails. You can sign the pledge at **snowmobilerspledge.org**

SAFETY INFORMATION

⚠ WARNING

Disregarding any of the safety precautions and instructions contained in this section could cause injury including the possibility of death.

Operating Age and Ability

Operators must be qualified. Make sure the operator is 16 or older. Your state (or province) may have additional requirements. Laws regarding the minimum age and licensing requirements vary from one jurisdiction to another. Be sure to contact the local authorities for information regarding the legal operation of a snowmobile in the intended jurisdiction of use. BRP highly recommends that you take a safety riding course. Basic training is required for the safe operation of any snowmobile.

Operation of this snowmobile with a disability that impairs vision, reaction time, judgment, or operation of the controls is not recommended. The safe use of your snowmobile depends on many conditions such as visibility, speed, weather, environment, traffic, vehicle condition and the condition of the operator. The performance of some snowmobiles may significantly exceed that of other snowmobiles you have operated. Therefore, use by novice or inexperienced operators is not recommended.

Each passenger must be able to simultaneously place both feet firmly flat against each footboard when properly seated.

Drugs and Alcohol

Never ride after consuming alcohol or drugs. Riding on a snowmobile requires the operator and passenger (s) to be sober, attentive and alert. The use of drugs and alcohol, singly or in combination, increases reaction time, impedes judgment, impairs vision, and inhibits your ability to safely ride on a snowmobile.

Avalanche Safety Training Courses

We recommend that all mountain riders take a local avalanche safety training course to become more familiar with snow conditions and learn how to properly use their equipment. Here are some web sites that can help you finding important information:

– – US: www.avalanche.org
– – Europe: www.avalanches.org
– – Canada: www.avalanche.ca

Protective Gear

Proper snowmobile clothing should be worn by all riders. It should be comfortable and not too tight. Always check the weather forecast before going on a ride. Dress for the coldest weather expected. Thermal underwear next to the skin also provides a good insulation.

Always wear an approved helmet at all times for safety and comfort. They provide both warmth and reduce injury. A stocking type cap, balaclava and face mask should always be carried or worn. Goggles or a face shield that attach to the helmet are indispensable.

Hands should be protected by a pair of snowmobile gloves or mitts which have sufficient insulation and allow use of thumbs and fingers for operation of controls.

Rubber bottom boots with either a nylon or a leather top, with removable felt liners are best suited for snowmobiling.

You should keep yourself as dry as possible when snowmobiling. When you come indoors, take your snowmobile suit and boots off and make certain they dry properly.

Do not wear a long scarf or loose apparels that could get caught in moving parts.

Carry colored lens goggles.

Required Equipment

As the owner of the snowmobile, you are responsible for ensuring that all required safety equipment is aboard. Check your local regulations about requirements.

First aid kit	Provided tool kit
Mobile phone	Knife
Spare spark plugs	Flashlight
Adhesive tape (duct tape)	Trail map
Spare drive belt	Snack
Probe*	Shovel*

Avalanche bag*	-
*When riding in an area with avalanche risk	

GET FAMILIAR WITH THE SNOWMOBILE

This vehicle may exceed the performance of other vehicles you may have ridden. Take time to familiarize yourself with your new vehicle.

Inexperienced riders may overlook risks and be surprised by vehicle's specific behavior and terrain conditions. Ride slowly. Excessive speed and reckless driving can kill.

Make sure you read and understand the content of this operator's guide to become completely familiar with the controls and operation of the snowmobile before embarking on your first trip or taking on a passenger(s). If you have not had the opportunity to do so, practice driving solo in a suitable traffic-free area to become accustomed to the feel and response of each control.

It is very important to inform any operator, regardless of his experience, of the handling characteristics of this snowmobile. The snowmobile configuration, such as ski stance, ski type, suspension type, track length, width and type vary from a model to another. The snowmobile handling is greatly influenced by these characteristics.

Track Propulsion System

Your snowmobile features a track propulsion system. The track grips on the snow-covered surface and pushes the snowmobile in the opposite direction of the force applied on the surface. Stay away from the track. Personal injury will result if contact is made with the revolving track.

⚠ WARNING

Never stand behind or near a rotating track. Debris could be projected causing severe injuries.

The grip of the track will vary depending on the surface conditions. The grip may be reduced on hard-pack snow or ice. Reduce your speed and allow more space to turn. Refer to the *TRACTION ENHANCING PRODUCTS* subsection of this guide to learn how to balance the grip of the ski vs the grip of the track. If the front and rear of the snowmobile are out of balance due to an incorrect combination of traction enhancing products, the snowmobile may tend to oversteer or understeer, which could lead to a loss of control.

Steering

Skis are used to steer the snowmobile through the handlebar. The performance to steer will vary depending of the grip of the skis on the surface. Steering control ability may be reduced on hard-pack snow, ice or roads. Reduce speed and allow more space to turn. Refer to the *TRACTION ENHANCING PRODUCTS* subsection of this guide to learn how to balance the grip of the ski versus the grip of the track. If

the front and rear of the snowmobile are out of balance due to an incorrect combination of traction enhancing products, the snowmobile may tend to oversteer or understeer, which could lead to a loss of control.

Riding with a passenger or when carrying loads, the steering control will also be reduced. Reduce speed and allow more space to turn.

Tether Cord

Always attach tether cord eyelet to clothing before starting the engine to help ensure the engine stops should the operator fall off.

After riding, always remove the tether cord from the engine cut-off switch to avoid unauthorized use by children or others and to prevent starting in a closed environment (ex: garage).

Braking

Braking performances may vary suddenly under certain conditions. Always remember that the snowmobile braking distance may be affected when riding with a passenger and when loaded with cargo at the rear. Never jam the brake and lock the track. Be sure to use restraint in braking to keep from blocking the track in order to avoid surprises that could lead to a loss of control.

Using studs on the track will give you better braking capacity on packed snow or ice but will have no noticeable effect on soft snow. Refer to *Enhancing Traction Control Products* subsection for track studding application.

Parking Brake

Always engage parking brake before starting the engine. Parking brake should be used whenever snowmobile is parked.

Make sure parking brake is fully disengaged before operating the snowmobile. When you ride the vehicle, brake pads that are caused to drag by a continuous pressure on the lever may cause damage to the brake system and cause loss of braking capacity or fire.

Carrying Loads

Carrying loads affects the vehicle handling, stability and braking distance. Appropriate loading and weight distribution are therefore important.

When carrying loads it is very important to follow the recommendations:

- Never exceed the maximum cargo capacity. Refer to *Safety Information on the Vehicle* or *Technical Specifications* subsections for the applicable cargo load capacity of your snowmobile.
- Always adjust the suspensions according to the cargo load. Refer to *Tune Your Ride* subsection for more details.
- Never carry a load unless it is properly secured using a BRP LinQ certified accessory. Compatible accessories which are not BRP certified may not be considered as fit for this purpose.
- Always reduce your speed, turn gradually and allow longer braking distance when carrying loads.

⚠ WARNING

Failure to follow these recommendations when carrying or towing loads could lead to a loss of control and possibly in a tip over.

Towing Loads

Towing loads affects the vehicle handling, stability and braking distance. Appropriate loading and weight distribution are therefore important.

When towing a load it is very important to follow the recommendations:

- Always use a rigid tow bar to tow a cargo carrier or an accessory.
- Never tow a load using a rope. Using a rope would result in a collision between the load and the snowmobile and possibly in a tip over in case of a rapid deceleration or on a downward slope.
- Never tow a load by attaching it directly to the bumper. Use only the hitch to tow a load. Make sure that the cargo carrier hitch is compatible with the one on the vehicle. Use security chains or cables to secure the cargo carrier with the vehicle. Avoid excessive slack in the chains or cables, it could break and snap back.
- Never exceed the vehicle maximum tow capacity. Refer to *Safety Information on the Vehicle* or *Technical Specifications* subsections for the applicable towing capacity of your snowmobile.
- Never exceed the tongue weight capacity, if applicable.
- Always make sure load is evenly distributed and safely secured on the cargo carrier. Make sure there is at least some weight on the tongue, if applicable.
- Always adjust the suspensions according to the weight on the tongue, if applicable. Refer to *Tune Your Ride* subsection for more details.
- Reduce your speed and turn gradually. Avoid hills and rough terrain. Riding this vehicle with a cargo carrier substantially increases the risk of toppling, especially on inclined slopes. Never attempt steep hills.

– Allow more distance for braking, especially on inclined surfaces and when a passenger is on board. Be careful not to skid or slide.
– Use caution when disconnecting a loaded cargo carrier; its load may topple on you or others.

⚠ WARNING

Failure to follow these recommendations when carrying or towing loads could lead to a loss of control and possibly in a tip over.

On vehicle equipped with a gearbox, always put the shift lever to L (low range) when towing a cargo carrier.

Any towed accessory should have reflectors on both sides and at the rear.

Check country transport regulations for brake light(s) requirements.

Towing Another Snowmobile

If a snowmobile is disabled and must be towed, in an emergency situation only, a rope can be used

– Remove the drive belt. Refer to *Maintenance Procedures* for more details.
– Attach the rope to the ski legs (spindles), **not** to the skis. If the ski legs are not accessible, attach the rope to the bumper.
– Have someone sit on the towed snowmobile to steer and activate the brake if needed.
– Tow at low speed with extra caution.

NOTICE

Always remove the drive belt of the snowmobile that is to be towed to prevent damage to its belt and drive system.

In some areas, it may be illegal to do so. Check with state or local authorities.

Accessories and Modifications

Any modifications or addition of accessories approved by BRP may affect the handling of your vehicle. It is important to take the time to get familiar with the vehicle once modifications are made to understand how to adapt your driving behavior accordingly.

Avoid installing equipment not specifically approved by BRP for the vehicle and avoid unauthorized modifications. These modifications

and equipment have not been tested by BRP and may create hazards. For example, they could:

- Create a loss of control and increase risk of crash
- Cause overheating or short circuits increasing the risk of fire or burn injuries
- Affect the protection features provided by the vehicle
- Affect the behavior of the trailer when the vehicle is transported
- Cause a risk of losing objects on the road when transported.

Your vehicle may also become illegal to ride.

Ask your authorized BRP dealer for suitable available accessories for your vehicle.

For safety reasons, some BRP accessories must be installed by a BRP dealer but if you decide to install the accessory by yourself, when not required to be done by the dealer, it is important to follow all the instructions carefully and, if applicable, understand all the information on how to use the product or for servicing.

If the accessory has been installed on your vehicle by another person than you, BRP strongly recommends you to read the corresponding instruction sheet as there may be more for information on how to use it safely or for the servicing.

The instruction sheets can be found at this address:

- *HTTPS://INSTRUCTIONS.BRP.COM*

Traction Enhancing Products

NOTE:
This section is applicable to all snowmobile models that are either equipped with a:

- Factory installed track approved by BRP for special studs installation.
- Factory pre-studded track.

or that can received one of these tracks.

Always refer to your authorized BRP snowmobile dealer to learn more on traction enhancing products and applicability on your snowmobile.

Using traction enhancing products such as, adjustable or more aggressive ski carbide runners and / or track studs on your snowmobile will change its behavior, particularly in terms of maneuverability, acceleration, and braking.

Using traction enhancing products gives a better grip on hard packed snow and ice, but has no noticeable effect in deep snow. For this reason, driving a snowmobile equipped with traction enhancing products

requires a certain adaptation period. If your snowmobile is equipped with traction enhancing products, be sure to take plenty of time to get used to the way it handles when turning, accelerating, and braking.

The use of track studs can increase the load and the stress on certain snowmobile components, as well as the vibration level. This can cause premature wear on parts such as belt, brake linings, bearings, chain, chain sprockets, and shorten track life.

Track studs can also cause serious damage to your snowmobile if it is not equipped with the appropriate tunnel protectors.

Check local regulations concerning the use of traction enhancing products on snowmobiles.

Studding an unapproved track or using unapproved studs increase the risk of the track tearing or severing

Installing track studs and tunnel protector(s) requires technical knowledge. To ensure safe and proper installation, BRP recommends to have the studs installed by your dealer.

For maintenance and replacement refer to *Track* in *Maintenance Procedures*.

Maneuverability

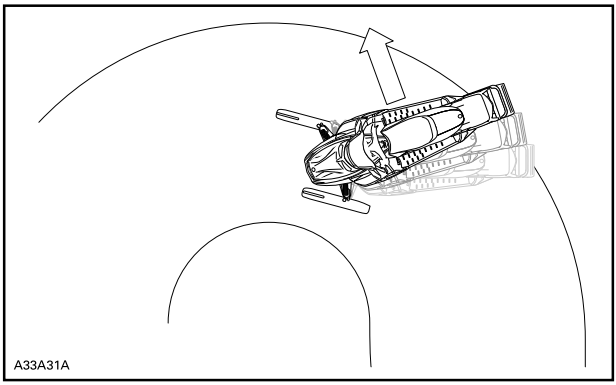
Using traction enhancing products such as, more aggressive ski carbide runners and/or studs makes the snowmobile grip the ground better at both the front and at the rear. The use of carbide runners is therefore required to give the skis a better grip, so that the front and rear of the snowmobile are in balance. While off-the-shelf carbide ski runners are adequate, they don't necessarily give you optimal control, since that depends on your personal preferences, your riding style, and how your suspension is adjusted.

⚠ WARNING

If the front and rear of the snowmobile are out of balance due to an incorrect combination of traction enhancing products, the snowmobile may tend to oversteer or understeer, which could lead to a loss of control.

Oversteering

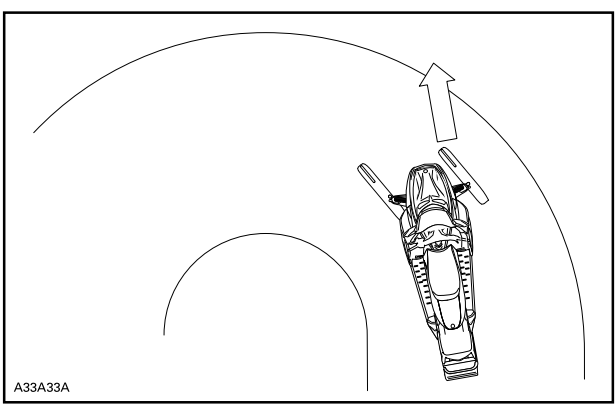
In certain conditions, using more aggressive ski carbide runners without studs on the rear track could make the snowmobile prone to oversteering, see illustration.



OVERSTEERING

Understeering

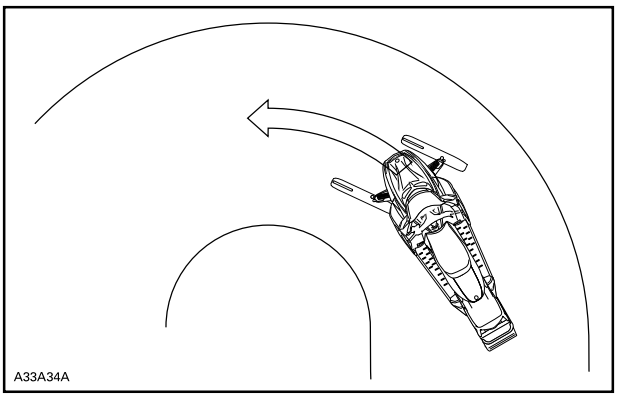
In certain conditions, the use of studs on the track could make the snowmobile prone to understeering if the skis are not equipped with more aggressive ski carbide runners, see illustration.



UNDERSTEERING

Controlled Driving

A balanced combination of carbide ski runners and studs on the track ensures adequate control and better handling, see illustration.



CONTROLLED DRIVING

Acceleration

Using studs on the track will allow your sled to accelerate better on packed snow and ice but will have no noticeable effect on soft snow. This can cause sudden variations in traction under certain conditions.

Always go easy on the throttle and never try to spin the track to make the rear of the snowmobile skid. This could cause debris or ice to be thrown violently backwards, possibly injuring others nearby or on snowmobiles behind you.

Braking

As in the case of acceleration, using studs on the track will give you better braking capacity on packed snow or ice but will have no noticeable effect on soft snow. Braking may thus vary suddenly under certain conditions. Be sure to use restraint in braking to keep from blocking the track in order to avoid surprises that could lead to a loss of control.

Rider Position (Forward Operation)

Your riding position and balance are the two basic principles of making your snowmobile go where you want it to. When turning on the side of a hill, you and your passenger must be ready to shift body weight to help it turn in the desired direction. Operator and passenger must never attempt this maneuvering by placing feet outside of the vehicle. Experience will teach you how much lean to put into turns at different speeds and how much you will have to lean into a slope to maintain proper balance.

Generally, the riding position for best balance and control is sitting. However, the posting, kneeling or standing positions are also used under certain conditions.

⚠ WARNING

Do not attempt any maneuvers if they are beyond your abilities.

Sitting

Feet on the running boards, body midway back on seat is an ideal position when operating the snowmobile over familiar, smooth terrain. Knees and hips should remain flexible to absorb shocks.

Posting

A semi-sitting position with the body off the seat and the feet under the body in a sort of squatting posture, thus allowing the legs to absorb the shocks when traveling over uneven terrain. Avoid abrupt stops.

Kneeling

This position is achieved by placing one foot firmly on the running board and the opposite knee on the seat. Avoid abrupt stops.

Standing

Place both feet on the running boards. Knees should be flexed to absorb the shock from surface bumps. This is an effective position to see better and to shift weight as conditions dictate. Avoid abrupt stop.

Rider Position (Reverse Operation)

When operating in reverse:

– Ensure the path behind is clear of obstacles or bystanders before proceeding in reverse.
– BRP recommends sitting on your snowmobile when operating in reverse.
– Avoid standing up. Your weight could shift forward against throttle lever while operating in reverse, causing an unexpected acceleration. Unexpected acceleration when snowmobile operates in reverse can cause a loss of control.

Fast reverse while turning, could result in loss of stability and control.

Riding with Passenger(s)

This vehicle is designed for one (1) operator and as many passengers as there are seats with straps or handholds installed on the vehicle conforming to SSCC standards. Passenger must only sit on designated passenger seat.

⚠ WARNING

– Never carry a passenger on a seat not approved by BRP.
– Never allow anyone to sit between the handlebar and the operator.

Even when a passenger is allowed, this person must be physically fit for snowmobiling.

Any passenger must always be able to firmly lay his feet on the footrests and keep his hands on the handholds or seat strap when seated. Respecting those physical criteria is important to ensure that the passenger is stable and to reduce the risks of ejection. Falls can result in severe injury or death.

The operator has a responsibility to ensure the safety of his passenger and should inform the passenger about snowmobiling basics.

Before riding the vehicle, adjust suspension according to weight. Refer to *Tune Your Ride* subsection for more details.

Ask your passenger to inform you to slowdown or stop immediately if he feels uncomfortable or insecure during the ride.

When going over bumps, riders(s) may raise their body slightly off the seat to absorb the shocks with their legs.

An unforeseen bump can leave you passenger-less. Remind your passenger to lean into the turn with you, without causing the vehicle to topple. Be extremely careful, go more slowly and check the passenger frequently. Keep a watchful eye on your passenger while riding.

Braking ability and steering control are reduced when riding with a passenger. Decrease speed and allow extra space to maneuver.

Riding Alone

Venturing out alone with your snowmobile could also be hazardous. You could run out of fuel, have an accident, or damage your snowmobile. Remember, your snowmobile is capable of traveling further in half an hour than you may be able to walk in a day. Use the “buddy system”. Always ride with a friend or member of your snowmobile club. Even then, tell someone where you are going and the approximate time you plan to return.

Riding in a Group

Before starting out, designate a “trail boss” to lead the party and another person to follow-up at the end of the party. Ensure that all members of the party are aware of the proposed route and destination. When riding with others, limit your abilities to the experience of others. Never overtake the trail boss or, for that matter, any other snowmobile. Use down-the-line hand signals to indicate hazards or intent of direction change. It’s important to keep a safe distance between each snowmobile but each one behind the leader should know the position of the machine ahead.

Light Signals

A light signal system can be installed on your snowmobile. Whether it is an OEM or after-sales system, it consists basically in a 2 colors LED light that signals you are followed by other riders, or you are the last rider. Last rider of the group does not mean that no other snowmobile from another group is coming. Always be careful.

Visit your BRP snowmobile dealer for more information.

MODE 1 : DEFAULT.	**WHITE** light
MODE 2 : CAUTION, RIDERS BEHIND ME.	**AMBER (LEFT SIDE ONLY)** light
MODE 3: BEWARE, I’M THE LAST SLED IN THE GROUP , OR ALONE.	**GREEN** light
MODE 4 : CAUTION, THERE’S A HAZARDOUS SITUATION, OR BEWARE, I’VE STOPPED.	**AMBER (BOTH SIDES FLASHING)** light

MOUNTED ON HANDLEBAR	MOUNTED ON WINDSHIELD

Avoiding Collisions

Wherever riding your vehicle always be on the look-out for the unexpected. Operate defensively. Scan constantly for people, objects, conditions and upcoming vehicles. In the trail, always stay on the appropriate side - as per country regulation - to avoid collision, especially when the field of vision is reduced. E.g.: Before a hilltop and a curve. Use extra caution whenever off-trail.

Always keep a safe distance from other snowmobiles and bystanders. Tailgating another snowmobile should be avoided. If the snowmobile in front of you slows for any reason, its operator and passenger could be harmed through your neglect. Maintain a safe stopping distance between you and the snowmobile in front of you. Depending on the terrain condition, stopping may require a little more space than you think. Play it safe. Be prepared to use evasive driving.

On land or water, fog or visibility-limiting snow can form. If you must proceed into the fog or heavy snow, do so slowly with your lights on and watch intently for hazards. If you are not sure of your way, do not proceed. Keep a safe distance behind other snowmobilers to improve visibility and reaction time.

Riding Behaviors

Injury or death may result to the snowmobile operator, passenger or bystander if the snowmobile is used in risky conditions which are beyond the operator's, passenger's or snowmobile's capabilities or intended use.

Remember, promotional material may show risky maneuvers performed by professional riders under ideal and controlled conditions. You should never attempt any such risky maneuvers if they are beyond your level of riding ability.

Jumping can be a hazardous situation. It requires practice and should be done in a known and controlled environment. Never attempt jumping in a trail. A loss of control could lead to an impact with different elements like rock or tree, or with another snowmobile. When jumping be prepared for landing to absorb the shock. Brace yourself for the impact and your knees must be flexed to act as shock absorbers.

Also, an uneven or mined surface in the trail could be enough to kick upward the snowmobile and generate an impact or a loss of control. When “gunning” the throttle, the vehicle digs into and leaves an irregular snow surface for others. So protect the other users by not spinning the track in the middle of the trail.

Speeding

Excessive speed and reckless driving can be fatal. Always adjust your speed according to snow conditions and circumstances. In many cases, you cannot react or respond quickly enough to the unexpected. Always ride at a speed which is suitable to the trail, weather conditions and your own ability. Know your local rules. Speed limit may be in effect and meant to be observed.

Moving Parts

Stay away from the track. Personal injury will result if contact is made with the rotating track.

To prevent serious injury to individuals near the snowmobile:

– Never stand behind or near a moving track
– Always use a wide-base snowmobile stand with a rear deflector panel if it is necessary to rotate track
– When the track is raised off the ground, only run it at the lowest possible speed. Centrifugal force could cause debris, damaged or loose studs, pieces of torn track, or an entire severed track to be violently thrown backwards out of the tunnel with tremendous force
– Never operate the engine without the belt guard securely installed
– Never operate the vehicle without the brake disk guard securely installed
– Never operate the vehicle with the side panels opened, or the hood removed

Know Terrain and Riding Variations

Groomed Trail

On a maintained trail, sitting is the most preferred riding position. Do not race and, above all, keep to the right hand side of the trail. Be prepared for the unexpected. Observe all trail signs. Do not zigzag from one side of the trail to the other.

Ungroomed Trail

Unless there has been a fresh snowfall you can expect “washboard” and snowdrift conditions. Taken at excessive speeds, such conditions can be physically harmful. Slow down. Hold on the handlebar and assume a posting position. Feet should be under the body assuming a crouched position to absorb any jarring effect. On longer stretches of “washboard” trails, the kneeling position of one knee on the seat can be adopted. This provides a certain amount of comfort, while at the same time keeps the body loose and capable of vehicle control. Beware of hidden rocks or tree stumps partially hidden by a recent snowfall.

Deep Snow

In deep “powder” snow, your vehicle could begin to “bog” down. If this occurs, turn in as wide an arc as possible and look for a firmer base. If you do get “bogged”, and it happens to everyone, do not spin your track as this makes the vehicle sink deeper. Instead, turn the engine off, get off and move the back of the vehicle onto new snow. Then tramp a clear path ahead of the vehicle. A few feet will generally suffice. Restart the engine. Assume the standing position and rock the vehicle gently as you steadily and slowly apply the throttle. Depending on whether the front or rear end of the vehicle is sinking, your feet should be placed on the opposing end of the running boards. Never place foreign material beneath the track for support. Do not allow anyone to stand in front of, or to the rear of, the snowmobile with the engine running. Stay away from the track. Personal injury will result if contact is made with the revolving track.

Frozen Water

Traveling frozen lakes and rivers can be fatal. Avoid waterways. If you are in an unfamiliar area, ask the local authorities or residents about the ice condition, inlets, outlets, springs, fast moving currents or other hazards. Never attempt to operate your snowmobile on ice that may be too weak to support you and the vehicle. Operating a snowmobile on ice or icy surfaces can be very dangerous if you do not observe certain precautions. The very nature of ice is foreign to good control of a snowmobile or any vehicle. Traction for starting, turning or stopping is much less than that on snow. Thus, these distances can be multiplied manyfold. Steering is minimal, and uncontrolled spins are an ever present danger. When operating on ice, drive slowly with caution. Allow yourself plenty of room for stopping and turning.

Slush

Slush should be avoided at all times. Always check for slush before starting across any lake or river. If dark spots appear in your tracks, get off the ice immediately. Ice and water can be thrown rearward into

the path of a following snowmobile. Getting a vehicle out of a slush area is strenuous and in some cases, impossible.

Uphill

There are two types of hills you can encounter — the open hill on which there are few trees, cliffs or other obstacles, and a hill that can only be climbed directly. On an open hill, the approach is to climb it by side hilling or slaloming. Approach at an angle. Adopt a standing position with both feet on the same running board. Keep your weight on the uphill side at all times. Maintain a steady, safe speed. Continue as far as you can in this direction, then switch to an opposite hill angle and riding position.

A direct climb could present problems. Choose the standing position, accelerate before you start the climb and then reduce throttle pressure to prevent track slippage.

In either case, vehicle speed should be as fast as the incline demands. Always slow down as you reach the crest. If you cannot proceed further, don't spin your track. Apply the parking brake, turn the engine off, free the skis by pulling them out and downhill, place the rear of the snowmobile uphill, restart the engine, release the parking brake and ease it out with slow even throttle pressure. Position yourself to avoid tipping over, then descend.

Downhill

Downhill driving requires that you have full control of your vehicle at all times. On steeper hills, keep your center of gravity low and both hands on the handlebar. Maintain slight throttle pressure and allow the machine to run downhill with the engine operating. If a higher than safe speed is reached, slow down by braking but apply the brake with frequent light pressure. Never jam the brake and lock the track.

Side Hill

When crossing a side hill or traversing up or downhill, certain procedures must be followed. All riders should lean towards the slope as required for stability. The preferred operating positions are the standing position, with both feet on the running board that is facing uphill. Be prepared to shift your weight quickly as needed. Side hills and steep slopes are not recommended for a beginner or a novice snowmobiler.

Avalanche Hazard

When riding on mountainous terrain, you should be aware of the risk of avalanches. Avalanches vary in size and shapes and generally occur in steep terrain and on unstable snow.

New snow, animals, people, wind and snowmobiles can all trigger an avalanche. Avoid high marking or traversing steep terrain when

avalanche conditions are possible. When in unstable snow conditions, travel should be restricted to lower angle slopes. Wind formed cornices should be avoided. Staying off unstable conditions is the key to safe mountain riding. Probably most important is to be aware of the conditions and dangers on a daily basis when in the mountains. Check local avalanche forecasts and threats each day before heading out to ride and heed forecasters advice.

You should always carry a snow shovel, probe and avalanche beacon while riding on mountains.

Bright Sunshine

Bright sunny days can considerably reduce your vision. The glare from sun and snow may blind you to the extent that you cannot easily distinguish ravines, ditches or other obstacles. Goggles with colored lenses should always be worn under these conditions.

Night Rides

The amount of natural and artificial light at a given time can affect your ability to see or to be seen. Be extra cautious. Drive at speeds that will allow you to stop in time when you see an unknown or dangerous object ahead. Stay on established trails and never operate in unfamiliar territory. Be sure both headlights and taillight are working and clean.

Unfamiliar Territory

Whenever you enter an area that is new to you, drive with extreme caution. There may be obstructions hidden beneath the snow. Go slow enough to recognize potential hazards such as fences or fence posts, brooks crossing your path, rocks, sudden dips, guy wires and countless other obstacles which could result in a termination of your snowmobile ride.

Driving off established trails and in the woods requires reduced speed and increased vigilance. Driving too fast in an area can make even minor obstacles very hazardous. Even hitting a small rock or stump could throw your snowmobile out of control and cause injury to its riders. Even when following existing tracks, be cautious. Travel at a speed so you can see what is around the next bend or over the top of the hill.

Hidden Wires

Always be on the lookout for hidden wires, especially in areas that may have been farmed at one time or another. Too many accidents have been caused by running into wires in the fields, guy wires next to poles and roads, and into chains and wires used as road closures. Slow speeds are a must.

Riding Uneven Surfaces

Unplanned jumps of snowdrifts, snowplow ridges, culverts, indistinguishable objects or sudden drop in the trail can be dangerous. You can avoid them by wearing the proper color lenses or face shields and by operating at a lower speed.

A good way to help seeing these terrain variations is to wear the proper color lenses or face shields and by operating at a lower speed. Crouch (stand) towards the rear of the vehicle and keep the skis up and straight ahead. Apply partial throttle and brace yourself for the impact. Knees must be flexed to act as shock absorbers.

Road Crossing

Your snowmobile is not designed to operate or turn on pavement of public streets, roads or highways. Avoid road traveling. If you must do so, and it is permitted, reduce speed and stay on the edge of the way where you can find snow to help providing capabilities to maintain directional control.

As snowmobile trails often cross roadways it is important for riders to know the proper crossing procedures. When approaching a roadway, signal to others that you are stopping at the intersection and slowly come to a complete stop back from the road's edge. In some cases, you will be approaching the road from a ditch or snowbank. Choose a place where you know you can climb without difficulty. Stop completely at the top of the bank and wait for all traffic to clear. Then, look carefully in both directions before crossing at a 90° angle. If needed, assume a standing position to look both ways. Be wary of parked vehicles. When you are certain that the road is clear proceed straight across the intersection without hesitation. Each rider needs to come to a complete stop, look both ways and then proceed when the roadways is clear of oncoming traffic.

Railroad Crossing

Never ride on railroad tracks. It is illegal. Railroad tracks and railroad rights-of-way are private property. A snowmobile is no match for a train. Before crossing a railroad track, stop, look and listen.

Respect of the Wildlife

Wildlife compliments your snowmobiling day. Snowmobile tracks provide firm ground over which animals can travel from area to area. Do not violate this privilege by chasing or harassing wildlife. Fatigue and exhaustion can lead to animal's death. Avoid areas posted for the protection or feeding of wildlife. If you happen to be fortunate enough to see an animal, stop your snowmobile and observe quietly.

Carbon Monoxide (CO) Poisoning

All engine exhaust contains carbon monoxide (CO), a deadly gas. Breathing carbon monoxide can cause headaches, dizziness, drowsiness, nausea, confusion and eventually death.

Carbon monoxide is a colorless, odorless, tasteless gas that may be present even if you do not see or smell any engine exhaust. Deadly levels of carbon monoxide can collect rapidly, and you can quickly be overcome and unable to save yourself. Also, deadly levels of carbon monoxide can linger for hours or days in enclosed or poorly ventilated areas.

If you experience any symptoms of carbon monoxide poisoning, leave the area immediately, get fresh air and seek medical treatment.

To prevent serious injury or death from carbon monoxide:

– Never run the vehicle in poorly ventilated or partially enclosed areas such as garages, carports or barns. Even if you try to ventilate engine exhaust with fans or open windows and doors, carbon monoxide can rapidly reach dangerous levels.
– Never run the vehicle outdoors where engine exhaust can be drawn into a building through openings such as windows and doors.
– Never stand next to the vehicle while the engine is running. A person standing next to the vehicle when the engine is running may inhale high concentrations of exhaust fumes.

After riding, always remove the tether cord from the engine cut-off switch to avoid unauthorized use by children or others and to prevent starting in a closed environment (ex: garage).

Gasoline Fires and Other Hazards

Gasoline is extremely flammable and highly explosive. Fuel vapors can spread and be ignited by a spark or flame many feet away from the engine. To reduce the risk of fire or explosion, follow these instructions:

– Use only an approved gasoline container to store fuel.
– Strictly adhere to instructions in *Vehicle Fueling Procedure*.
– Never start or operate the engine if the fuel cap is not properly installed.
– Use only a BRP approved LinQ fuel caddy to carry extra fuel on the vehicle. It should be properly installed and secured.

Gasoline is poisonous and can cause injury or death.

– Never siphon gasoline by mouth.
– If you swallow gasoline, get any in your eye or inhale gasoline vapor, visit your doctor immediately.

– If gasoline is spilled on you, wash your skin thoroughly with soap and water and change your clothes. To clean your gasoline-contaminated clothes, air them out to let the fuel evaporate and hand wash before air-drying. Do not use a washing machine or a dryer before the gasoline has been removed to avoid any risk of fire.

Burns from Hot Parts

Certain components may become hot during operation. Avoid contact during and shortly after operation to avoid burns.

PRACTICE EXERCISES

Practice alone the following exercises after having done the entire Pre-ride inspection. Always start and stop the engine according to the instructions in *ENGINE STARTING PROCEDURE* and *SHUTTING OFF THE ENGINE* in *BASIC PROCEDURES*. Don't forget to attach the tether cord to your jacket.

Where to Practice Exercises

Find a suitable area to practice the exercises. Ensure the area meet the following requirements:

– No traffic
– No obstacles
– Hard packed snow
– Ample space to maneuver.

Exercises to Practice

Practice alone the following exercises after having done the entire Pre-ride inspection. Always start and stop the engine according to the instructions in *ENGINE STARTING PROCEDURE* and *SHUTTING OFF THE ENGINE* in *BASIC PROCEDURES*. Don't forget to attach the tether cord to your jacket.

Using the Emergency Engine Stop Switch

Purpose: Become familiar with the operation of throttle lever and to become familiar with using the engine stop switch.

Directions:

– With the parking brake engaged, start the engine and let idle until it reaches the operation temperature.
– Use the engine stop switch to shut the engine off. Press the switch with your right thumb while keeping your hand on the handgrip.
– Restart the engine and repeat the exercise. No idle time is required.

Tips for additional practice:

– Press the emergency engine stop switch without looking at it.

Starting, Stopping and Basic Handling

Purpose:

– Learn throttle control and how to get the vehicle moving.
– Become familiar with low speed deceleration and braking.

If you feel like you are losing control while doing this exercise, release the throttle to stop accelerating and apply the brake as needed to slow down. You can also use the engine stop switch to cut power entirely.

Directions: At first, you will only use the throttle for a moment at a time, then release it and coast.

– Start the engine and release the parking brake lever.
– Slowly apply throttle until the vehicle starts to creep forward. As soon as you start moving release the throttle and coast, then press the brake lever to stop.
– Continue with this part of the exercise until you are comfortable with applying and releasing the throttle.

Engine Stop While in Motion

Purpose: Become familiar with using the emergency engine stop switch when in motion so you know how the vehicle will react if you need to use it later.

Directions:

– Partway down the straightaway, while operating at 8 km/h (5 MPH), toggle the engine stop switch to OFF position and coast to a stop.
– Restart the engine and repeat the exercise. Try increasing your speed (to a maximum of 20 km/h (12 MPH) before using the engine stop switch.

In an emergency, the snowmobile engine can be stopped by pressing down on the emergency engine stop switch or by pulling the tether cord cap from the engine cut-off switch, while applying brake.

Basic Turns

Purpose: Get comfortable turning in a controlled manner on both sides.

Directions:

– Roll in a straight line at low speed and make a wide arcing turn. Make sure there is enough space to perform the entire turn.
– Repeat right and left turns and maintain a steady speed bellow 8 km/h (5 MPH). Hold the throttle to maintain your low speed.
– Leaning forward and into the curve may help you to turn the handlebar more easily.

Quick Stops

Purpose:

– Become familiar with the vehicle braking ability.
– Learn to apply brakes with maximum efficiency.

This exercise is like what you did before, except you'll be applying the brake more firmly, working up to braking at the maximum without locking the track rotation. Always release the throttle completely for quick stops. If you apply throttle and brake at the same time, your stopping distance will be longer.

Directions:

– Start at one end of the straightaway and accelerate to 8 km/h (5MPH). Partway down the straightaway, release the throttle completely and brake quickly.
– Keep head and eyes up, keep handlebar straight, and do not release the brake until fully stopped.
– Repeat, increasing your speed and braking harder. When you feel that the rotation of the track will be stopped you need to release the pressure on the break lever. To maintain control, you need to keep the track in rotation.

Operating in Reverse

Purpose: Become familiar with the vehicle handling and turning radius in reverse.

Directions:

– Shift into reverse and remain seated. Refer to *SHIFTING IN REVERSE* in *OPERATING THE VEHICLE*.
– Check that the area behind you is clear. While looking backwards, slowly reverse and stop by releasing throttle and using the brake, just like when operating normally.
– Keep your speed low and do not back up for long distances.
– Repeat the reverse and stop in straight line until you get comfortable.
– Once you are comfortable with reversing in straight line, you can slowly reverse while turning the handle bar.

TRANSPORTING THE VEHICLE

Make sure that oil reservoir and fuel tank caps are properly installed.

Many type of trailer can be used to transport a vehicle. Tilt-bed, flatbed or enclosed trailers, no matter the trailer used, always proceed with precaution when driving the vehicle on and off of it.

Always anchor the vehicle securely, front and rear, even on short hauls. Use appropriate tie-down straps only. Make sure all equipment is securely fastened. Cover the vehicle to prevent road grime from causing damage.

Make sure the trailer meets state or provincial requirements. Ensure the hitch and safety chains are secured, and the brake, turn indicators and clearance lights are functional.

⚠ WARNING

Make sure all seats, accessories and cargo are properly secured, or remove it to prevent from falling on the road and creating a hazard for following vehicles.

⚠ WARNING

Do not tow the vehicle facing backwards. If the vehicle is towed facing backwards, the wind may cause damage to the windshield or even loss of the windshield.

IMPORTANT ON-PRODUCT LABELS (ALL COUNTRIES EXCEPT CANADA/UNITED STATES)

This vehicle comes with a hang tag and labels containing important safety information.

Any person who rides this vehicle should read and understand this information before riding.

Vehicle Safety Labels

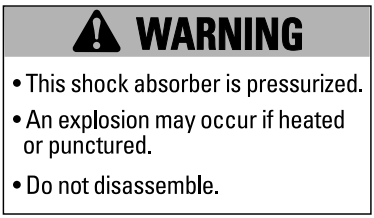
These labels are affixed to the vehicle for the safety of the operator, passenger or bystanders.

The following labels are on your vehicle and they should be considered permanent parts of the vehicle. If missing or damaged, the decals can be replaced free of charge. Visit an authorized BRP snowmobile dealer.

NOTE:
In the event of any discrepancy between this guide and the vehicle, the safety labels on the vehicle have precedence over the labels in this guide.

Shock Absorber - Warning Label

This label is applied directly on the shock absorber.



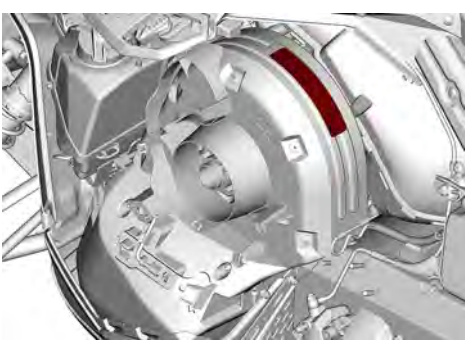
Pulley Guard and Drive Pulley Tightening Torque - Warning and Notice Label

⚠ WARNING

This guard must ALWAYS be in place when engine is running. Beware of rotating parts, they could cause injuries or catch your clothing.

NOTICE

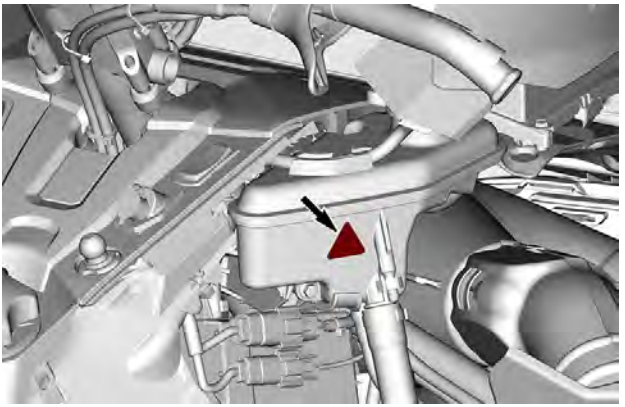
- **Drive pulley bolt recommended torque is 115 to 125 Nm (85 to 92 lbf-ft).**
- **Not applying the recommended torque may result in a major failure of the drive pulley and the engine.**
- **Refer to the service manual for the complete assembly procedure.**



Do Not Open When Hot - Warning Label

Do Not Open When Hot - Warning Label

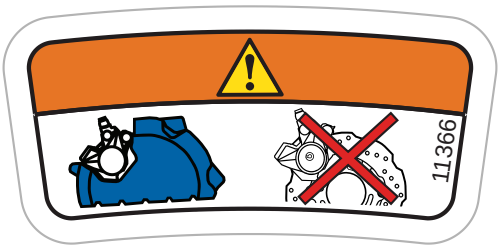
⚠ WARNING
Do not open when hot.

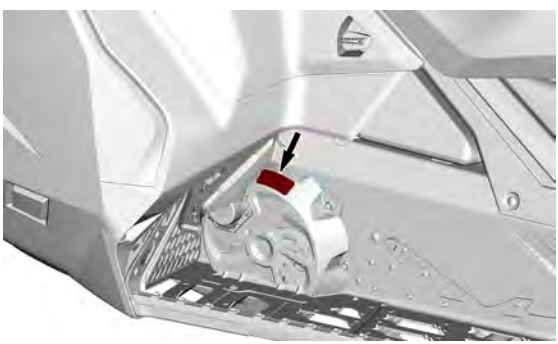


Disk Guard - Warning Label

⚠ WARNING

This guard must ALWAYS be in place except when servicing.

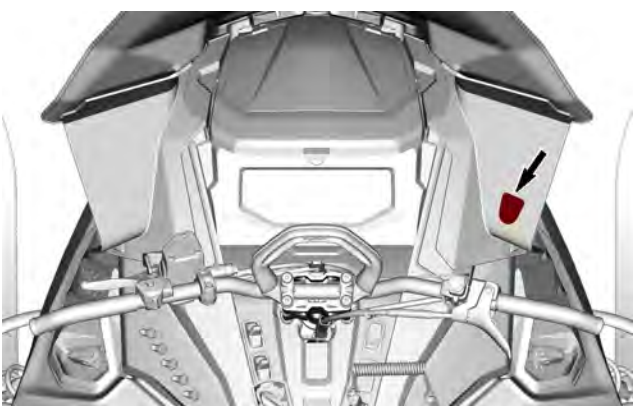




Correct Towing Direction - Warning Label

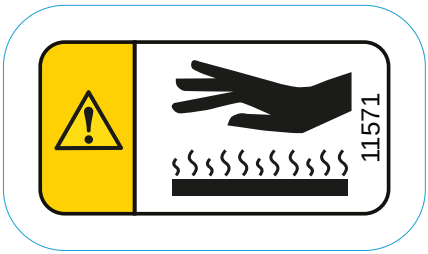
⚠ WARNING

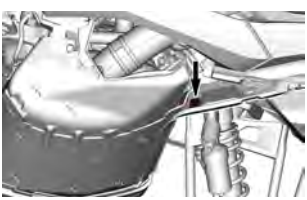
- **ALWAYS tow this vehicle facing forward.**
- **NEVER tow this vehicle facing backward. Windshield could detach and become a road hazard.**



Beware of Hot Parts - Caution Label

⚠ CAUTION
Beware of hot parts.





Starting Procedure - Warning Label

⚠ WARNING

- **Read and understand all safety labels, locate and read the operator's guide and watch the safety video (using the QR code link or visit Lynx web site) before operation.**
- **Respect laws on minimum operator age. Manufacturer recommends a minimum operating age of 16 years old.**
- **ALWAYS wear ear protection.**
- **Get familiar with your vehicle. Inexperienced riders may overlook risks and be surprised by vehicle's specific behavior and terrain conditions. Ride slowly.**
- **Excessive speed and reckless driving can kill.**
- **ALWAYS adjust your speed according to snow conditions and circumstances.**
- **Steering control and braking ability may be reduced on hard-pack snow, ice or roads. Reduce speed & allow more space to stop or turn.**
- **Never open side panels or hood while engine is running or if vehicle is in motion. Ensure to remove tether cord from post before opening those.**

Before starting

1. **Attach tether cord to your clothing.**
2. **Turn handlebars all the way in both directions to check for interference and insure free operation.**
3. **Check proper operation of the throttle and brake levers each time before starting. They must return to their initial position when released.**
4. **Apply parking brake.**

After Starting:

1. **Push in the emergency engine stop switch to check if engine shuts off.**
2. **Re-start and pull-out tether cord to check if engine shuts off.**
3. **Re-start. Disengage parking brake before riding to avoid brake fading.**

Passenger Safety - Warning Label

⚠ WARNING

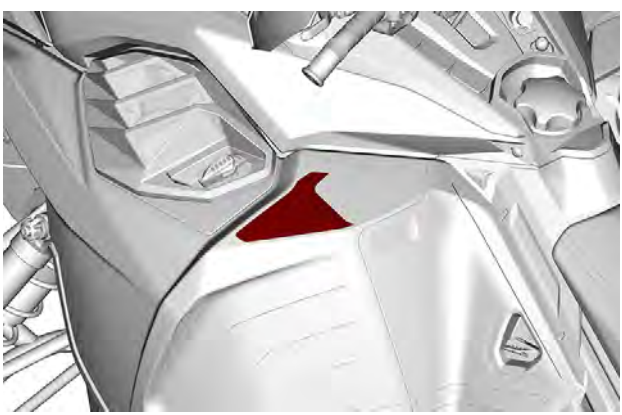
Remember: you are responsible of the safety of your passenger.
All drivers and passengers must read the following:

- **16 years old is the minimum age required to drive this vehicle.**
- **Use extra caution whenever off-trail.**
- **Avoid thin ice/ open water.**
- **Never ride under the influence of alcohol or drugs, even as passenger.**

When riding with a passenger:

- **Braking ability and steering control are reduced.**
- **Decrease speed and allow extra space to maneuver.**
- **Adjust suspension according to weight.**

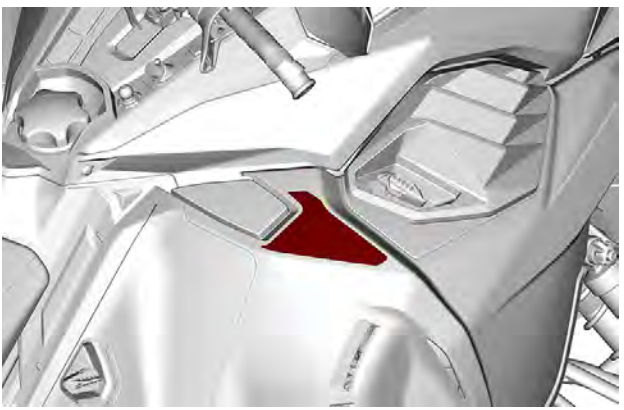
516013183
16+
2



Passenger Safety - Warning Label

⚠ WARNING

This vehicle is design for one (1) operator and as many passengers as there are seats with straps or handgrips installed on the vehicle conforming to SSCC standards.



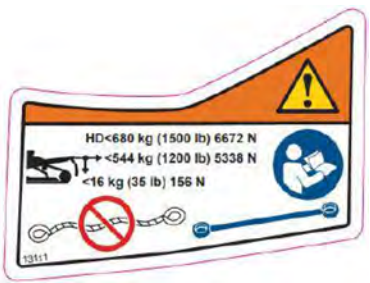
Maximum Cargo Load – Warning Label

⚠ WARNING
– NEVER sit in cargo area. – Exceeding maximum cargo may affect steering control, braking ability and cause permanent damage. – MAXIMUM cargo load: 61 kg 601 N)

Towing Capacity - Warning Label

⚠ WARNING

- **Towing may affect steering control and stability.**
- **- Always use a securely fastened tow bar, reduce your speed and respect maximum towing weight:**
  - **Stock: 544 kg (5338 N)**
  - **HD Bumper: 680 kg (6672 N)**



Rotating Track — Warning Label

⚠ WARNING

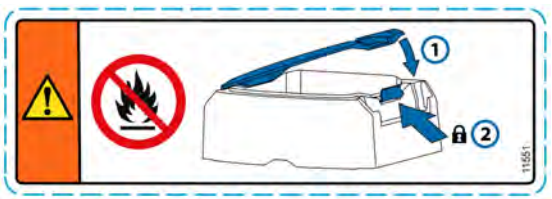
-NEVER stand behind or near a rotating track. Debris could be projected causing severe injuries. To remove packed snow/ice, stop engine, lift and hold vehicle on the side and use wrench tool on the belt guard.
- NEVER sit in cargo area.

Rear Storage Compartment - Warning Label

⚠ WARNING

To reduce the risk of severe injury or death:

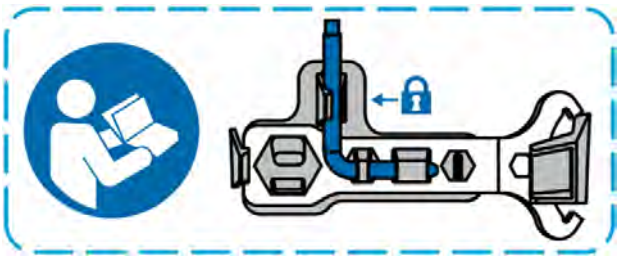
- **Never carry flammable or dangerous liquids inside cargo box. If ignited, this can lead to an explosion.**
- **Make sure the cover is closed and latched before riding.**



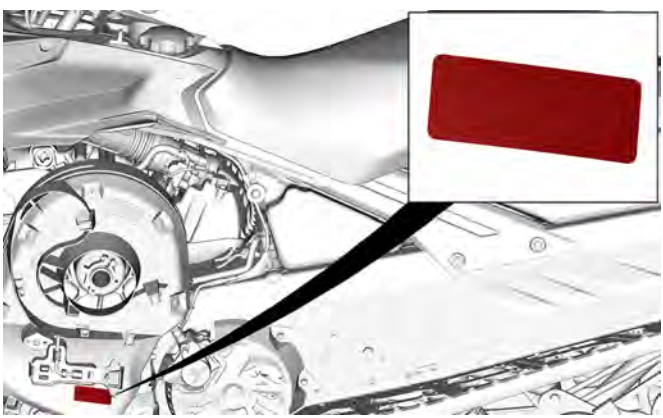
Technical Information Labels

Adjustment Tools Label

– Install suspension adjustment tool first. (Illustrated red on label)
– Install pulley expander and Headlight adjustment tool second. (Illustrated blue on label)
– Refer to *Tools* in *Equipment*.



ADJUSTMENT TOOLS



TYPICAL

Recommended Fuel — Notice Label

Refer to the *Technical Specifications* for appropriate fuel type for your vehicle engine.

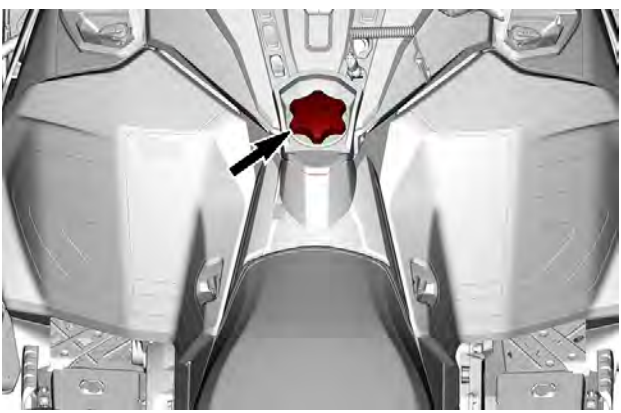
RON OCTANE RATING - NOTICE LABEL



PRE-RIDE INSPECTION

Perform a pre-ride inspection before each ride to detect potential problems during operation. The pre-ride inspection can help you monitor wear and deterioration before they become a problem. Correct any problems that you discover to reduce the risk of an accident or a malfunction.

Before Starting the Engine

1. Remove snow and ice from body including lights, seat, footrests, controls and instruments.
2. Remove packed snow and ice from the rear suspension using the wrench tool stored on the drive belt guard.
3. Verification of the air intake system
   - Verify that the air silencer pre filter is free of snow
   - Verify that the air silencer pre filter membrane is not damaged and free of holes or cracks. In case there is damage or hole in the filter, do not start the unit and see your dealer for a proper entire inspection of the intake system together with pre filter exchange.
4. Verify that skis and steering operate freely. Check corresponding action of skis versus handlebar.
5. Check fuel and injection oil for levels and leaks. Replenish if necessary and in case of any leaks; you should seek service from an authorized BRP snowmobile dealer, repair shop, or person of your own choosing for maintenance, repair, or replacement.
6. All storage compartments must be properly latched and they must not contain any heavy or breakable objects. Hood and side panels must be also properly latched.
7. Activate the throttle control lever several times to check that it operates easily and smoothly. It must return to idle position when released.
8. Activate the brake lever and make sure the brake fully applies before the brake control lever touches the handlebar grip. It must fully return when released.
9. Apply parking brake and check if it operates properly. Leave parking brake applied.
10. Inspect drive belt condition and height. Refer to *drive belt* in *maintenance procedures*.

After Engine is Started

For proper engine starting procedure, refer to the appropriate *Engine Starting Procedure*.

1. Check headlights high beam and low beam, taillight, stop light and pilot lamps operation.

NOTE:
You may need to detach tether cord from your clothes to check lights. In such a case, attach cord as soon as you get back at the controls of the snowmobile.

2. Check the engine cut-off switch (by pulling tether cord cap) and emergency engine stop switch operation.
3. Release parking brake.
4. Refer to *Vehicle warm up* and follow instructions.

Pre-Ride Check List

ITEM	OPERATION	✓
BODY INCLUDING SEAT, FOOTRESTS, LIGHTS, AIR FILTER, CONTROLS AND INSTRUMENTS	Check condition and remove snow or ice.	
SKIS AND STEERING COMPONENTS AND FUNCTION	Check for free movement and proper operation.	
SKI RUNNERS	Check for abnormal wear.	
FUEL	Check for proper level and no leaks.	
INJECTION OIL (IF APPLICABLE)	Check for proper level and no leaks.	
COOLANT	Check for proper level and no leaks.	
DRIVE BELT	Check for cracks, fraying or abnormal wear and proper height.	
THROTTLE LEVER	Check for proper operation.	
BRAKE LEVER	Check for proper operation.	
BRAKE COMPONENTS AND FUNCTION	Check for proper operation.	
BRAKE FLUID	Check for proper level and no leaks.	

STORAGE COMPARTMENT	Check for proper latching and no heavy or breakable objects.	
TRACK	Check condition and remove snow or ice. For studded tracks, refer to *Traction Enhancing Products*.	
SLIDER SHOES	Check for abnormal wear.	
EMERGENCY ENGINE STOP SWITCH AND ENGINE CUT-OFF SWITCH (TETHER CORD CAP)	Check for proper operation. Tether cord must be attached to operator clothing eyelet.	
LIGHTS	Check for proper operation.	
HORN BUTTON (IF EQUIPPED)	Check for proper operation.	

VEHICLE TRANSPORTATION

Make sure that oil reservoir and fuel tank caps are properly installed.

Tilt bed trailers can easily be equipped with a winch mechanism to afford maximum safety in loading. Simple as it may seem, never drive your snowmobile onto a tilt bed trailer or any other kind of trailer or vehicle. Many serious accidents have resulted from driving up and over a trailer. Anchor your vehicle securely, front and rear, even on short hauls. Be certain all equipment is securely fastened. Cover your snowmobile when trailering to prevent road grime from causing damage.

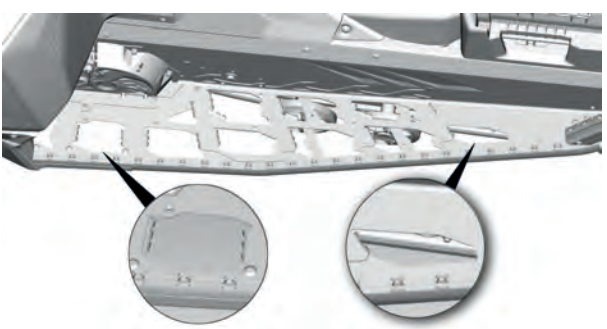
Be certain your trailer meets state or provincial requirements. Ensure the hitch and safety chains are secure and the brake, turn indicators and clearance lights all function.

⚠ WARNING

Do not tow the vehicle facing backwards. If the vehicle is towed facing backwards, the wind may cause damage to the windshield or even loss of the windshield.

It is recommended to use a minimum of 2 straps on each side of the vehicle.

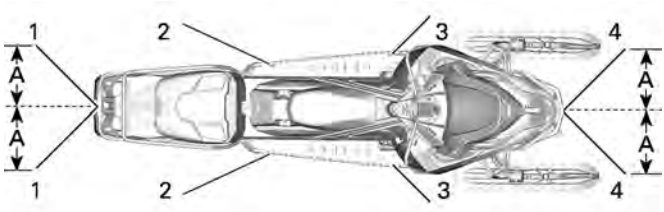
In the footboard, use only identified opening to tie the vehicle down.



TYPICAL

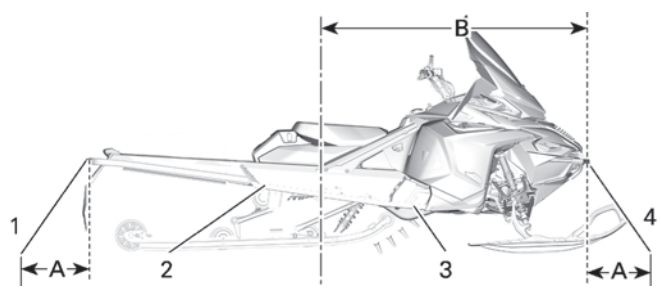
Do not tie vertically. A minimum distance of 0.3 m unless otherwise specified is required between strap attach point on vehicle and on the trailer or platform.

Maximum Lashing Point Forces				
1.	Forward	500 kg	Sideward	160 kg
2.	Forward	250 kg		
3.	Backward	250 kg		
4.	Backward	500 kg		



TYPICAL

1. Minimum distance of 0.5 m



TYPICAL

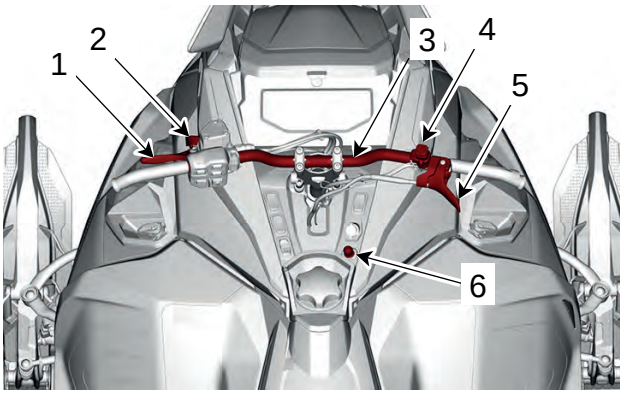
This page is intentionally blank

VEHICLE INFORMATION

PRIMARY CONTROLS

It is important to know the location and operation of all controls, and to develop and practice smooth and coordinated use of them.

Some features may not apply to your model or could be optional.



TYPICAL

1. *Brake Lever*
2. *Parking Brake Lever*
3. *Handlebar*
4. *Emergency Stop Switch*
5. *Throttle Lever*
6. *Engine Cut-off Switch*

Handlebar

The handlebar controls the steering of the snowmobile. As the handlebar is rotated to right or left, the skis are turned right or left to steer the snowmobile.

⚠ WARNING

Fast reverse while turning, could result in loss of stability and control.

Adjusting the Handlebar

⚠ WARNING

It is important that all controls must be fully accessible and easily usable by the person driving the vehicle at all times. Take time to adjust the vehicle to the driver before riding. The handlebar and the brake lever can be easily adjusted to meet each driver needs.

1. Loosen the four fasteners enough to easily rotate the handlebar from the upper support.

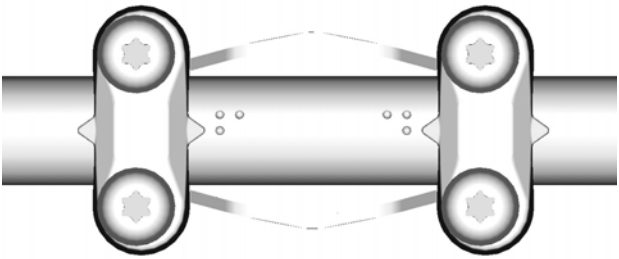
TYPICAL

Adjusting the Handlebar to the Rider's preferences

2. With the operator on the driver seat, rotate the handlebar in the desired position.
3. Before tightening the handlebar support fasteners, check that the handlebar is perfectly centered.

Adjusting the Handlebar to the factory setting

4. Position the handlebar with clamps, as per the following illustration.

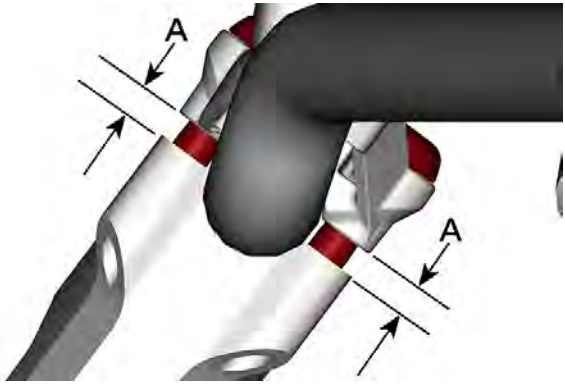


TYPICAL – POSITION 1

5. Before tightening the handlebar support fasteners, check that the handlebar is perfectly centered.
6. Tighten the four fasteners to specification.

Tightening Torque	
Clamp screws	24.5 ± 3.5 Nm (18 ± 3 lbf-ft)

7. Ensure the handlebar clamps are parallel with the extension.



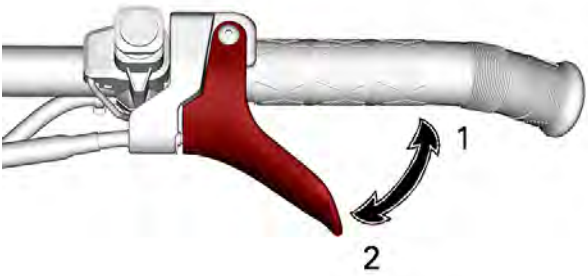
A. Must be equal on each side

8. Make sure the master cylinder cover is level.
9. Turn the handlebar completely from side to side making sure it does not exert unwanted tension on handlebar wires and cables.

Throttle Lever

Throttle lever is located on the RH side of handlebar.

Designed to be thumb activated. When squeezed, it increases the engine speed. When released, engine speed returns automatically to idle.



CABLE THROTTLE LEVER

1. To accelerate
2. To decelerate

⚠ WARNING

Test the throttle lever operation each time before starting the engine. The lever must return to the rest position once released. Otherwise, do not start engine.

Emergency Engine Stop Switch

The emergency engine stop switch is located on the RH side of handlebar.

To stop the engine in an emergency, push the switch down in OFF position and simultaneously apply the brake.

OFF POSITION

To allow engine starting, pull the switch up in ON position.

ON POSITION

All operators of the snowmobile should familiarize themselves with the function of the emergency engine stop switch by using it several times on first outing and whenever stopping the engine thereafter. This engine stopping procedure will become a reflex and will prepare operators for emergency situations requiring its use.

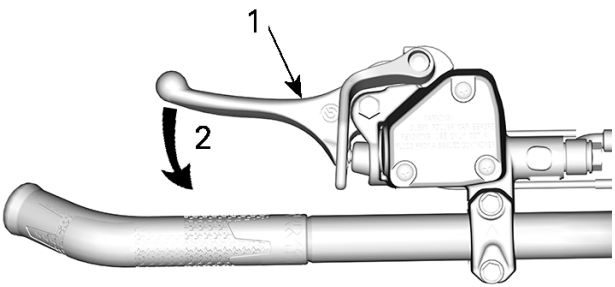
⚠ WARNING

If the switch has been used in an emergency caused by a suspected malfunction, the source of the malfunction should be determined and corrected before restarting engine. Visit an authorized BRP snowmobile dealer for servicing.

Brake Lever

Brake lever is located on the LH side of handlebar.

When squeezed, brake is applied. When released, it automatically returns to the rest. Braking effect is proportional to the pressure applied on the lever and to the type of terrain and its snow coverage.



TYPICAL

1. *Brake lever*
2. *To apply brake*

Adjusting the Brake Lever

⚠ WARNING

It is important to adjust the brake lever to the user size and normal riding position.

Proper brake lever position should allow:

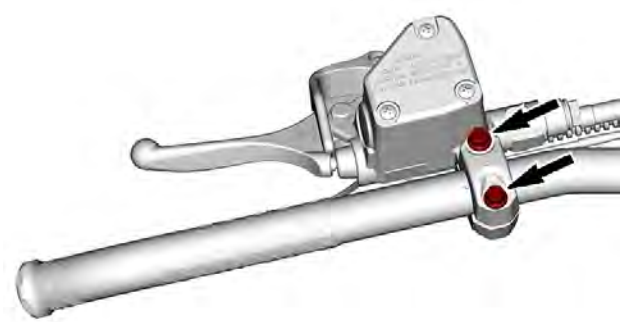
– Good support for the index and middle finger on the lever.
– Use the outer end of the lever to optimize the force.
– Proper wrist alignment.

Taking the time to adjust and try out the brake lever before your first snowmobile outing improves user comfort.

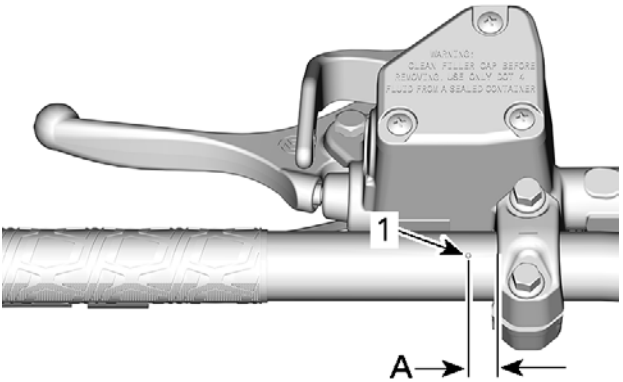
TYPICAL

1. Loosen the two bolts enough to easily move the brake lever on the handlebar.

NOTE:
If the two bolts are not loosen enough the brake lever can leave marks on the handlebar.



2. Locate the reference mark on the handlebar and respect the distance and rotation limits.



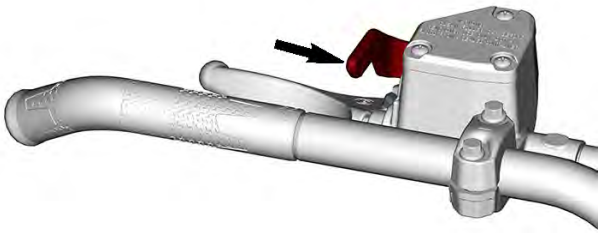
1. *Handlebar dot*
A. *0 to 5 mm (0 to 0.197 in) between the handlebar point and side of the brake lever*

3. With the operator on the driver seat, put the brake lever in the desired position.
4. When adjusted, tighten the bolts to specification.

TIGHTENING TORQUE	
Brake lever adjustment bolts	8.5 ± 1.5 Nm (75 ± 13 lbf-in)

Parking Brake Lever

Parking brake lever is located on the LH side of handlebar.



TYPICAL

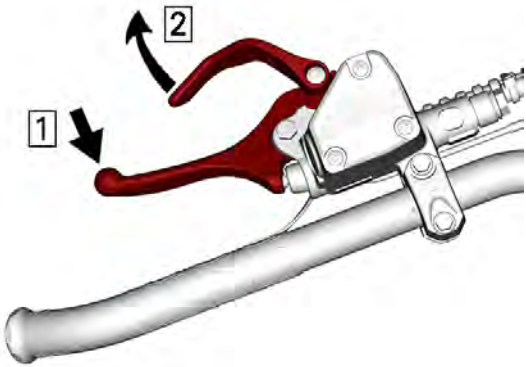
Parking brake should be used whenever snowmobile is parked.

⚠ WARNING

Make sure parking brake is fully disengaged before operating the snowmobile. When you ride the vehicle, brake pads that are caused to drag by a continuous pressure on the lever may cause damage to the brake system and cause loss of braking capacity and/or fire.

To Engage Parking Brake

Apply and hold brake, then lock brake lever using the parking brake lever as shown.



TYPICAL — ENGAGE MECHANISM

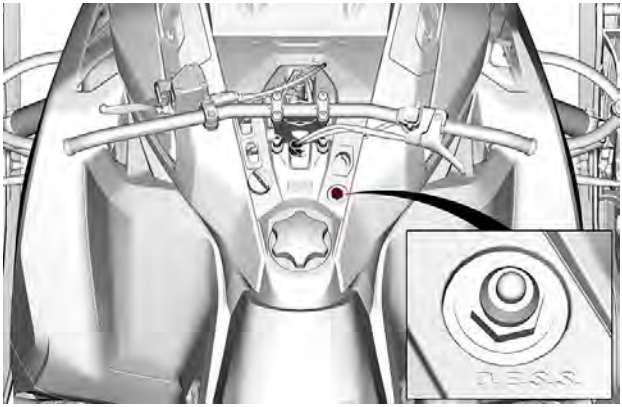
1. *Apply and hold brake*
2. *Lock brake lever using parking brake lever*

To Release Parking Brake

Squeeze brake lever. Parking brake lever will automatically return to its original position. Always release parking brake before riding.

Engine Cut-off Switch

This engine cut-off switch equipped the models with a mechanical ignition key.



TYPICAL

The engine cut-off switch (tether cord) is located on the console.

The tether cord cap must be securely snapped on the engine cut-off switch to allow vehicle operation.

Pulling the tether cord cap from the switch shuts the engine off.

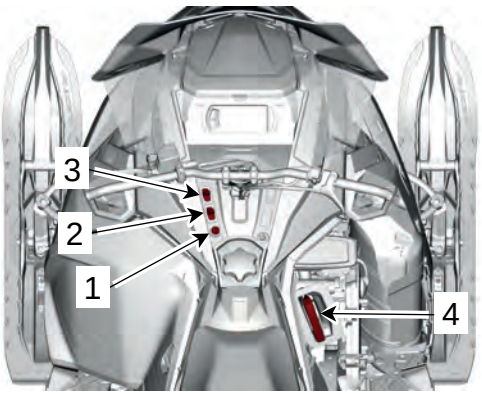
⚠ WARNING

Always attach the tether cord eyelet to clothing before starting the engine.

SECONDARY CONTROLS

Some features may not apply to your model or could be optional.

Vehicle safety labels are not shown on illustrations. For information on vehicle safety labels, refer to *Vehicle Safety Labels*.

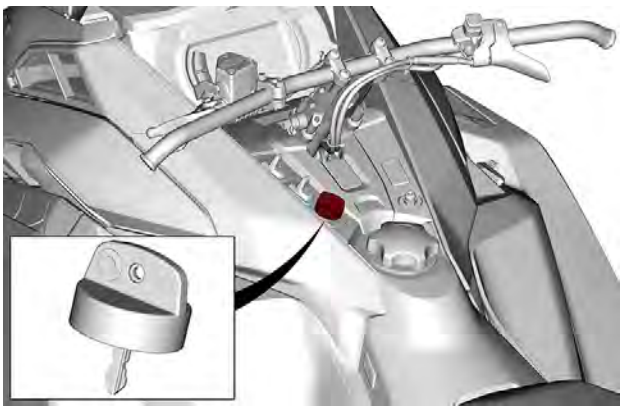


TYPICAL – EFI ENGINE

1. *Start/Electronic reverse switch*
2. *Heated grips switch*
3. *Headlights dimmer switch*
4. *Rewind starter handle (RH side panel removed))*

Console Switches – 600 EFI

Start/ Electronic Reverse Switch



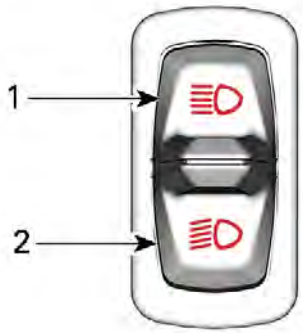
TYPICAL

Turn the ignition key to start the engine. Refer to *Engine Starting Procedure* in *Basic Procedures*.

Once engine is started, turn the key to engage the electronic reverse. Refer to *Reverse (RER)* in *Basic Procedures*.

Headlights Dimmer Button

Press to select HI or LOW beam. Lights are automatically ON when the engine is running.



1. *HI beam*
2. *LOW beam*

Heated Grips and Heated Throttle Lever Switch – 4.5" Digital Display with Console Switch

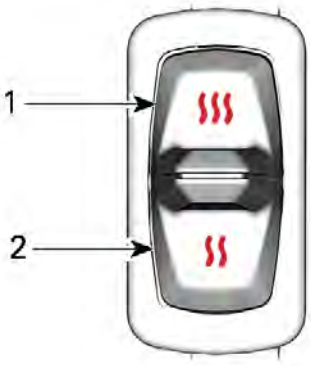
NOTE:

– Under 2000 RPM, heated grips will be limited at 50%.
– Battery level will limit heated grips. Under 13 V the heated grips will be turned off.

The switch on the console controls simultaneously the handlebar grips and the throttle lever heat intensity.

The balance between the temperature of the throttle lever and the grips can be adjusted.

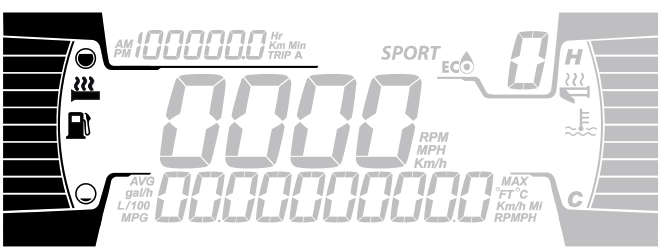
Depress switch as required to select heating intensity to keep your hands at a comfortable temperature.



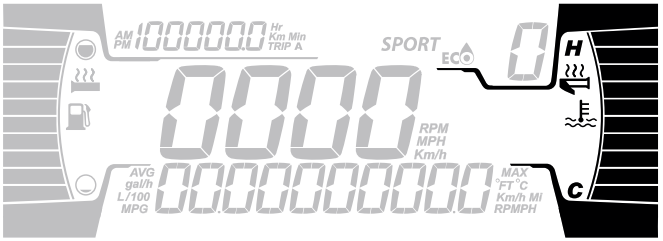
1. *Increase heat*
2. *Decrease heat*

The heating intensity is displayed via the digital display.

Heated Grips Display



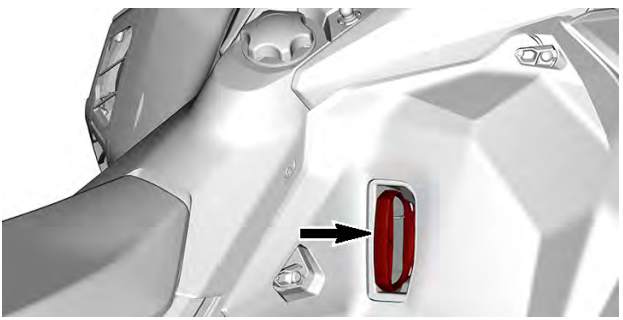
Heated Throttle Lever Display



Heated grips and throttle lever will be OFF when there are no bars displayed on the gauge.

When the switch is released, display will return to fuel level and engine temperature.

Rewind Starter Handle (if equipped)



TYPICAL

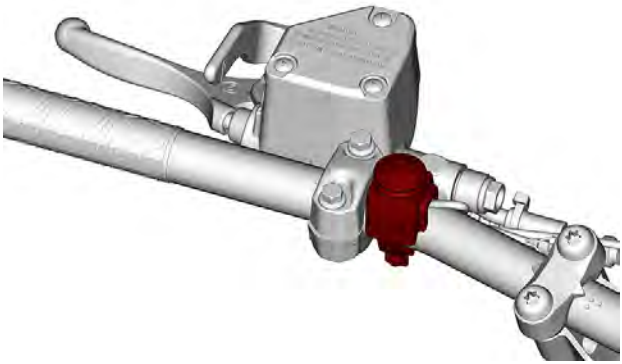
Auto-rewind type located on right hand side of snowmobile. To engage mechanism pull handle slowly until a resistance is felt then pull vigorously. Slowly release handle.

NOTE:
The maximum torque that can be transmitted to the engine by the rewind starter is 80 Nm (59 lbf-ft). The maximum force that can be exerted on the on the rope is 2 200 N (494.6 lbf).

Horn Button (if equipped)

For vehicles sold in Finland

Press on the horn button to activate the horn.

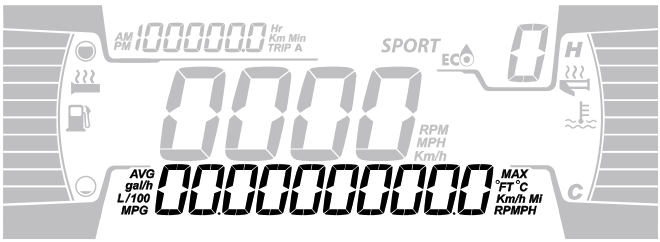


TYPICAL

4.5" DISPLAY

Multifunction Display

Lower Display



May display the following:

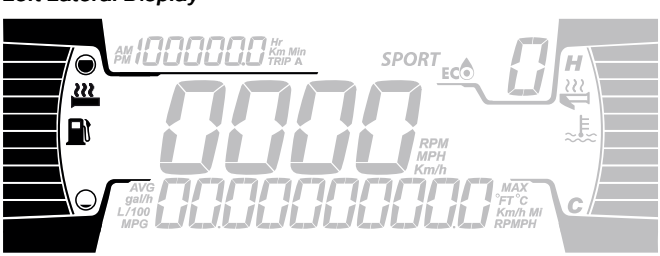
– RPM
– Speed
– Engine Temperature
– Fuel Statistics
– Settings
– Messages
– Outside temperature (if equipped)

To change the displayed information, use the gauge LOWER (M) button, or the Mode button on the handlebar multifunction switch, if equipped.

The SPEED STAT display shows the maximum and the averaged speed. Hold LOWER button for 3 seconds to reset.

When the SPEED display is chosen, the RPM is shown in the TRIP display.

Left Lateral Display

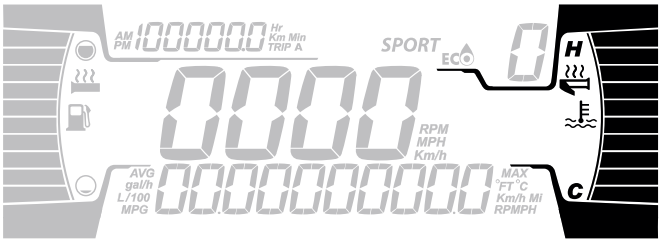


The left lateral display includes:

– Fuel level indicator

– Heated Grip level

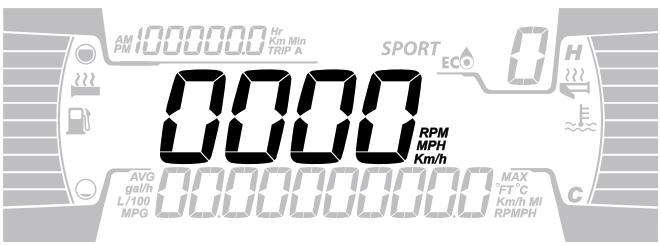
Right Lateral Display



The right lateral display includes:

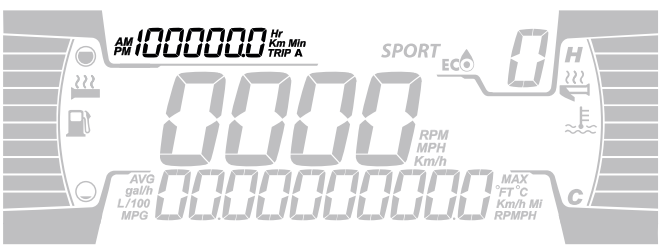
– Engine Temperature
– Heated throttle indicator

Central Display



Display the RPM of the engine or the vehicle speed in km/h or MPH.

Trip Display



This display shows trip informations:

– Cumulative distance odometer
– Trip A hours
– Trip A distance (km or mi)
– Vehicle hour meter
– Clock (If battery equipped)

To change the displayed information, use the gauge UPPER (T) button, or the Trip button on the handlebar multifunction switch, if equipped.

To reset the Trip A, press and hold the gauge UPPER (T) button, or the Trip button on the handlebar multifunction switch, if equipped.

Warning Lamps and Indicators

The following indicator lamps will alert you to a vehicle condition that may become serious. Some lamps will illuminate when starting the vehicle to make sure they work. If any lamps remain on after starting the vehicle, refer to the respective system warning lamp for further information.

NOTE:
Some warning indicators appear in the display of the multifunction gauge and function the same as an indicator lamp but do not display when starting the vehicle.

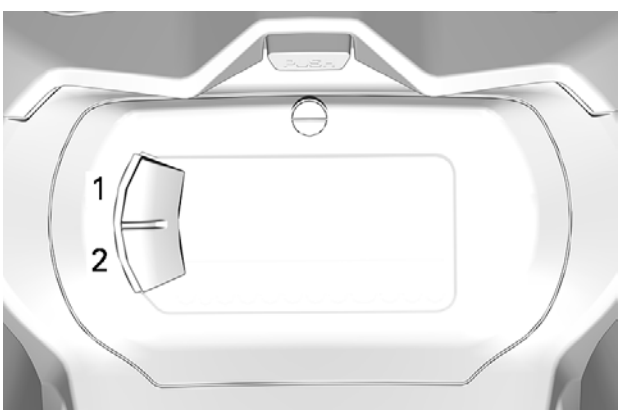
Telltale Lights - Lower Bar

Lights	Description
	ORANGE - Vehicle malfunction
	BLUE - The high beam are selected
	RED - The engine temperature is too high.
	RED - Parking brake is engaged or malfunction of the brake system

Lights	Description
	RED - The battery voltage too low or problem with the electrical system
	RED - Low injection oil level
	ORANGE - Low fuel level
	ORANGE **Turn on**: Malfunction of the vehicle emissions control system **Blink**: Engine problems, the limp home mode is activated. Have the vehicle serviced immediately.

Settings

Setup



1. *Upper button (Trip)*
2. *Lower button (Menu)*

NOTE: A Trip and a Menu buttons can be found on the handlebar multifunction switch, if equipped.

Using the LOWER (M) button, select **SETTINGS** and hold to enter setting menu.

Reset Stats

Using LOWER button, select **RESET STAT** and hold to reset.

Unit Selection

This multifunction gauge is factory preset in metric units but it is possible to change it to imperial units.

Using LOWER button, select **UNITS** and hold button to change units.

Setting Clock

Using LOWER button, select **CLOCK** to change the clock.

1. Press LOWER button to select clock display.
2. Push and hold LOWER button for 1 second.
3. Press LOWER button to select 12:00 AM PM or 24:00 time base.
4. Push and hold LOWER button to acknowledge selection.
5. Press LOWER button to change hours (hours flash).
6. Push and hold LOWER button to acknowledge hour selection.
7. Press LOWER button to switch to minutes (minutes flash).
8. Push and hold LOWER button to acknowledge minutes selection.

Setting Brightness

The brightness of the LCD display can be adjusted.

Using LOWER button, select **BRIGHTNESS** and hold button to change brightness.

Using LOWER button, adjust brightness then push and hold the button to acknowledge selection.

Setting Language

The gauge display language can be changed. Refer to an authorized BRP snowmobile dealer for language availability and to setup the gauge to your preference.

Fault Codes

Available only when at least one code is activated.

Using LOWER button, select **CODES** and hold to see actives fault codes.

Fault codes will be scrolled on the Lower Display.

EQUIPMENT

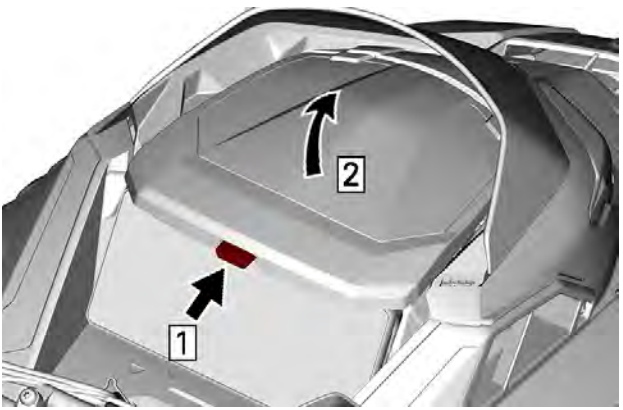
Some features may not apply to your model or could be optional.

Front Storage Compartment

A storage compartment is located at the front of the vehicle, above the gauge.

The Operator's Guide and the emergency starter rope are in the front storage compartment.

To open, push the button and lift the cover.



TYPICAL

Step 1. Push
Step 2. Lift

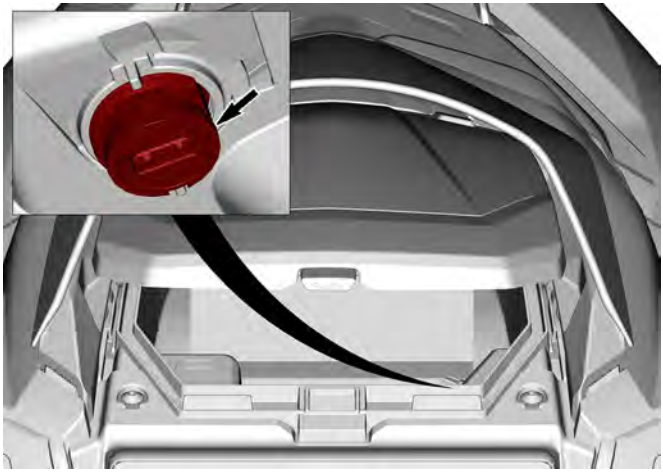
NOTE:
When closing, make sure cover is secured properly. You will hear a "click".

Operator's Guide

The Operator's Guide should be stored in the *Front Storage Compartment*.

Power Outlet - USB (if equipped)

The USB power Outlet is located in the front storage compartment. It allows to charge your cell phone while stored in the heated cell case.

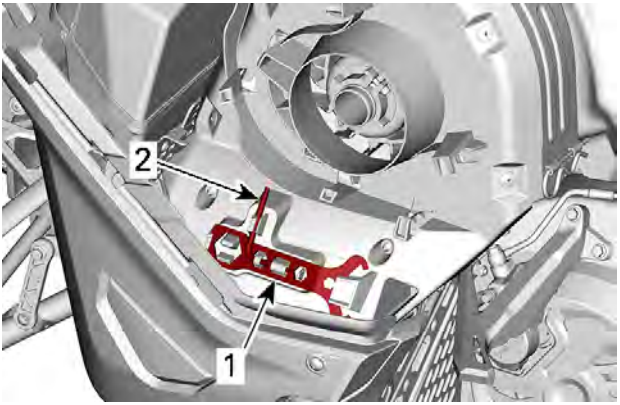


TYPICAL

Tools

A part of the drive belt guard is designed to hold the tools allowing for basic maintenance.

The tools are supplied with the vehicle. They should always be installed in their proper location and orientation.



TYPICAL - DRIVE BELT GUARD TOOLS LOCATION

1. *Suspension adjustment tool*
2. *Pulley expander and headlight adjustment tool*

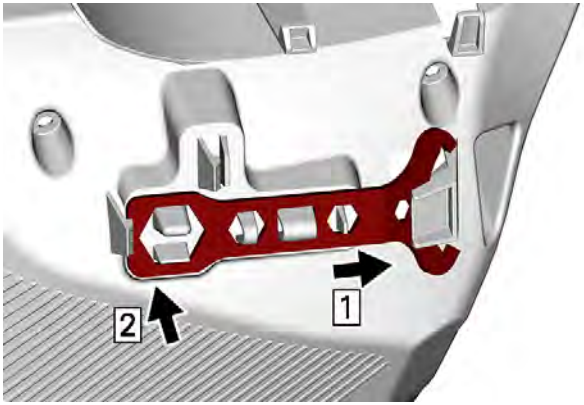
Install in the following sequence:

⚠ CAUTION
Make sure tools are secured properly. Tools may detach and cause damage to rotating parts.

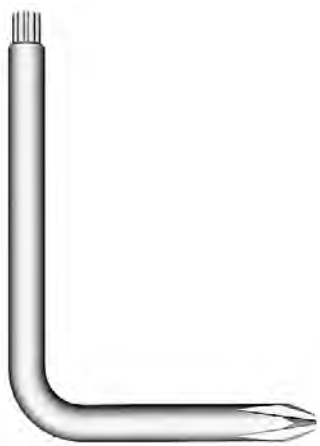
1. Slide the suspension adjustment tool open end under retaining tab.

SUSPENSION ADJUSTMENT TOOL

2. Press the closed end on the retaining tabs.

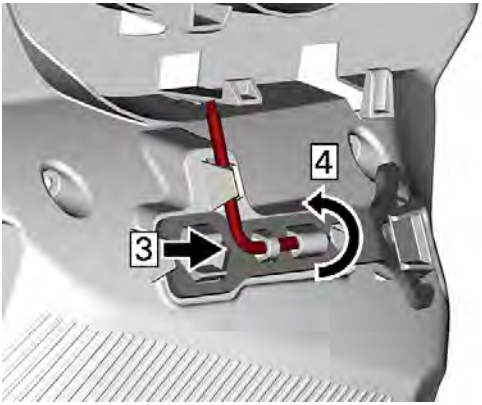


3. Slide the Pulley expander and headlight adjustment tool short end into hole.



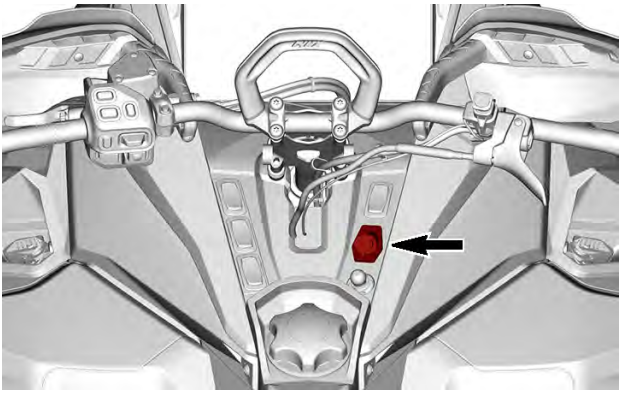
PULLEY EXPANDER AND HEADLIGHT ADJUSTMENT TOOL

4. Rotate and clip long end in place.



Electric Visor Jack Connector

An electric visor can be connected to the jack connector.

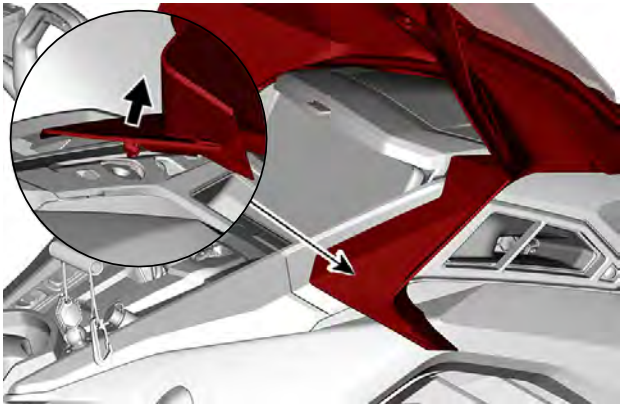


TYPICAL

Windshield

Removing the Windshield

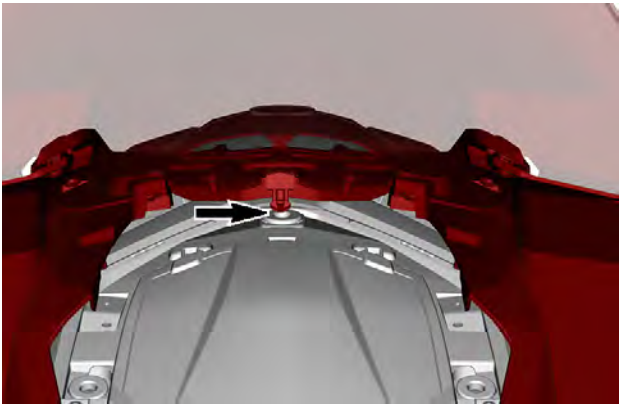
1. Pull off the deflector pins off the grommets.



2. Place hands on each sides of the windshield.
3. Pull the windshield up until both side pins come out of their rubber grommets.

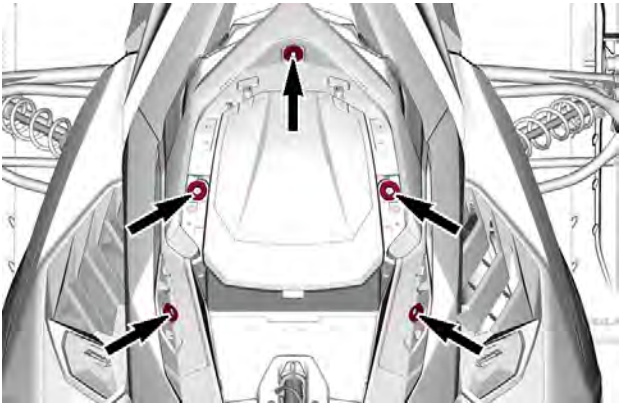
RIGHT SIDE — TYPICAL

4. Disengage the center pin.



Installing the Windshield

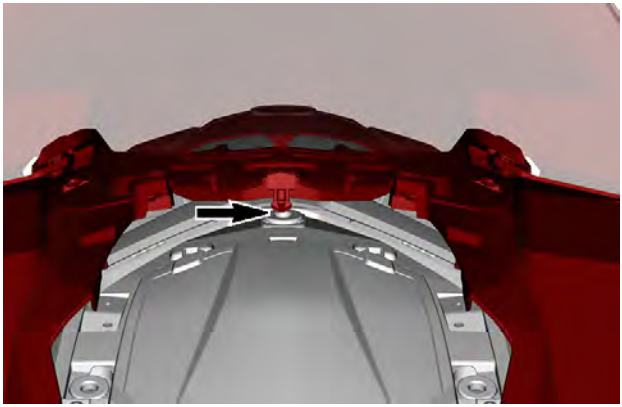
1. Lubricate the grommets using soapsuds, if required.



NOTICE

Do not lubricate grommets with any type of grease.

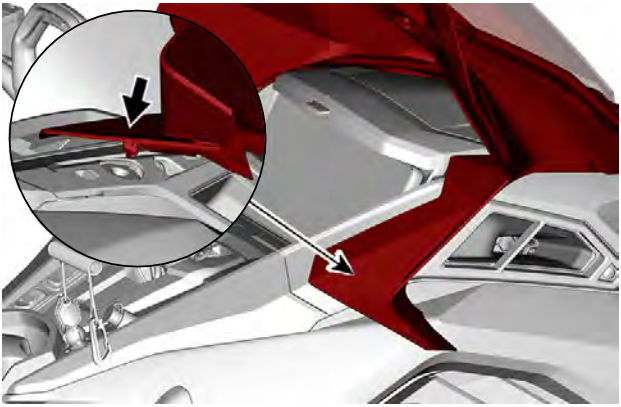
2. Insert the center pin.



3. Insert both side pins into the rubber grommet.

RIGHT SIDE — TYPICAL

4. Insert the deflector pin into the rubber grommet.

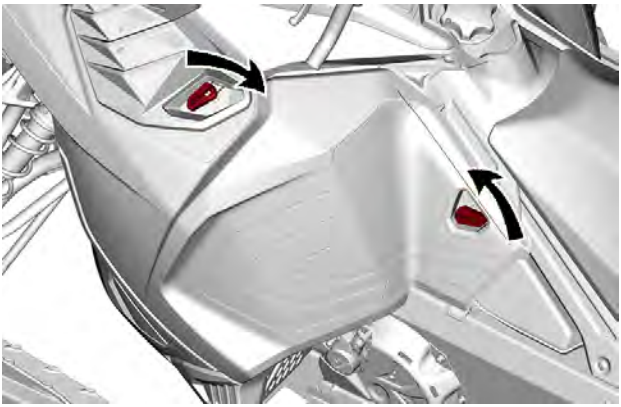


Body Panels

Side Panels - 500 mm (20”) Tunnel Models

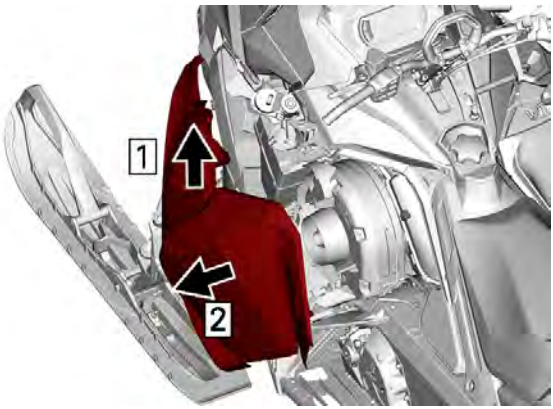
Removing the Side Panels

1. Rotate the side panel latches to the unlocked position.



LEFT SIDE SHOWN

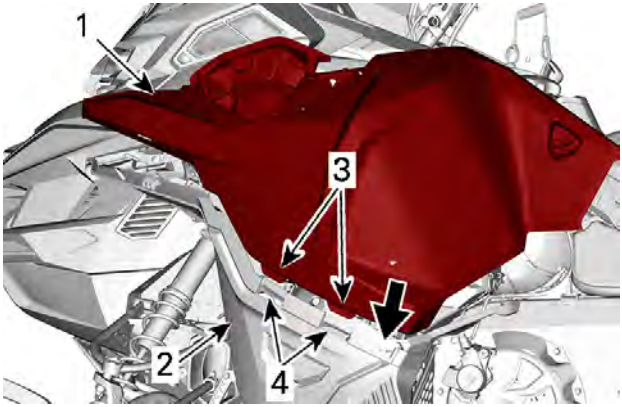
2. Lift the side panel slightly to disengage the bottom tabs, then remove the side panel.



LEFT SIDE SHOWN

Installing the Side Panels

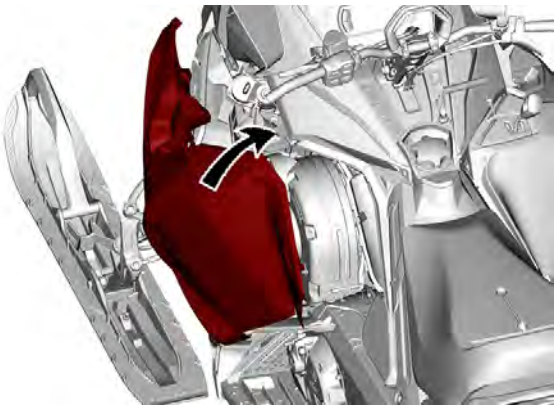
1. Engage the bottom tabs in the bottom pan slots.



LEFT SIDE SHOWN

1. *Side panel*
2. *Bottom pan*
3. *Side panel tabs*
4. *Bottom pan slots*

2. Rotate the side panel into position.

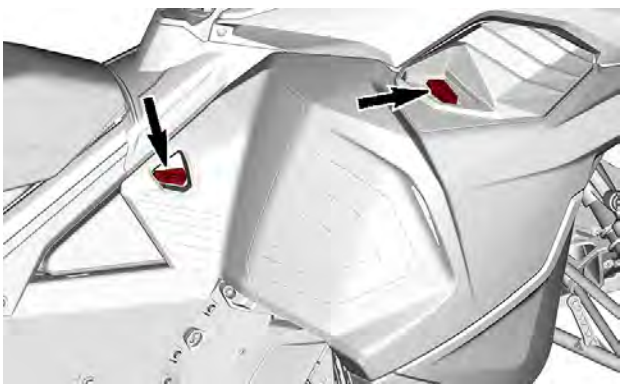


3. Turn the side panel latches to the locked position.

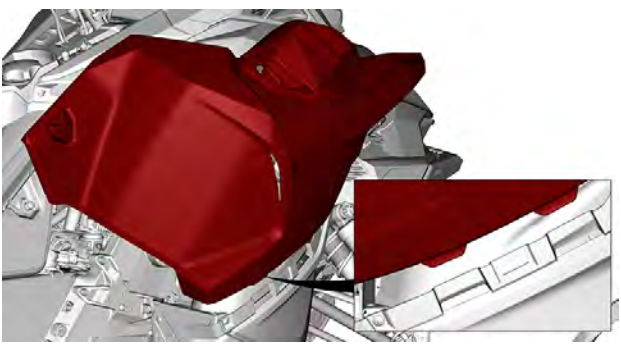
Side Panels - 2 Latches Type

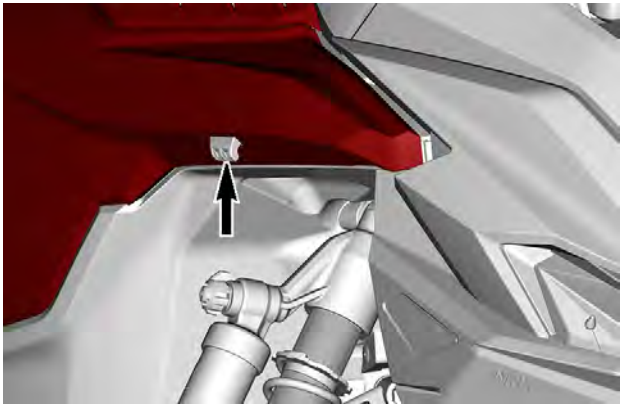
Removing the Side Panels

1. Release all latches, then open the panel.



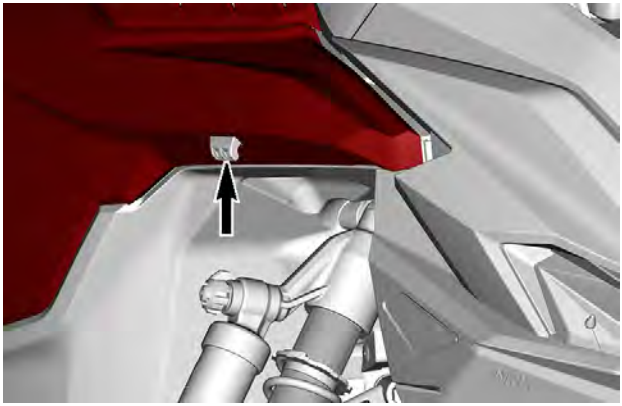
2. Lift the side panel to disengage the tabs.

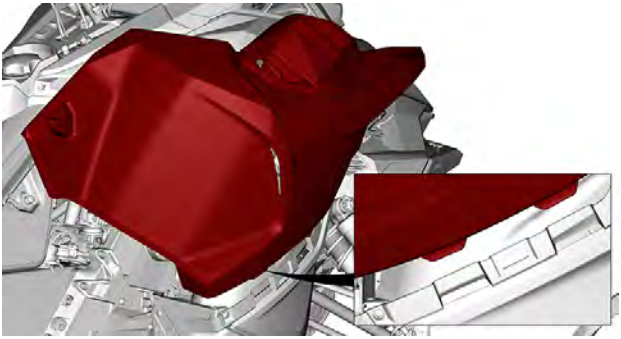




Installing the Side Panels

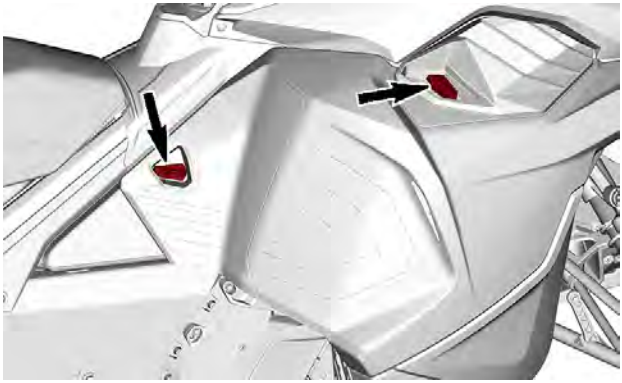
1. Insert the side panel into the bottom pan tabs.





2. Tilt the panel.

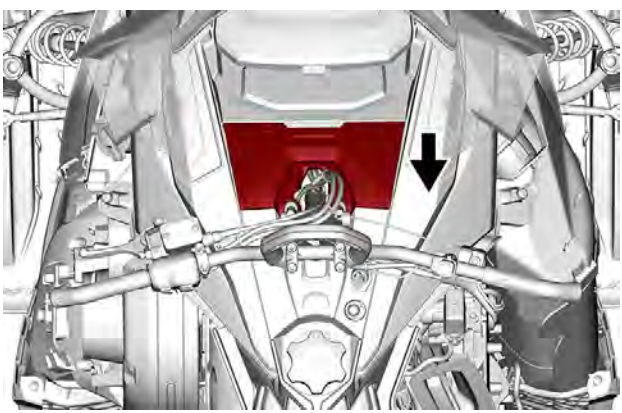
3. Secure the side panel with the latches.



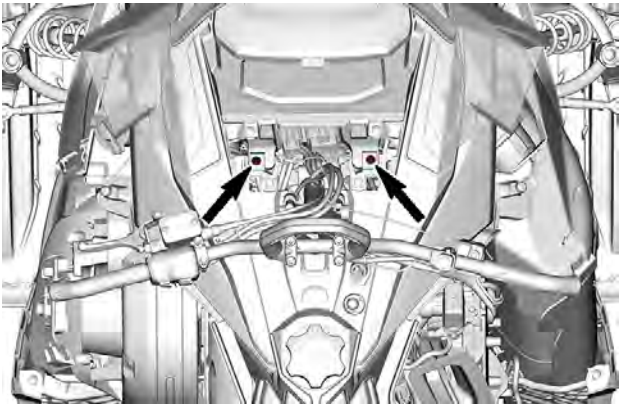
Upper Body Module

Removing the Upper Body Module

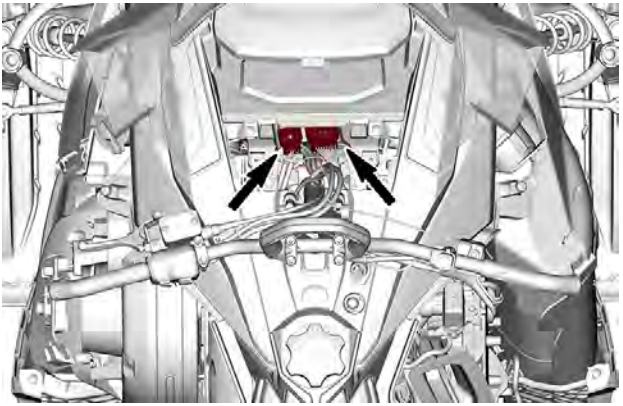
1. Remove side panels. Refer to *Removing the Side Panels*.
2. Remove the access cover by sliding it rearward.



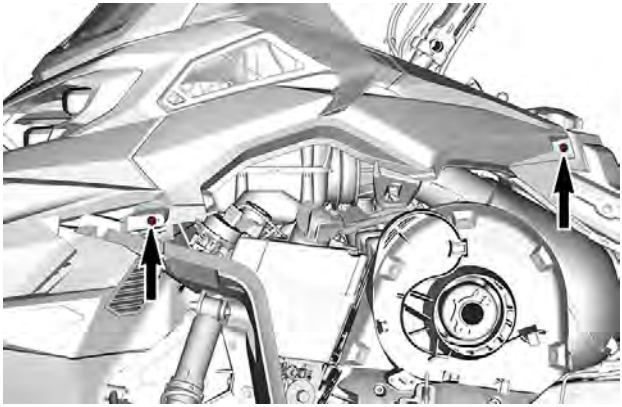
3. Remove the following fasteners.



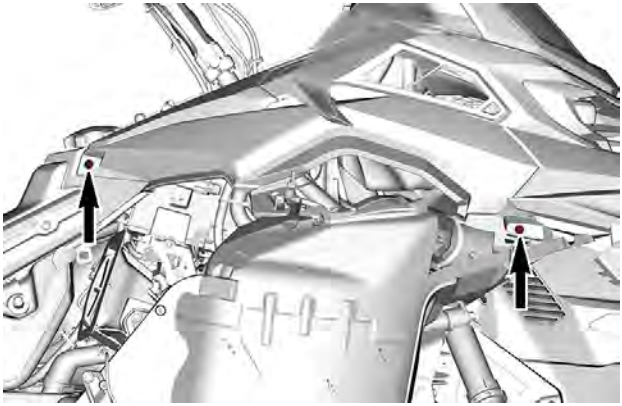
4. Disconnect the following connectors.



5. Remove the following fasteners.

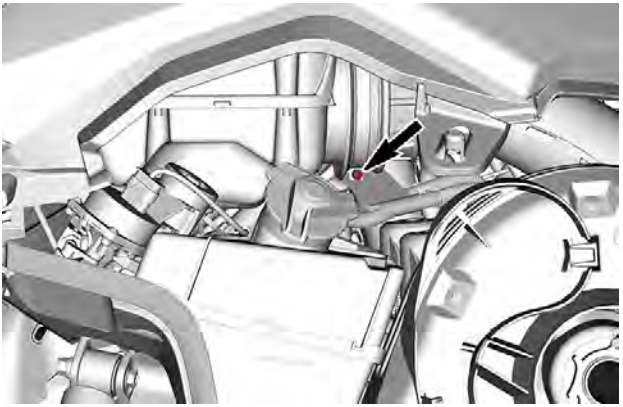


LH SIDE



RH SIDE

6. Loosen the air intake duct clamp.



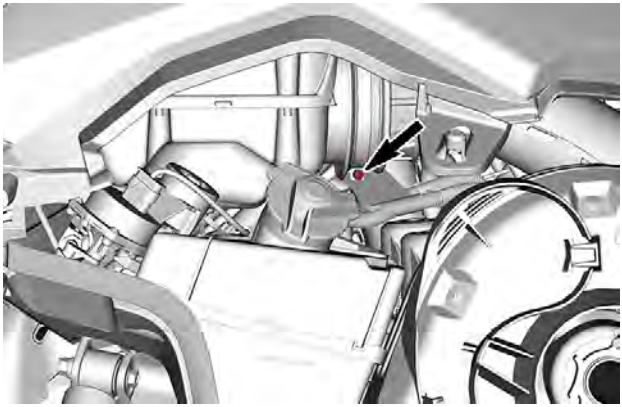
7. To remove the upper body module, grab it in the gauge support area and pull it forward.

Installing the Upper Body Module

1. To install the upper body module, grab it in the gauge support area and push it rearward.

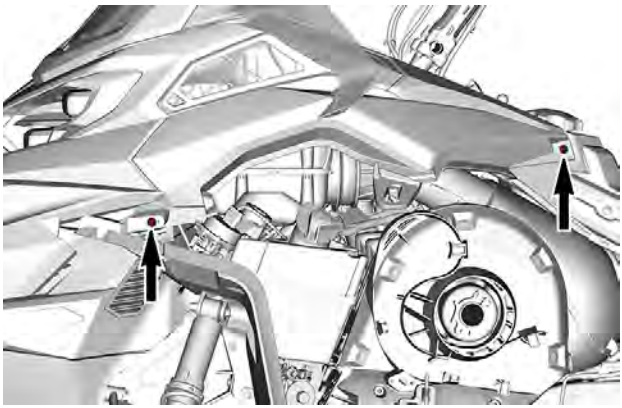
NOTE:
Make sure the air intake duct is positioned properly connected.

2. Tighten the air intake duct clamp to specification.

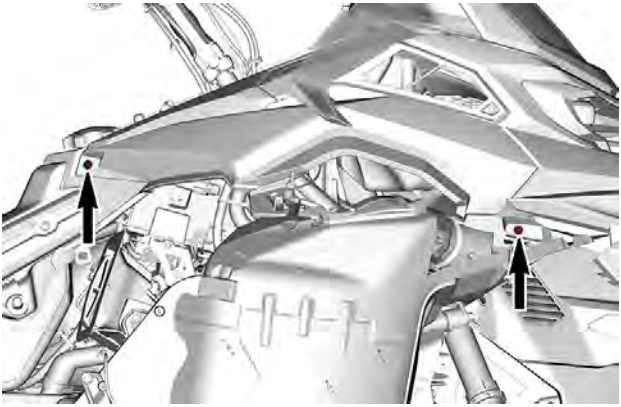


TIGHTENING TORQUE	
Air intake duct clamp	1.0 ± 0.2 Nm (9 ± 2 lbf-in)

3. Install the upper body module retaining screws. Tighten to specification.



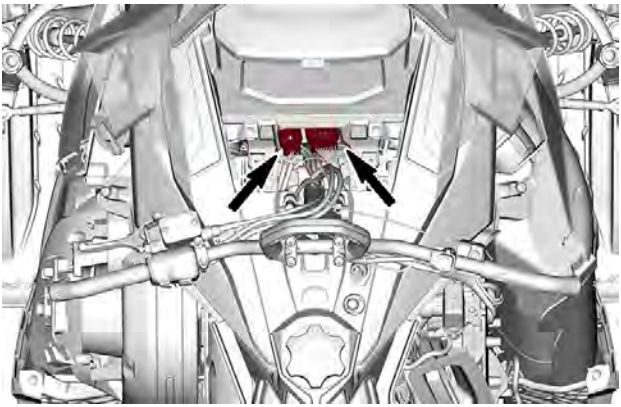
LH SIDE



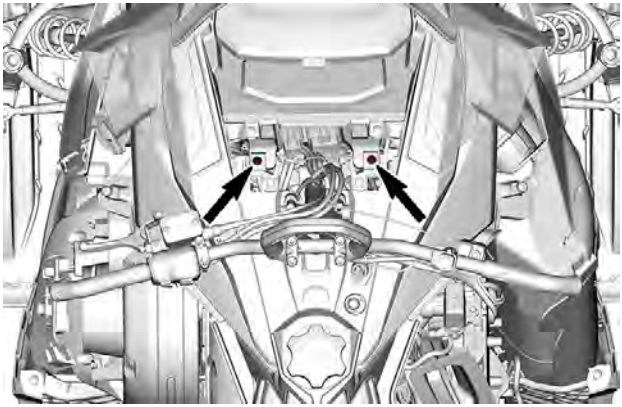
RH SIDE

TIGHTENING TORQUE	
Upper body screws	1.8 ± 0.2 Nm (16 ± 2 lbf-in)

4. Connect the following connectors.

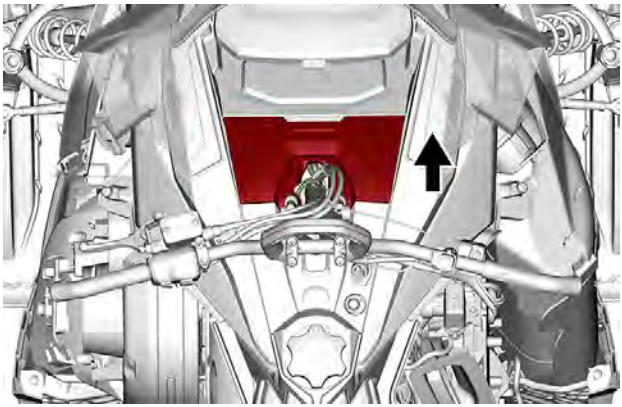


5. Install the following fasteners. Tighten to specification.



TIGHTENING TORQUE	
Upper body screws	1.8 ± 0.2 Nm (16 ± 2 lbf-in)

6. Install the access cover by sliding it forward.



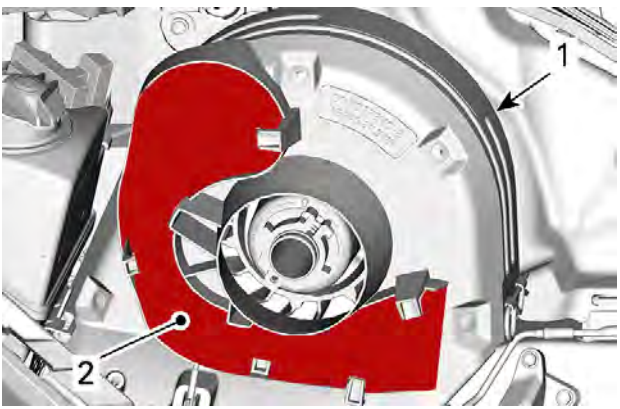
7. Install the side panels. Refer to *Installing the Side Panels*.

Spare Drive Belt Holder

A spare drive belt can be stored in a holder located on the drive belt guard.

NOTE:
The spare drive belt is not supplied with the snowmobile.

Position spare drive belt into drive belt guard slot.



TYPICAL

1. *Drive belt guard*
2. *Slot*

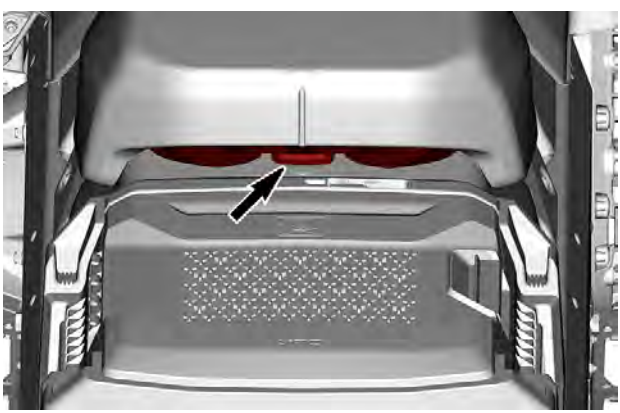
Secure in place by sliding it behind the tabs.

TYPICAL

Seat

Removing the Seat

Release the latch at the back of the seat.



Slide seat rearwards to remove it.

Installing the Seat

NOTICE

Riding the vehicle with any objects between the seat and the fuel tank could damage the fuel tank. NEVER place any objects between seat and fuel tank.

Place seat over the hooks, then slide it forward.

Securely engage the latch.

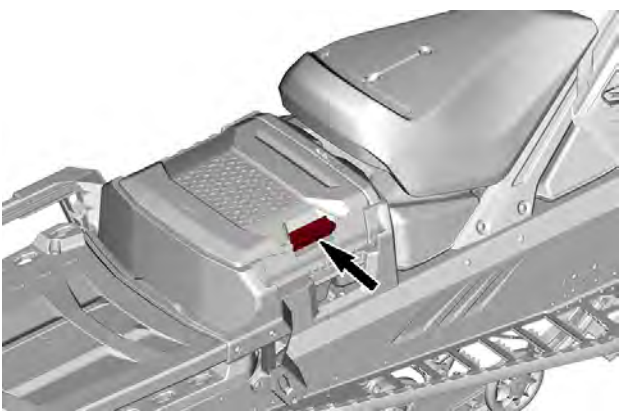
⚠ WARNING

Make sure seat is securely latched before riding.

Rear Storage Compartment (if equipped)

A storage compartment is located at the rear of the seat, above the battery cover.

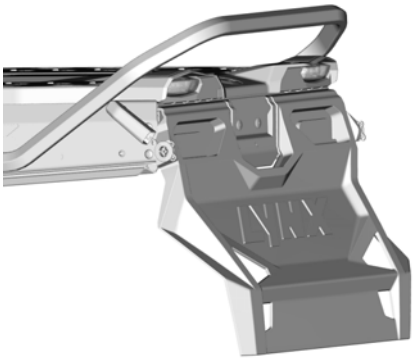
1. Lift the handle, to open the rear storage compartment.



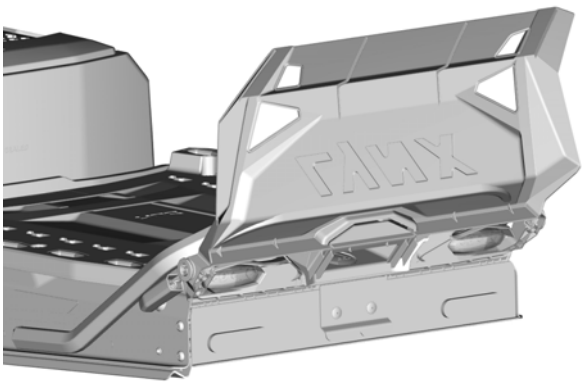
Reversible Snow Guard (if equipped)

The reversible snow guard can be positioned on the down or up position.

For trail riding, lower the snow guard to the down position.



For deep snow riding, rise the snow guard to the up position.



Engine Starting Procedure

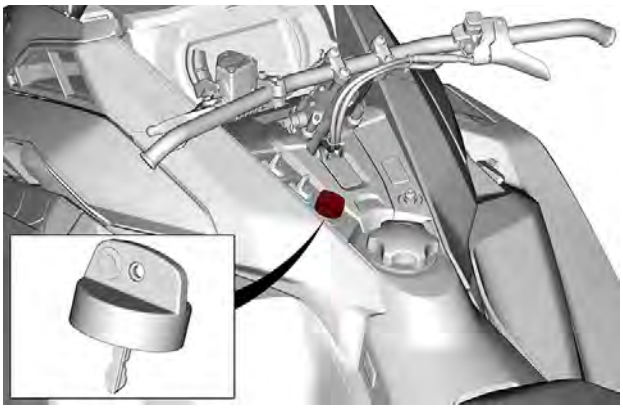
Procedure - 600 EFI Engine

1. Apply parking brake.
2. Recheck throttle control lever operation.
3. Put your helmet on.
4. Ensure that the tether cord cap is installed on the engine cut-off switch and that the cord is attached to your clothing eyelet.
5. Ensure that the emergency engine stop switch is in the ON position (up).

⚠ WARNING

Never depress throttle while starting engine.

6. Turn the ignition key clockwise to engage the electric starter and start the engine.



TYPICAL

NOTICE

Do not engage electric starter for more than 10 seconds at a time. A rest period should be observed between the cranking cycles to allow electric starter to cool down.

7. Release parking brake.

NOTE:
For an initial cold start, do not release parking brake. Perform the *vehicle warm-up* procedure as explained below.

Vehicle Warm-Up

Before every ride, vehicle has to be warmed up as follows.

1. Start engine as explained in *Engine Starting Procedure* above.
2. Allow engine to warm up one or two minutes at idle speed.

NOTE:
Engine will shut down after approximately 12 minutes of idling.

3. Disengage parking brake.
4. Apply throttle until drive pulley engages. Drive at low speed the first two or three minutes.

NOTICE

If vehicle does not move when throttle is applied, stop engine, remove tether cord cap from the engine cut-off switch, then do the following.

- **Check if skis are stuck on the ground. Lift one ski at a time by the handle, then put it down.**
- **Check if track is stuck on the ground. Lift rear of snowmobile enough to clear track from the ground, then drop.**
- **Check rear suspension for hard snow or ice accumulation that could interfere with track rotation. Clean the area.**
- **If equipped, validate that transmission is engaged (not in neutral).**

⚠ CAUTION

Beware of injuries by using proper lifting techniques, notably using your legs force. Do not attempt to lift the rear of vehicle if it is above your limits.

⚠ WARNING

Make sure tether cord cap is removed before standing in front the vehicle, getting close to the track or rear suspension components.

NOTE:
Warm-up is electronically controlled. During this period (up to 10 minutes depending on ambient temperature), engine RPM is limited.

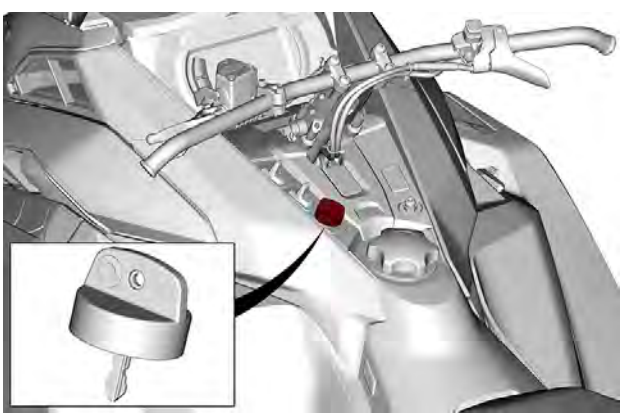
Reverse (RER)

When the engine is running, turning the starting key will slow down the engine RPM to almost a stop and advance the ignition timing to invert the crankshaft rotation.

– The engine will automatically shift into forward when restarting after stopping or stalling.
– Shifting procedure will take place only when the engine is running.
– If engine is running at a speed above 4300 RPM, the RER function is disabled.
– It is recommended to warm up the engine to its normal operating temperature before shifting.

Shifting in Reverse

1. Bring vehicle to a complete stop.
2. Apply and hold brake. Remain seated, refer to *Rider Position (Reverse Operation)* in *Riding the vehicle* for posture information.
3. With engine at idle speed, turn the ignition key clockwise and release.



TYPICAL

4. Wait until reverse beeper sounds, then gently depress throttle lever.

⚠ WARNING

The reverse speed is not limited. Always proceed with caution as fast reverse could result in loss of vehicle stability. Come to complete stop before activating the reverse. Always remain seated and apply the brake before shifting. Ensure the path behind is clear of obstacles or bystanders before proceeding.

Shifting in Forward from Reverse

1. Bring vehicle to a complete stop.
2. Apply and hold brake.
3. Turn the ignition key clockwise and release.
4. Apply throttle slowly and evenly. Allow drive pulley to engage then accelerate carefully.

Shutting Off the Engine - 600 EFI Engine

Release throttle lever and wait until engine has returned to idle speed.

Shut off the engine using either the emergency engine stop switch or by pulling off the tether cord cap from the engine cut-off switch.

The engine can also be shut off by turning the ignition key counterclockwise in OFF position.

⚠ WARNING

Always remove the tether cord cap from engine cut-off switch when vehicle is not in operation in order to prevent accidental engine starting or to avoid unauthorized use by children or others or theft.

FUEL

Fuel Requirements

NOTICE

Always use fresh gasoline. Gasoline will oxidize; the result is loss of octane, volatile compounds, and the production of gum and varnish deposits which can damage the fuel system.

Alcohol fuel blending varies by country and region. Your vehicle has been designed to operate using the recommended fuels, however, be aware of the following:

- Use of fuel containing alcohol above the percentage specified by government regulations is not recommended and can result in the following problems in the fuel system components:
  - Starting and operating difficulties.
  - Deterioration of rubber or plastic parts.
  - Corrosion of metal parts.
  - Damage to internal engine parts.
- Inspect frequently for the presence of fuel leaks or other fuel system abnormalities if you suspect the presence of alcohol in gasoline exceeds the current government regulations.
- Alcohol blended fuels attract and hold moisture which may lead to fuel phase separation and can result in engine performance problems or engine damage.

Recommended Fuel

Use unleaded gasoline containing MAXIMUM 10% ethanol. The gasoline must have the following minimum octane requirements.

Fuel type	Engine	Min. octane rating
Fuel with NO ethanol	600 EFI	91 AKI (RON+MON)/2 95 RON
Fuel which may contain up to 10% MAX ethanol	600 EFI	91 AKI (RON+MON)/2 95 RON

NOTICE

Never experiment with other fuels. Engine or fuel system damages may occur with the use of an inadequate fuel.

NOTICE

Do NOT use fuel from fuel pumps labeled E85.

Use of fuel labeled E15 is prohibited by U.S. EPA Regulations.

Refueling Procedure

⚠ WARNING

- **Gasoline and gasoline vapors are extremely flammable and highly explosive under certain conditions. To reduce the risk of property damage, serious injury or death from improper handling of gasoline when refueling, always follow the instructions contained in this section explicitly.**
- **Gasoline is poisonous. Improper handling can cause serious injury or death. Never siphon gasoline by mouth. Do not inhale vaporized gasoline. If you swallow gasoline, get some in your eyes, or inhale gasoline vapor, see your doctor immediately. If gasoline spills on your skin, wash with soap and water. Change your clothes if gasoline spilled on them.**

Before Refueling the Snowmobile

⚠ WARNING

Failure to follow these precautions while refueling your snowmobile may result in serious injury or death:

- **Do not smoke, or allow open flames or sparks when refueling. Fuel vapors could ignite and cause a fire.**
- **Do not allow people to stay on the vehicle while refueling**
- **Always proceed in a well-ventilated area.**
- **Ensure vehicle is in a horizontal position when refueling.**

1. Park the snowmobile on a level surface. Apply the parking brake.
2. Turn off the engine.
3. Ensure the operator and passenger get off of the vehicle.
4. Confirm the type of fuel. Refer to *Recommended Fuel*.

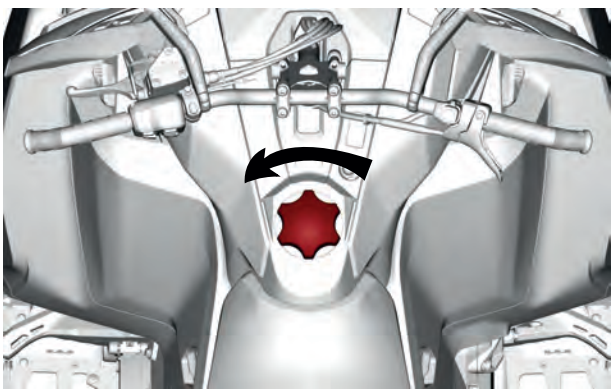
Opening the Fuel Tank Cap

⚠ WARNING

In warm environment or after operation, the fuel tank may be under pressure. Pressurized fuel or fuel vapor may spray out of the filler neck and cause serious injury.

- **Always hold the grips of the fuel tank cap and turn it slowly to remove it.**
- **A whooshing sound may be heard when the fuel tank cap is loosened. Before fully removing the cap wait until the sound cannot be heard.**

1. Turn the fuel tank cap slowly to open it.



TYPICAL

When Refueling

⚠ WARNING

Fuel spilled on or close to hot engine components can cause fire, explosion, or other hazards which may result in SERIOUS INJURY or DEATH.
Be careful not to spill fuel when refueling immediately after operating your snowmobile. Do not overfill the fuel tank.

⚠ WARNING

Observe these precautions when refueling to prevent the fuel tank from overflowing:

- **Fully insert the fuel nozzle into the fuel filler neck.**
- **Fill slowly so that air can escape from the tank and prevent any overflow or spray.**
- **Stop filling the tank after the nozzle automatically clicks off.**
- **Do not top off the fuel tank.**

Additional precautions if using portable fuel containers:

- **Do not spill fuel. Portable containers can spill more easily. Use smaller containers for an easier hold and balance when refueling.**
- **Make sure to use containers that do not hold more than the amount of fuel needed to avoid overfilling the fuel tank.**
- **Inspect your containers before use, they may leak due to wear and tear.**

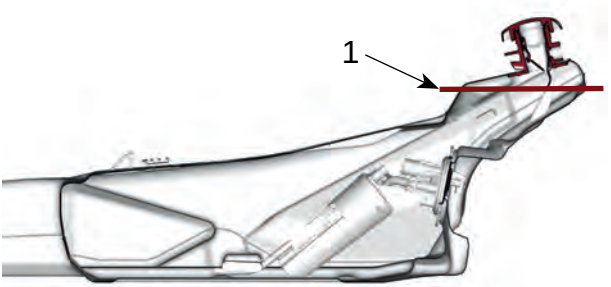
⚠ WARNING

Never top up the fuel tank before placing the vehicle in a warm area. As temperature increases, fuel expands and may overflow.

1. Do not top up the fuel tank as this may cause fuel to overflow and result in fuel spillage. Always leave room for the fuel to expand as the temperature rises.

NOTE:
The fuel tank is full **BEFORE** the fuel level reaches the bottom of the filler neck. If you fill fuel up to the bottom of the filler neck, fuel could leak through the fuel tank vent causing a spill.

NOTE:
To help fill the tank and minimize the risk of splashing, insert the fuel nozzle on the centerline of the snowmobile, not from the side, and place the tip towards the rear of the snowmobile.



TYPICAL
1. *Maximum Fuel Level Line*

2. After refueling, wait a few second before removing the fuel nozzle from the fuel filler neck to let it drain and prevent spillage.

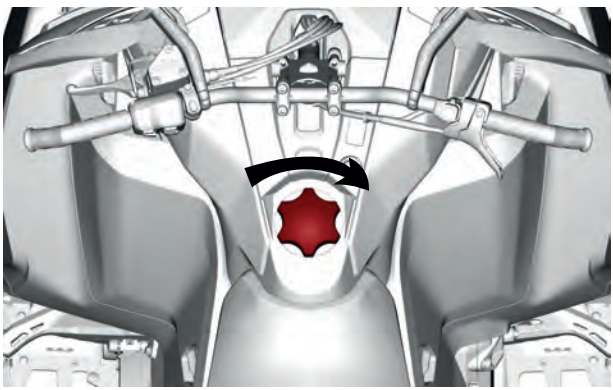
Closing the Fuel Tank Cap

⚠ WARNING

Fuel spilled on or close to hot engine components can cause fire, explosion, or other hazards which may result in SERIOUS INJURY or DEATH.

- **DO NOT sit or lean on the seat if the fuel cap is not installed. Sitting on the seat can push fuel out of the uncapped filler neck and cause a fuel spillage.**
- **ALWAYS make sure the fuel cap is closed securely after re-fueling and before operating the vehicle.**

1. Reinstall the fuel cap and turn it until fully tightened.



TYPICAL

2. Always wipe off spilled gasoline from the vehicle immediately.

⚠ WARNING

Always wipe off any small fuel spillage from the vehicle. If a major spillage occurs, remove side panels to remove fuel vapors from engine compartment before starting.

INJECTION OIL

Recommended Injection Oil

Rotax® engines were developed and validated using the XPS® oil. BRP recommends the use of its XPS injection oil or an equivalent at all time. Damages caused by the use of an injection oil not suitable for this 2-stroke fuel injection engine may not be covered by the BRP Limited Warranty.

RECOMMENDED Injection Oil	
600 EFI	XPS 2T Synthetic Blend Oil (semi-synthetic)
IF THE RECOMMENDED XPS ENGINE OIL IS NOT AVAILABLE	
Use a 2-stroke lubricant designed for snowmobiles meeting or exceeding the following lubricant industry specifications: – JASO FD (M345-2004) – SAE Grade 4 (F / M 4)	

Injection Oil Level Verification

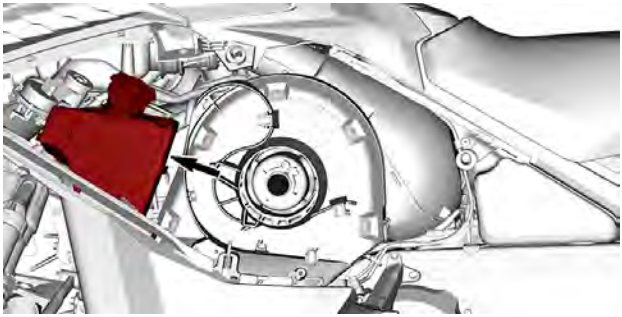
⚠ WARNING

Injection Oil is flammable when heated.

- **Never use an open flame to check oil level.**
- **Never smoke or allow flame or spark in vicinity.**
- **Always proceed in a well-ventilated area.**

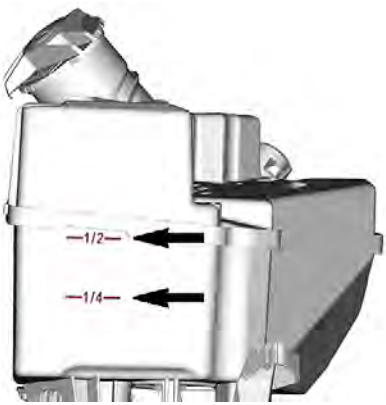
The injection oil reservoir is located behind the LH side panel. Refer to *Equipment* for opening procedure.

Always maintain a sufficient amount of recommended injection oil in the injection oil reservoir.



TYPICAL

Marks on the tank indicates "1/4" and "1/2" of the total amount of oil.

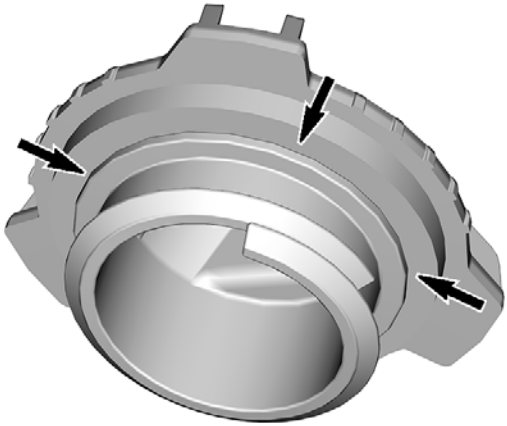


NOTICE

Check level and refill every time you refuel.

Adding Injection Oil

1. Remove injection oil reservoir cap.
2. Add injection oil and ensure to not overfill.
3. Wipe the reservoir cap seal and flange area.



4. Reinstall cap.

NOTICE

Do not overtighten.

⚠ WARNING

Wipe off any oil spills. Oil is highly flammable when heated.

BREAK-IN PERIOD

Operation During Break-In

Engine

During the break-in period:

– Avoid prolonged full throttle operation.
– Avoid sustained accelerations.
– Avoid prolonged cruising speeds.
– Avoid engine overheating.

However, brief accelerations and speed variations contribute to a good break-in.

During a predetermined period, the engine management system controls some engine parameters.

The duration is based on fuel volume. It will take approximately two fuel tanks to complete the break-in.

During this period:

– The engine performance and behavior will not be optimal.
– The fuel and oil consumption will be higher.

Drive Belt

A new drive belt requires a break in period of 50 km (30 mi).

During the break-in period:

– Avoid strong acceleration and deceleration.
– Avoid pulling a load.
– Avoid high speed cruising.

If the vehicle creeps, lower the drive belt height from the preliminary setting. Refer to *Drive Belt* in *maintenance procedure*.

Special Procedures

General

NOTE:
Component failures resulting from these events are not warrantable.

Refer to the appropriate subsections in this manual for the required tasks outlined in these procedures.

Emergency Starting

The engine can be started with the emergency starter rope supplied in the storage compartment. Refer to *Body and Seat*.

Remove the drive belt guard. Refer to *Body and Seat*.

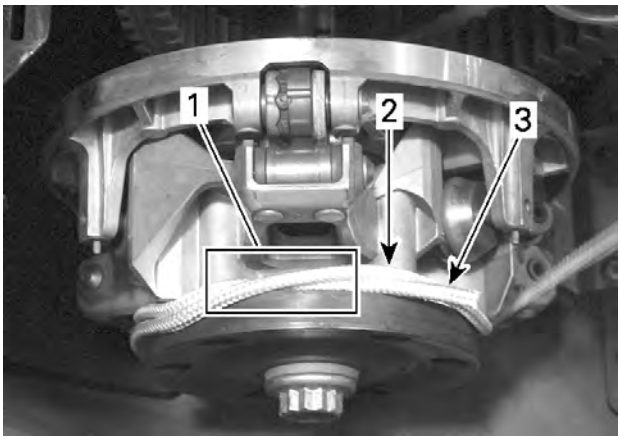
⚠ WARNING

Do not wind starting rope around your hand. Hold rope by the handle only. Do not start the engine by the drive pulley unless it is a true emergency situation. Have the snowmobile repaired as soon as possible.

Attach one end of emergency rope to the rewind handle.

NOTE:
The suspension adjustment tool can be used as an emergency handle.

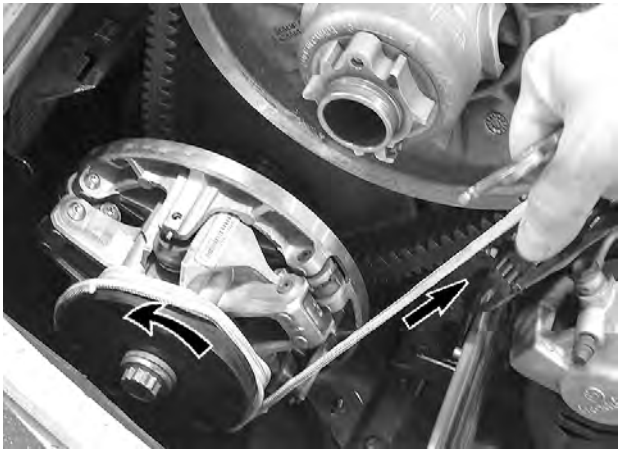
Cross the rope on the first turn as shown.



1. *Rope crossed*
2. *Rope to be winded*
3. *Rope end*

Wind rope two turns counterclockwise tightly around the drive pulley where shown.

Pull the rope using a sharp, crisp pull so the rope comes free of the drive pulley.



Start engine as per usual manual starting.

⚠ WARNING

When starting the snowmobile in an emergency situation, using drive pulley, do not reinstall the belt guard and return slowly to have snowmobile repaired.

Fuel Flooded Engine

If the engine does not start and it is fuel-flooded, this special mode can be activated to prevent fuel injection and to cut ignition while cranking. Proceed as follows:

1. Engage parking brake.
2. For models equipped with gearbox, move the shift lever to neutral position.
3. Turn the ignition key in ON position or install key on D.E.S.S. post.
4. Apply full throttle to enable anti-flood mode.
5. Turn ignition key in START position or press the engine START button during 10 seconds.
6. Release the ignition key or the engine START button.
7. Release throttle lever completely.
8. Turn the ignition key to START position or press the engine START button again to allow starting.

If the engine does not start:

1. Unplug injector electrical connector
2. Clean the spark plug caps area then remove them.
3. Remove the spark plugs.
4. Crank engine several times.
5. Install new spark plugs if possible or clean and dry spark plugs.
6. Start engine as explained above.

NOTICE

Verify that there is no fuel in engine oil. If so, replace engine oil.

If it does not work:

1. Check fuses condition.
2. Check the ignition system.
3. Check the fuel system.

Rolled Over Vehicle

Inspect components of the following systems: cooling, suspension, drivetrain and steering.

Inspect body and chassis for damage (welded joints, bent or cracked parts).

If vehicle has no damage, refer to *Maintenance Procedures* and inspect the following.

– Check for oil accumulation in the air intake system.
– Check the air filter.
– Check all fluids level before restarting engine.
– After restarting engine, check multifunction gauge if any malfunction is detected.
– Troubleshoot and repair as required before using vehicle.

Submerged Vehicle

In the event the vehicle was submerged, proceed with the following.

NOTICE

A submerged vehicle may cause several damages (short and long term) if not serviced adequately or soon enough. If water was drawn into the engine, the engine is most likely in a hydraulic lock. Do not crank or start engine or severe damage will occur. Inspect engine for water intrusion and hydraulic lock damage (water in the oil and cylinders, bent piston rod…). Carry out all items in this topic before cranking or attempting to start engine.

For models equipped with turbocharger.

1. Check for water intrusion through both sides of the turbo (impeller and compressor sides). Clean and dry as required.
2. Inspect the boost control solenoid valve. Clean valve, test engine and turbo system for proper operation. Replace valve if required.

For models equipped with Water Injection System.

3. Look for water in ICE fluid tank, if in doubt, flush ICE fluid and refill with new fluid.

For all models.

4. Drain the entire air intake system. Remove parts as required.
5. Inspect the throttle body.
6. Replace the air filter.
7. Drain, inspect and clean the CVT.
8. Empty mufflers (removal required).
9. Unplug ECM, multifunction gauge and open fuse boxes. Check for presence of water. Dry as necessary.
10. Inspect all lights for water intrusion. Dry as required.
11. Replace the engine oil (without starting the engine).
12. Remove spark plugs. Crank engine in drowned mode to expel any water.

⚠ CAUTION

Keep away from spark plug holes to avoid being splashed when cranking engine.

13. Add a small quantity of engine oil in cylinders (approximately 2 teaspoonfuls).
14. Install spark plugs (replace if required).
15. Look for water in fuel tank, if in doubt, flush fuel tank and refill with new gas.
16. Look for water in brake system. Replace brake fluid as required.
17. Before starting engine, connect the vehicle to the latest version of BRP diagnostic software (B. U. D. S.) and check vehicle for fault codes.
18. Start the engine and allow it to run at idle speed until the engine reaches its operating temperature.
19. Stop the engine.
20. Change engine oil and filter.

NOTE:
Change oil as many times as necessary, until there is no whitish appearance in engine oil.

21. Check chaincase or gearbox oil. Replace oil if contaminated with water.
22. Lubricate suspension components.
23. Spray all metal parts with lubricant to prevent corrosion.

Lubricant and anti-corrosive

24. Test drive to confirm proper operation.

RIDING CONDITIONS AND YOUR SNOWMOBILE

Altitude

At factory, your snowmobile was calibrated to be used within an altitude range (relative to sea level).

A new snowmobile has a tag attached to the handlebar indicating its calibration. Refer to *Safety Information on Vehicle*.

If for any reason you don't know your snowmobile calibration, contact an authorized BRP snowmobile dealer.

If your snowmobile is to be used at an altitude outside the specified range, have it calibrated accordingly by an authorized BRP snowmobile dealer.

NOTICE

An inappropriate altitude calibration would decrease performance and may cause serious damage to the snowmobile.

Temperature

The engine management of these engines provides the optimum air/fuel ratio for all temperatures.

Hard Packed Snow

All models covered in this guide which are equipped with a minimum track profile of 44 mm (1.75 in) are built for deep snow conditions and should never be used during a prolonged period of time in marginal or hard packed snow conditions.

In the event you have to ride in these types of conditions:

- Avoid exceeding a speed of 70 km/h (45 mph) in all conditions
- Avoid hard acceleration (over 75% of throttle)
- Ice scratchers should be applied
- Engine temperature should not exceed 75% on the temperature gauge.

NOTICE

Running these types of tracks at high speed on a trail, on hard packed surfaces or on ice puts more stress on the lugs, which tends to heat up as a result. It also could drastically reduce the life of specific wear parts. To avoid potential degradation, delamination or damages to the track and wear parts, reduce your speed and minimize the distance that is being ridden on these types of surfaces.

Vehicles Equipped with Ice Scratchers

Ice scratchers are equipped on the vehicle to increase engine cooling efficiency, to lubricate and to cool track clips and sliders. They must be used whenever on ice, hard packed snow, or any conditions that do not lift enough snow particles into the rear suspension and the tunnel.

NOTICE

Although it is not recommended to ride a snowmobile equipped with a high lug profile track on trails or hard packed snow conditions, it is highly suggested to combine idler wheels and ice scratchers on a vehicle used in these conditions.

IMPORTANT

Ridding in these trail conditions puts the reliability of the track and its warranty at risk

If equipped with the following track profile heights, never exceed the recommended sustained vehicle speeds listed.

Track Profile Height	Maximum Sustained Speed
57 mm (2.25 in) 60 mm (2.36 in)	110 km/h (70 MPH)
64 mm (2.52 in) 75 mm (3 in)	95 km/h (60 MPH)

TUNE YOUR RIDE

Snowmobile handling and comfort depend upon multiple adjustments.

⚠ WARNING

Suspension adjustment could affect vehicle handling. Always take time to familiarize yourself with the vehicle's behavior after any suspension adjustment have been made. Always adjust LH and RH suspension components to the same setting.

Choice of suspension adjustments vary with carrying load, operator's weight, personal preference, riding speed and field condition.

NOTE:
Some adjustments may not apply to your snowmobile.

⚠ WARNING

Before proceeding with any suspension adjustment, remember:

- **Park in a safe place.**
- **Remove the tether cord cap from the engine cut-off switch.**
- **Use appropriate lifting device or have assistance to share lifting stress. If a lifting device is not used, use proper lifting techniques, notably using your legs force.**
- **Do not attempt to lift the front or rear of vehicle if it is above your limits.**
- **Support front of vehicle off the ground with a suitable device before adjusting suspension.**
- **Support rear of vehicle off the ground with a wide-base snowmobile stand with a rear deflector panel.**
- **Make sure support device is stable and secure.**

The best way to set up the suspension is to customize each adjustment one at a time. Various adjustments are interrelated. It may be necessary to readjust center spring after adjusting front springs for instance. Test run the snowmobile under the same conditions; trail, speed, snow, operator riding position, etc. Proceed methodically until you are satisfied.

Following are guidelines to fine-tune suspension. Use suspension adjustment tool provided in the tool kit.

Front Suspension Adjustments

Ski Stance

Skis can be set to three different widths.

To obtain the different widths, place the spacers:

– Inside the skis leg (narrowest ski stance setting: easiest to initiate turn on sidehills), or
– Outside the skis leg (widest ski stance setting: most stable on corners), or
– On each side (central setting: best steering accuracy on deep snow).

1. *Spacers*
2. *Axle*
3. *Stopper*
4. *Screw*
5. *Washer*
6. *Nut*

TIGHTENING TORQUE	
Ski nut	48 ± 6 Nm (35 ± 4 lbf-ft)

Front Springs

Front spring preload has an effect on front suspension firmness.

Front spring preload also has an effect on the steering behavior.

Action	Result
Increasing preload	Firmer front suspension

Action	Result
	Higher front end
	More precise steering
	More bump absorption capability
Decreasing preload	Softer front suspension
	Lower front end
	Lighter steering
	Less bump absorption capability

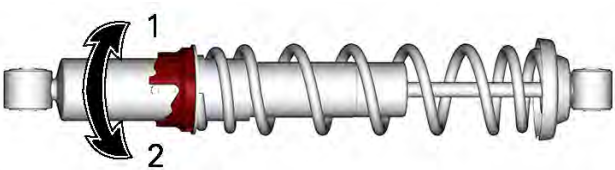
⚠ WARNING

Adjust both springs to the same preload. Uneven adjustment can cause poor handling and loss of stability, and/or control, and increase the risk of an accident.

For normal setting, refer to *Front Shock Absorber and Spring Setting*.

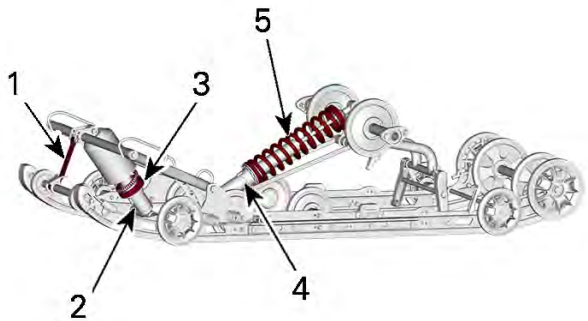
Cam Type Adjuster

Using the suspension adjustment tool provided in the tool kit, turn the cam to increase or decrease the spring preload.



1. *Increase preload*
2. *Decrease preload*

Rear Suspension Adjustments



1. *Stopper strap*
2. *Center shock absorber*
3. *Center spring*
4. *Rear shock absorber*
5. *Rear spring*

NOTICE

Whenever adjusting rear suspension, check track tension and adjust if necessary.

Stopper Strap – PPS2 DS/ DS+

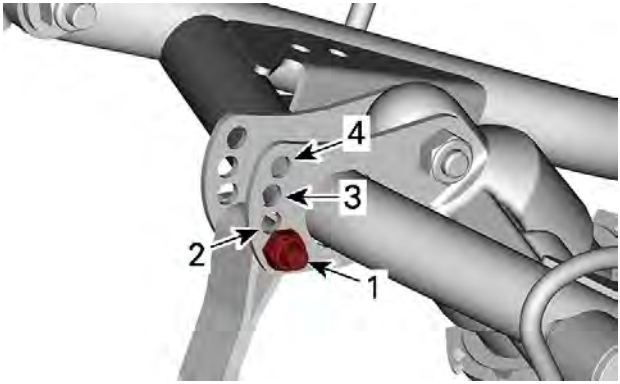
Stopper strap length has an effect on the amount of weight the center spring has to carry especially during acceleration, therefore on the front end uplift.

Stopper strap length also has an effect on center spring travel.

NOTICE

Whenever stopper strap length is changed, track tension must be checked.

NOTE:
Stopper strap can be set to position 1, 2, 3 or 4. Smaller numbers correspond to a longer strap setting.



STOPPER STRAP POSITIONS

1. *Position 1 (longest)*
2. *Position 2*
3. *Position 3*
4. *Position 4 (shortest)*

When operating the snowmobile in deep snow or hill climbing, it may be necessary to vary stopper strap length and/or riding position, to change the angle at which the track rides on the snow. Operator's familiarity with the various adjustments as well as snow conditions will dictate the most efficient combination.

Generally, a longer stopper strap setting gives better performance on a flat landscape and a shorter setting will improve handling in steep hill climbing and deep snow conditions.

Stopper Strap Setting	
Position	**use**
1	Boon docking: – Better bump absorption – Lighter and easier handling on flat landscape.
2	Normal setting: Best overall setting (General use)

Stopper Strap Setting	
Position	**use**
3	Hill climb: – Better track attack angle for hill climbing – Better maneuverability on deep snow and on sidehilling
4	Steep hill climb: – Better track attack angle for hill climbing – Less transfer – Lower ride height

Center Spring

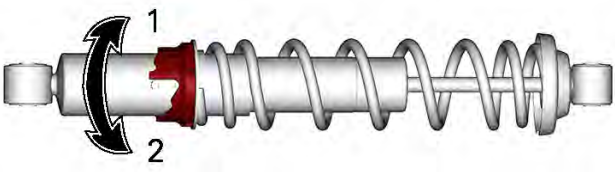
Center spring preload has an effect on steering effort, handling and bump absorption.

Also, since center spring preload adjustment puts more or less pressure on the front of the track, it has an effect on the performance in deep snow.

Action	Result
Increasing preload	Lighter steering
	More bump absorption capability
	Better deep snow starts
	Better deep snow performance and handling
Decreasing preload	Heavier steering
	Less bump absorption capability
	Better trail handling

Cam Type Adjuster

Using the suspension adjustment tool provided in the tool kit, turn the cam to increase or decrease the spring preload.



1. *Increase preload*
2. *Decrease preload*

Rear Spring

Rear spring preload has an effect on comfort, ride height and load compensation.

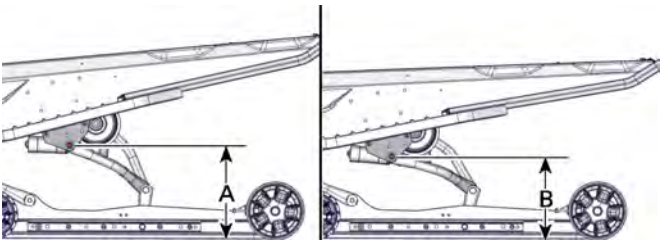
Also, adjusting rear spring preload shifts more or less weight to the snowmobile front end. As a result, more or less weight is applied to the skis. This has an effect on performance in deep snow, steering effort and handling.

Slight suspension bottoming occurring under the worst riding conditions indicates a good choice of spring preload.

Action	Result
Increasing preload	Firmer rear suspension
	Higher rear end
	More bump absorption capability
	Heavier steering
Decreasing preload	Softer rear suspension
	Lower rear end
	Less bump absorption capability
	Lighter steering
	Better deep snow performance and handling

Refer to the following to determine if preload is correct.

– A = Suspension fully extended
– B = Suspension has collapsed with operator, passenger(s) and load added
– C = Distance between dimension “A” and “B”, see table below



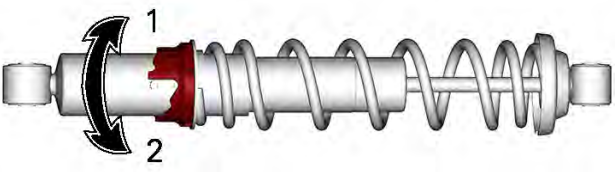
TYPICAL - DISTANCE BETWEEN GROUND AND UPPER REAR ARM PIVOT

C	What to do
90 to 100 mm (3.6 to 4 in)	No adjustment required
More than 100 mm (4 in)	Adjusted too soft. Increase preload
Less than 90 mm (3.6 in)	Adjusted too firm. Decrease preload

NOTE:
If the specification is unattainable with the original springs, visit an authorized BRP snowmobile dealer for other available springs.

Cam Type Adjuster

Using the suspension adjustment tool provided in the tool kit, turn the cam to increase or decrease the spring preload.



1. *Increase preload*
2. *Decrease preload*

Adjustment Tips According to Vehicle Behavior

Problem	Corrective Measures
Front suspension darting	Check ski alignment. – Reduce front suspension spring preload. – Increase center spring preload. – Reduce rear spring preload.
Steering feels too heavy at steady speeds	– Reduce front suspension spring preload. – Increase center spring preload.
Steering feels too heavy during acceleration	– Reduce rear spring preload. – Lengthen limiter strap.
Too much ski lift during cornering or acceleration	– Shorten limiter strap. – Increase rear spring preload.
Rear of snowmobile seems too stiff	– Reduce rear spring preload.
Rear of snowmobile seems too soft	– Increase rear spring preload.
Rear suspension is frequently bottoming	– Increase rear spring preload. – Increase center spring preload. – Lengthen limiter strap.

Problem	Corrective Measures
Snowmobile seems to pivot around its center	– Reduce center spring preload. – Increase rear spring preload. – Increase front suspension spring preload. – Shorten limiter strap.
Track spins too much at start	– Lengthen limiter strap. – Reduce rear spring preload. – Increase center spring preload.

MAINTENANCE

PERIODIC MAINTENANCE

Maintenance is very important to keep your vehicle in safe operating condition. The vehicle should be serviced as per the maintenance schedule.

Proper maintenance is the owner's responsibility. A warranty claim may be denied if, among other things, the owner or operator caused the problem through improper maintenance or use.

Perform periodic checks and follow the maintenance schedule. **The maintenance schedule does not exempt the pre-ride inspection**.

⚠ WARNING

Failure to properly maintain the vehicle according to the maintenance schedule and procedures can make it unsafe to operate.

Deep Snow/ Trail/ Crossover/ Utility Usage

Whether your vehicle is a Deep Snow, Trail, Crossover, or Utility model, these types of usage require maintenance tasks to be performed between the regular yearly intervals.

These are identified as Severe Vehicle Utilization in the chart below.

If you regularly ride **deep snow and perform frequent hill climbs**, follow the Severe Vehicle Utilization interval and perform the tasks outlined in the chart below.

If you regularly ride in **trails, explore the countryside, or work with your snowmobile**, follow the Severe Vehicle Utilization Trail / Crossover / Utility interval and perform the tasks outlined in the chart below.

Extreme Cold Condition

An engine that is frequently operated at or below an ambient temperature of -25 °C (-13 °F) will require an increase in service and maintenance schedule.

Any combustion engine operated at these low ambient temperature will collect an increased amount of condensation at every startup/ warm-up.

Since the engine is not reaching operating temperatures for extended periods of time, the oil is starting to be strongly diluted with water and gas residue (more water content).

An engine needs to reach operating temperature, in order to be able to evaporate condensate out of the oil.

If daily usage (work or leisure driving cycle) is similar to those mentioned below, BRP strongly recommends changing the oil at least once a month.

Parameters of an increase in service and maintenance schedule:

– Engine not reaching the proper operating temperature during normal daily usage
– Multiple starts and stops without reaching operating temperature
– Short idle periods
– Low RPM driving cycle in short distances without reaching operating temperature.

NOTE:
BRP strongly recommends the installation of a block heater to help warm up the liquids, this will also help to extend the oil lifetime.

Maintenance Schedule

IMPORTANT

For severe vehicle utilization (example: deep snow, frequent hill climbs, extreme cold weather operation, high idle time, etc.), the maintenance must be completed at 50% of the regular intervals.

Make sure to perform proper maintenance at recommended intervals as indicated in the tables.

The maintenance chart indicates the items needing to be addressed based on 2 criteria, whichever happens first:

– Calendar time
– Odometer reading.

Your driving habits determines the factors you shall adhere too. For example:

– Someone who uses their vehicle every other weekend trail riding with friends would most likely follow the **odometer reading** to determine the frequency of his maintenance.
– Someone who uses their vehicle seldomly over the year or only on a few occasions would follow the **calendar time** to determine the frequency of his maintenance.

IMPORTANT: The following tables show the appropriate maintenance application for the first 3 years. For subsequent years, repeat the same pattern alternatively.

600 EFI Engine

EVERY year or 3 000 km (1,900 mi)	
Body and frame	– Inspect and torque body panels and hardware – Lubricate pivots, latches, hinges and key barrels
Brake components and function*	– Inspect and lubricate brake components and function.
Continuously Variable Transmission (CVT)	– Inspect, lubricate and clean CVT components and function. – Inspect CVT drive belt condition. – Adjust CVT drive belt tension. – Torque drive pulley retaining screw.
Drive	– Adjust chaincase drive chain tension. – Inspect gearbox / chaincase oil level – Inspect and adjust track alignment and tension
Electrical	– Inspect battery connections and condition. – Inspect electrical harness routing. – Adjust headlight aim. – Inspect modules and applicable software updates.* – Inspect operation of control switches and lighting.

EVERY year or 3 000 km (1,900 mi)	
Engine and Cooling	– Inspect and adjust engine cooling components (coolant concentration, coolant level, hose condition, clamps, leaks).
Exhaust	– Inspect exhaust components (gaskets, pipes, muffler condition, leaks). – Torque exhaust manifold.
Air and Fuel Delivery	– Inspect fuel components (fuel cap, hoses, clamps and tank fixation) and function. – Perform leak test of the fuel tank and fuel vent system.*
Steering and Controls	– Inspect and adjust gearbox position lever operation (if equipped). – Inspect ski runners. – Inspect and adjust steering alignment. – Inspect steering components and function. – Adjust throttle cable. – Inspect throttle operation.

EVERY year or 3 000 km (1,900 mi)	
Suspension	– Inspect and lubricate suspension components and function.
*For an extensive list of maintenance actions to be performed, refer to your local dealership services.	

EVERY 2 years or 6 000 km (4,000 mi)	
Engine	– Replace spark plugs.
*For an extensive list of maintenance actions to be performed, refer to your local dealership services.	

ADDITIONAL MAINTENANCE INTERVALS		
Every 2 years	Brake fluid	– Replace brake fluid.*
Every 2 years or 6000 km (4,000 mi)	Engine	– Inspect engine rubber mount. – Clean and lubricate rewind starter (if equipped) – Replace spark plugs.
Every 3 years or 10 000 km (6,000 mi)		– Clean and inspect oil injection pump strainer.*
Every 2 years or 6000 km (4,000 mi)	Drive	– Replace gearbox / chaincase oil.

ADDITIONAL MAINTENANCE INTERVALS		
Every 5 years	Engine and Cooling	– Replace coolant.*
Every 5 years	Fuel delivery	– Replace in-line fuel filter.*

Severe Vehicle Utilization After the first 75 km (50 mi) then every 500 km (300 mi) up to then every 1500 km (1,000 mi)	
Drive	– Adjust chaincase drive chain tension. – Adjust track alignment and tension.
*For an extensive list of maintenance actions to be performed, refer to your local dealership services.	

Severe Vehicle Utilization Every Month or 1500 km (1,000 mi)	
CVT	– Inspect CVT drive belt condition. – Adjust CVT drive belt tension
Drive	– Inspect gearbox / chaincase oil level
Steering and Controls	– Inspect ski runners.
*For an extensive list of maintenance actions to be performed, refer to your local dealership services.	

MAINTENANCE PROCEDURES

This section includes instructions for basic maintenance procedures.

⚠ WARNING

Turn off the engine, remove tether cord cap and follow these maintenance procedures when performing maintenance. If you do not follow proper maintenance procedures you can be injured by hot parts, moving parts, electricity, chemicals or other hazards.

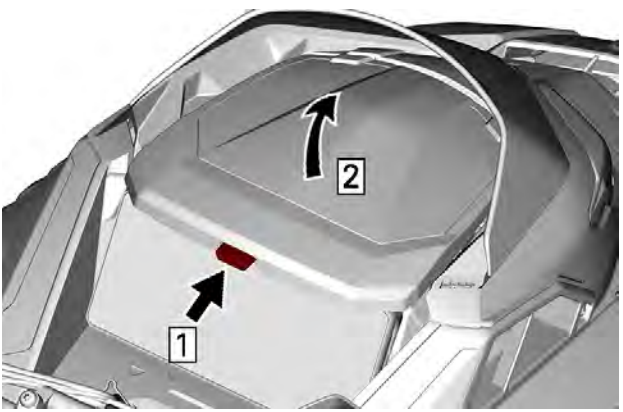
⚠ WARNING

Should removal of a locking device be required (e.g. lock tabs, self-locking fasteners, etc.) when undergoing disassembly/assembly, always replace with a new one.

Headlights

Headlights Beam Aiming

Open the storage compartment.



TYPICAL
Step 1. Push
Step 2. Lift

Turn the adjustment screw to reach desired beam height.

TYPICAL

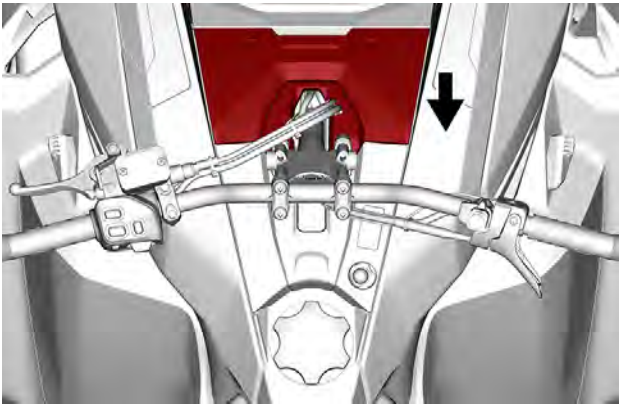
Engine Coolant

⚠ WARNING

Never open coolant tank cap when engine is hot.

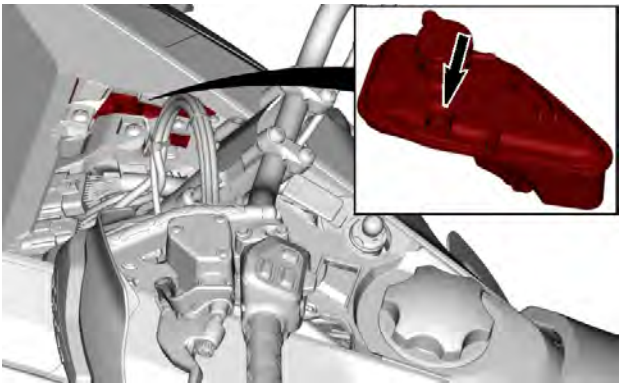
Verifying the Engine Coolant Level

1. Remove access panel.



TYPICAL

2. Check coolant level at room temperature. Liquid should touch the flat surface of the eyesight.

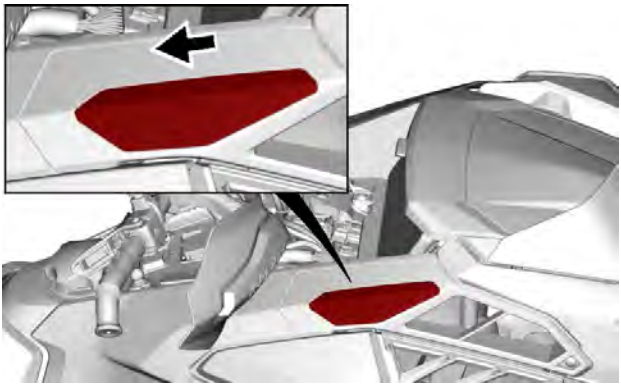


TYPICAL

3. Add coolant if required.

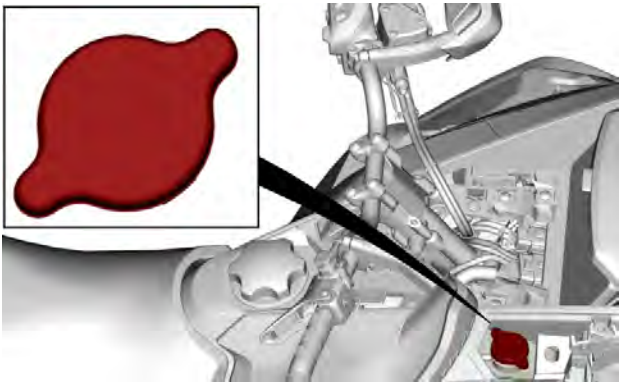
NOTE:
When checking level at low temperature it may be slightly lower than the mark.

4. Slide the air intake filter cap rearwards to unlock, then remove.



5. Remove the following fasteners then the RH air filter.

6. Add coolant by the filler neck.



7. If coolant level keeps dropping during or after each ride or if entire system has to be refilled, refer to an authorized BRP snowmobile dealer, repair shop or person of your own choosing for servicing.

Recommended Engine Coolant

RECOMMENDED COOLANT
XPS COOL-X LT Extended life pre-mixed coolant
IF THE RECOMMENDED XPS COOLANT IS NOT AVAILABLE
Use a coolant that meets or exceeds ASTM D3306 NAPS free (Nitrite, Amine, Phosphate, Silicate) Non 2-EH Acid

NOTICE

Always use ethylene-glycol antifreeze containing corrosion inhibitors specifically for internal combustion aluminum engines.

Exhaust System

Exhaust System Verification

The muffler tail pipe should be centered with the exit hole in the bottom pan. Exhaust system must be free of rust or leaks. Make sure that all parts are securely in place.

Check retaining springs and heat shields condition and replace if necessary.

The exhaust system is designed to reduce noise and to improve the total performance of the engine. Modification may be in violation of local laws.

NOTICE

If any exhaust system component is removed, modified or damaged, severe engine damage may result.

Spark Plugs

Spark plugs inspection or replacement may be performed by an authorized BRP snowmobile dealer, repair shop, or person of your own choosing. Spark plugs inspection or replacement requires an in-depth technical knowledge. Though not required, it is recommended that an authorized BRP snowmobile dealer performs spark plugs inspection or replacement.

Chaincase Oil

Recommended Chaincase Oil

Recommended Chaincase Oil
XPS Synthetic chaincase oil
Alternative or if not available
75W140 gear oil that meets the API GL-5 specification

NOTICE

If the recommended XPS chaincase oil is not available, use a 75W140 gear oil that meets the API GL-5 specification. The chaincase of this snowmobile has been developed and validated using the XPS™ Synthetic chaincase oil. BRP strongly recommends the use of its XPS Synthetic chaincase oil at all times. Damages caused by oil which is not suitable for the chaincase will not be covered by the BRP limited warranty.

Verifying the Chaincase Oil Level

With the vehicle on a level surface, check the oil level by removing the check plug.

CHECK PLUG

Oil level must reach the threaded hole.

If level is correct, reinstall check plug and tighten to the specified torque.

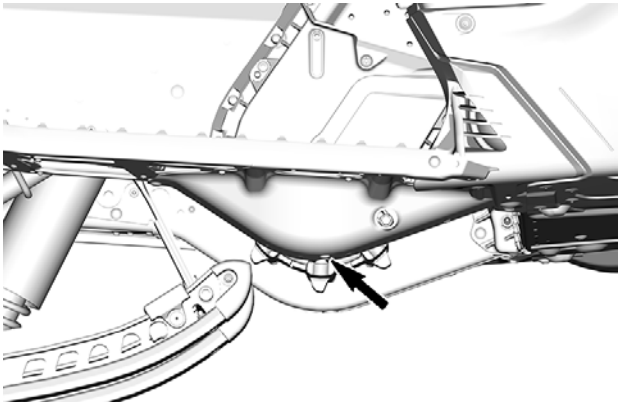
Tightening Torque	
Check plug	6 ± 1 Nm (53 ± 9 lbf-in)

If level is insufficient, refer to *Chaincase Filling Procedure*.

Replacing the Chaincase Oil

Draining the Chaincase Oil

1. Place the vehicle on a level surface.
2. Place a drain pan under the chaincase drain plug area.
3. Remove filler cap.
4. Remove the drain plug located at the bottom of the chaincase.



TYPICAL

5. Wait a while to allow all oil to drain out of the chaincase.
6. Install drain plug and tighten to specification.

Tightening Torque	
Chaincase drain plug	6 ± 1 Nm (53 ± 9 lbf-in)

Filling the Chaincase

1. Open the RH side panel. Refer to *Equipment*.
2. Remove the check plug.

TYPICAL

3. Remove the filler cap.

TYPICAL

4. Pour recommended oil in the filler hole until oil comes out by the check plug hole.
5. Reinstall check plug and tighten to specification.

Tightening Torque	
Check plug	6 ± 1 Nm (53 ± 9 lbf-in)

Reinstall the filler cap.

Drive Chain

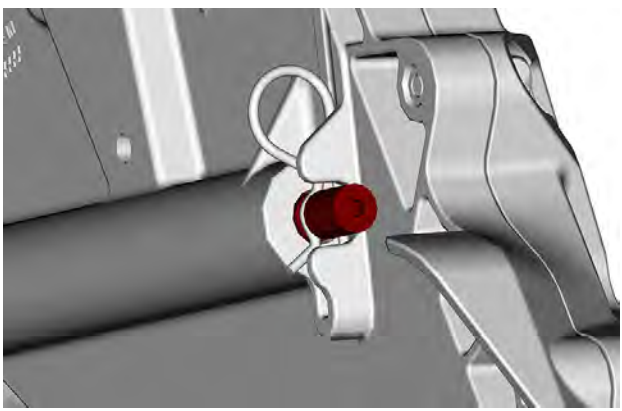
Access to Chaincase

Open RH side panel, refer to *Equipment*.

Adjusting the Drive Chain

1. Using the Torx end of the driven pulley expander, GENTLY turn tensioner clockwise to eliminate the play.

NOTE: Make sure the play is completely eliminated by trying to turn back and forth the driven pulley.



Do not force the tensioner in.

NOTICE

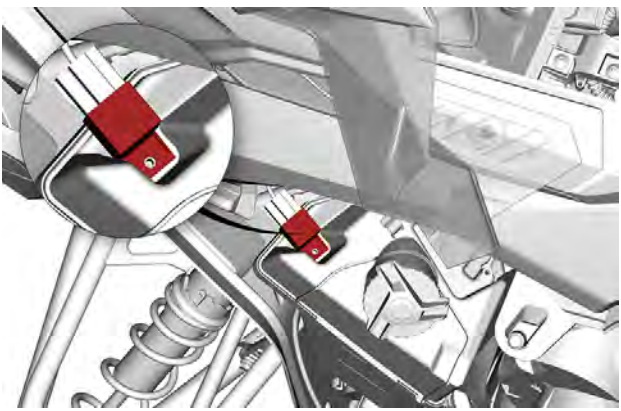
Overtightening the drive chain could result in severe damage to the chaincase components.

NOTE:
Do not remove the hair cotter pin.

Fuses and Relays

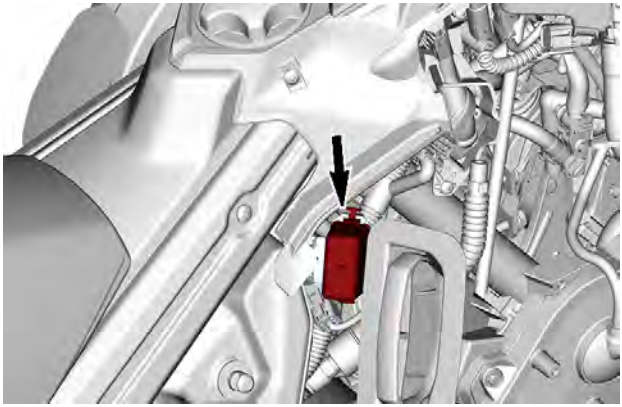
Fuse Locations

The fan relay is located behind the LH side panel, on top of the oil reservoir.



600 EFI — FAN RELAY

The fuse box 1 is located behind the RH side panel, in line with the fuel cap.



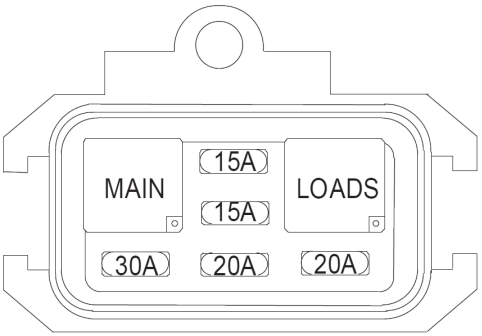
600 EFI — FUSE BOX 1 (FB1)

Fuse Description

Refer to labels located on the fuse box covers for correct identification.

NOTE:
In the event of any discrepancy between this document and the vehicle, the labels on the fuse boxes have precedence over the labels shown here.

Fuse Box 1 (FB1)

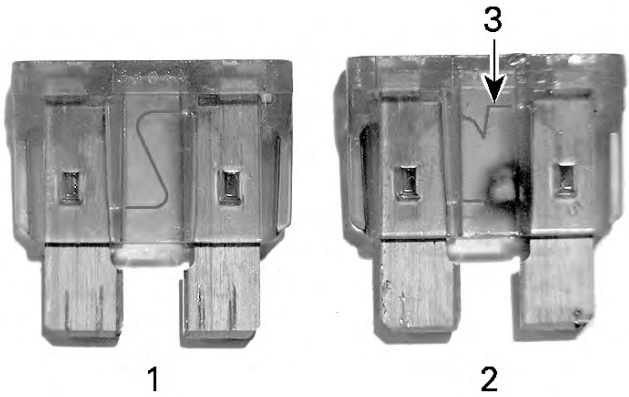


FB1 IDENTIFICATION DECAL – 600 EFI ENGINE

Inspecting a Fuse

Check fuse condition and replace it if necessary. Refer to *Replacing a Fuse*.

1. To remove fuse from holder, pull fuse out.
2. Check if filament is melted.

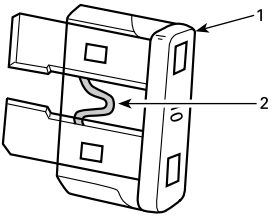


FUSE

1. *Good fuse*
2. *Blown fuse*
3. *Melted filament*

Replacing a Fuse

1. Set the ignition switch to OFF.
2. Pull the fuse out.
3. Check whether the filament is melted.



TYPICAL

1. *Fuse*
2. *Check if melted*

⚠ WARNING

If fuse has burnt out, source of malfunction should be determined and corrected before restarting. See an authorized BRP snowmobile dealer for servicing.

NOTICE

Using a higher-rated fuse can cause severe damage and may cause fires.

4. Replace the fuse with one with the same rating.
5. To close the fuse box covers, position covers over fuses and carefully push down until they click.
6. Close RH side panel, refer to *Body and Seat*.

Brake Fluid

Recommended Brake Fluid

Recommended Brake Fluid
XPS DOT 4 Brake Fluid
Alternative or if not available
DOT 4 Brake Fluid

Use only DOT 4 brake fluid from a sealed container. An opened container may be contaminated or may have absorbed moisture from the air.

⚠ WARNING

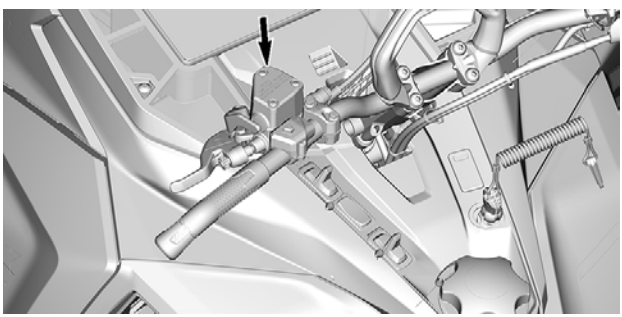
Use only DOT 4 brake fluid from a sealed container. To avoid serious damage to the braking system, do not use fluids other than the recommended one, nor mix different fluids for topping up.

Verifying the Brake Fluid Level

NOTICE

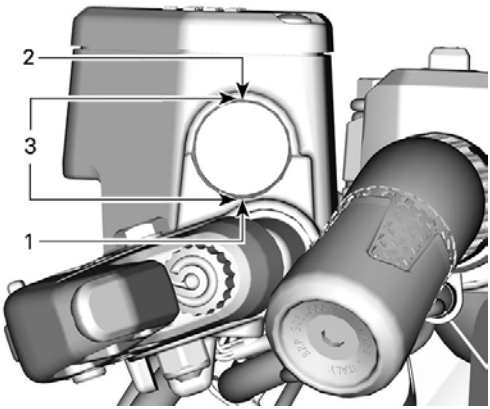
Vehicle must be on a level surface before checking any fluid levels.

1. Position the handlebar in the straight-ahead position to ensure the reservoir is level.
2. Check brake fluid in the reservoir for proper level.



TYPICAL

Brake fluid must always be above the MIN. line when brake lever is squeezed.



TYPICAL

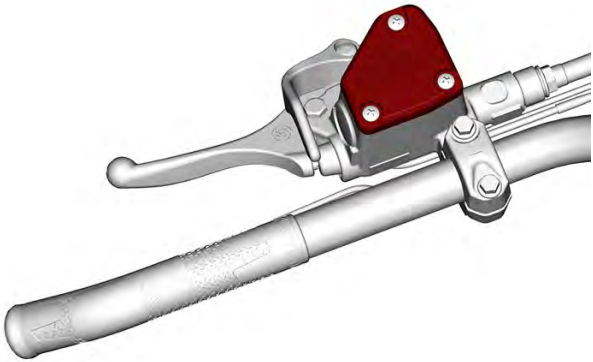
1. *Minimum*
2. *Maximum*
3. *Operating range*

Adding Brake Fluid

NOTICE

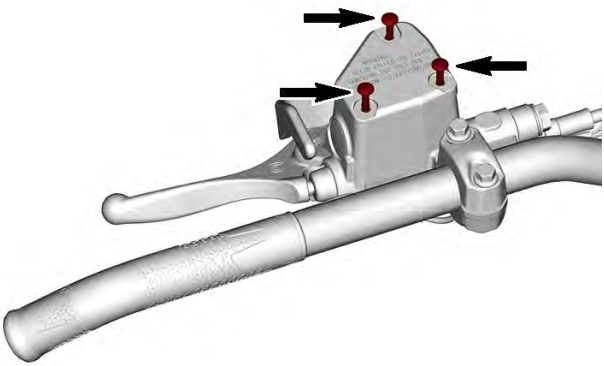
Vehicle must be on a level surface before checking any fluid levels.

1. Clean the reservoir cap area.



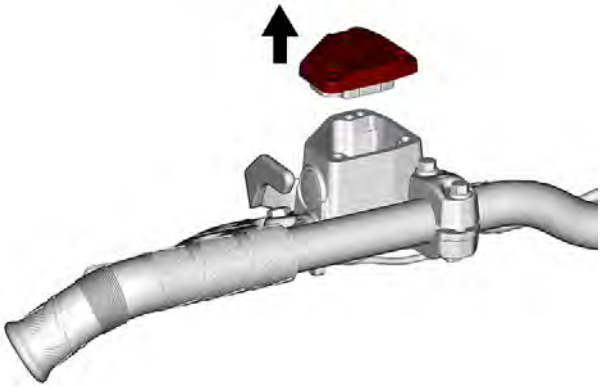
TYPICAL

2. Remove the screws retaining the reservoir cap.



TYPICAL

3. Remove the reservoir cap.



4. Add fluid as required. Do not overfill. Use only the recommended brake fluid.

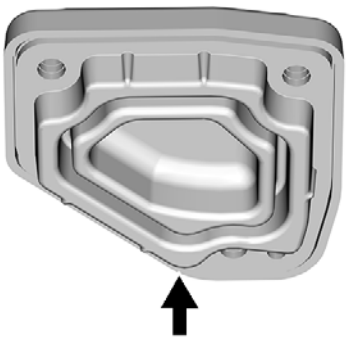
⚠ CAUTION

Avoid getting brake fluid on skin or eyes - it may cause severe burns. In case of contact with the skin, wash thoroughly. In case of contact with the eyes, immediately rinse with plenty of water for at least 10 minutes and then consult a doctor immediately.

NOTICE

- **Brake fluid can damage paint, rubber and plastic parts**
- **Protect these nearby parts with a rag when servicing the brake system**
- **Rinse thoroughly in case of spillage.**

5. Ensure the diaphragm is pushed in the reservoir cap before installing the cap on the reservoir.



6. Reinstall reservoir cap and screws. Tighten to specification.

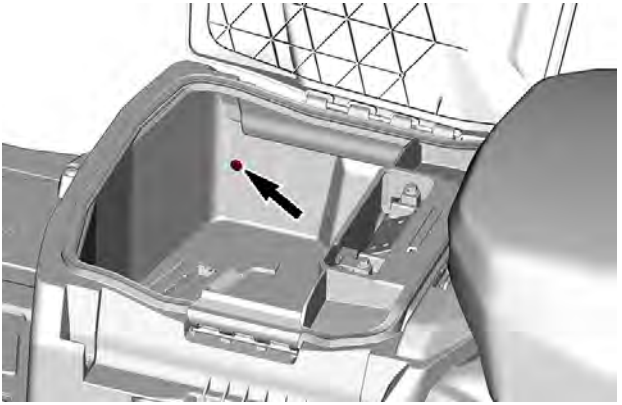
Tightening Torque	
Reservoir cap screws	0.7 ± 0.1 Nm (6 ± 1 lbf-in)

Battery

500 mm (20 in.) Tunnel Width

Removing the Battery

1. Remove the passenger seat and backrest, if equipped.
2. Open the cargo box, remove the battery cover and all mounting screws.

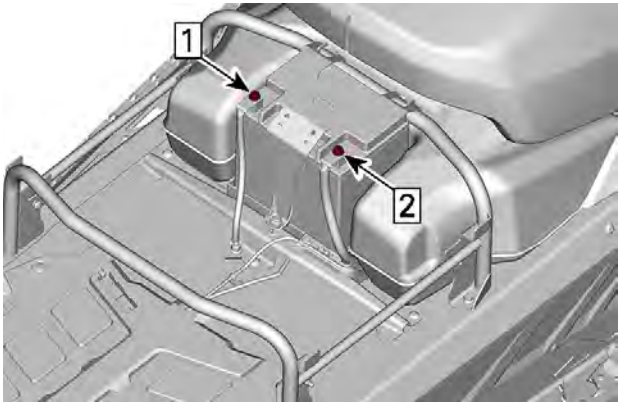


LH SIDE SCREW SHOWN

3. Remove the cargo box.

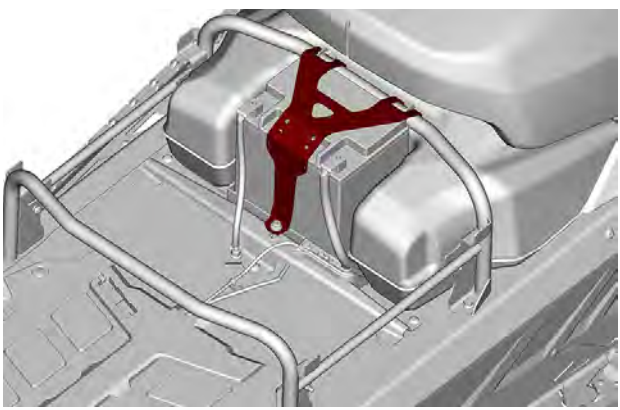
4. Disconnect the negative terminal first, then the positive terminal.

NOTICE
Battery BLACK (–) cable must always be disconnected first and connected last.

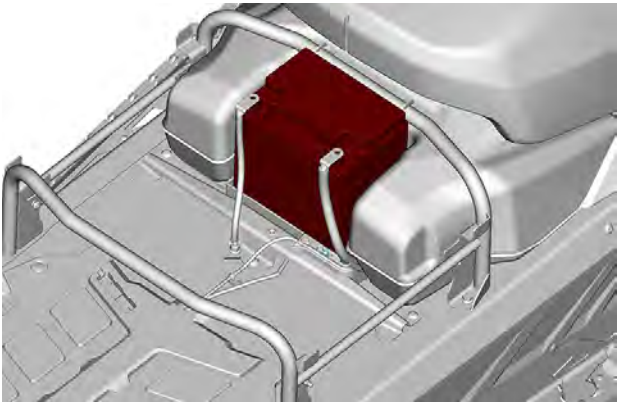


1. *Disconnect negative*
2. *Disconnect positive*

5. Remove the battery hold down bracket.



6. Remove the battery.



Installing the Battery

NOTICE

Battery BLACK (–) cable must always be disconnected first and connected last.

The installation is the reverse of the removal procedure. However, pay attention to the following details.

TIGHTENING TORQUE	
Battery terminals (positive and negative)	6 ± 5 Nm (53 ± 4 lbf-in)
Battery hold down bracket	5 ± 0.5 Nm (44 ± 4 lbf-in)
Battery cover retaining screws	1.5 ± 0.5 Nm (13 ± 4 lbf-in)

Cleaning the Battery

Clean battery casing and battery posts using a soft brush and a solution of baking soda and water.

Remove corrosion from battery cable terminals and battery posts using a firm wire brush.

Rinse with clear water then dry well.

Charging the Battery

Use any automotive type battery charger. Always refer to the battery charger manufacturer's instructions.

Drive Belt - 600 EFI Engine

Drive Belt Inspection

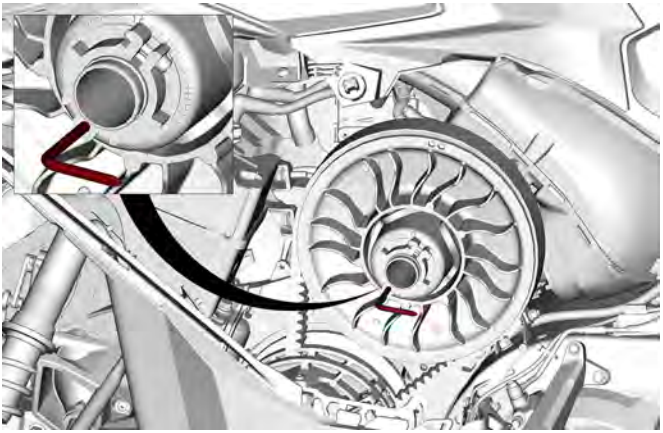
Remove the drive belt guard. Refer to the procedure in *Equipment*.

Inspect belt for cracks, fraying or abnormal wear (uneven wear, wear on one side, missing cogs, cracked fabric). If abnormal wear is noted, probable cause could be pulley misalignment, excessive RPM with frozen track, fast starts without warm-up period, burred or rusty sheave, oil on belt or distorted spare belt. Contact an authorized BRP snowmobile dealer.

Replacing the Drive Belt

Removing the Drive Belt

1. Remove the tether cord cap from engine cut-off switch.
2. Remove the LH side panel.
3. Remove the drive belt guard. Refer to *Removing the Drive Belt Guard*.
4. Insert the driven pulley expander provided, in the threaded hole on the adjuster hub as shown.



TYPICAL - PULLEY EXPANDER INSTALLED ON ADJUSTER HUB

5. Open the driven pulley by screwing the tool in.
6. Remove the drive belt by slipping it over the edge of the driven pulley, then over the drive pulley.

Installing the Drive Belt

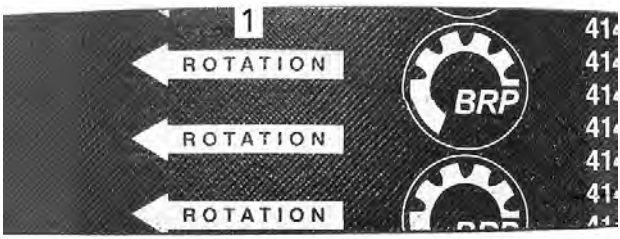
The driven pulley must be expanded. Refer to *Removing the Drive Belt*.

1. Slip the belt over the drive pulley, then over the driven pulley.

NOTICE

Do not force or use tools to pry the belt into place, as this could cut or break the cords in the belt.

NOTE:
The maximum drive belt life span is obtained when belt is installed with arrows in the direction of rotation.



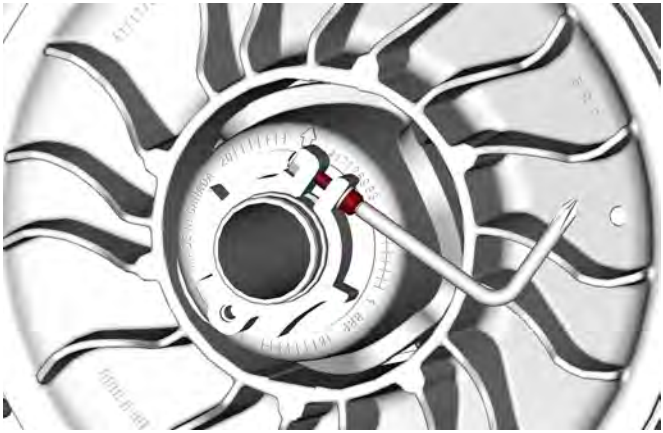
1. To be pointed in the direction of rotation

2. Unscrew and remove the driven pulley expander from the pulley.
3. Rotate the driven pulley several times to properly set the belt between the sheaves.
4. If a new belt was installed, an adjustment will be required for the proper belt height. Refer to *Adjusting the Drive Belt Height*.
5. Install belt guard.
6. Close side panel.

Adjusting the Drive Belt Height

The drive belt height must be checked every time a new drive belt is installed and as part of the pre-ride inspection.

1. Remove the tether cord cap from engine cut-off switch.
2. Remove the LH side panel.
3. Remove the drive belt guard.
4. Loosen the clamping screw.



5. Using the suspension adjustment tool provided in the tool kit, turn the adjustment ring 1/4 turn at a time then rotate the driven pulley to properly set the belt between the pulley sheaves.

NOTE:
The adjustment ring has left hand treads.

NOTE:
Turning the adjustment ring counterclockwise lowers the belt in the pulley. Turning the ring clockwise raises the belt in the pulley.

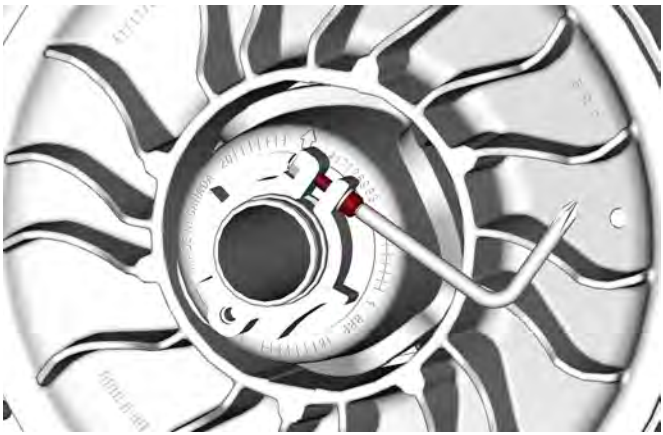
6. Repeat until the drive belt outer surface is even with the driven pulley edge.

PRELIMINARY SETTING

1. Drive belt outer surface is even with the driven pulley edge

7. Tighten the adjustment ring clamping screw.

Tightening Torque	
Adjustment ring clamping screw	5.5 ± 0.5 Nm (49 ± 4 lbf-in)



8. Install belt guard, refer to *Installing the Drive Belt Guard*.
9. Install LH side panel.
10. Start engine and check if vehicle creeps.
11. If vehicle does not creep, adjustment is complete.
12. If vehicle creeps, check the drive belt deflection.

Reverse Activation (if equipped)

Reverse may not activate or may be harder to activate if the belt is positioned too high in the driven pulley. If reverse activation does not work properly, ensure the drive belt is properly adjusted.

Adjust the drive belt lower in the driven pulley if needed.

Drive Pulley

Drive Pulley Adjustment (if equipped)

⚠ WARNING

Remove tether cord cap from engine cut-off switch before performing any adjustment. Vehicle must be parked in a safe place, away from the trail.

⚠ WARNING

NEVER disassemble or modify the drive pulley.
Improper assembly or modifications could cause the pulley to explode violently under the stress generated by the high rotational speed.
Visit your BRP snowmobile dealer to maintain or service the drive pulley. Improper servicing or maintenance may affect performance and reduce belt life. Always respect maintenance schedules.

The drive pulley is factory calibrated to transmit maximum engine power at a predefined RPM. Factors such as ambient temperature, altitude or surface condition may vary this critical engine RPM thus affecting snowmobile efficiency.

This adjustable drive pulley allows setting maximum engine RPM to maintain maximum power.

Ramp cams should be adjusted so that actual maximum engine RPM matches the maximum horsepower RPM. Refer to *Technical Specifications (Engine)*.

NOTE:
Use a precision digital tachometer for engine RPM adjustment.

There are 5 positions in which the ramp cam can be set.

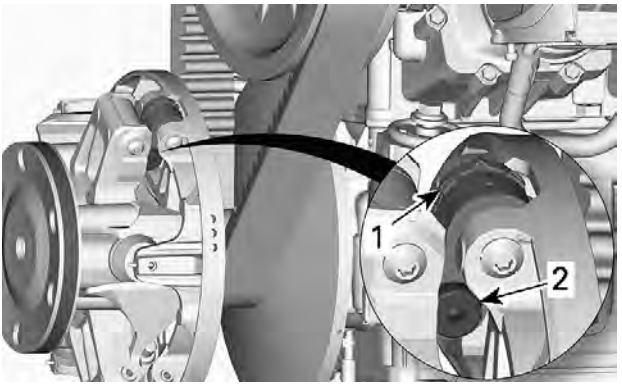
Each position modifies the maximum engine RPM by about 200 RPM.

Lower position numbers decrease engine RPM in steps of 200 RPM and higher position numbers increase it in steps of 200 RPM.

Procedure

1. Refer to *Body and Seat* in *Vehicle Information* and remove:
   - LH side panel
   - Drive pulley guard

2. Locate the cam and the pivot screw on the drive pulley.

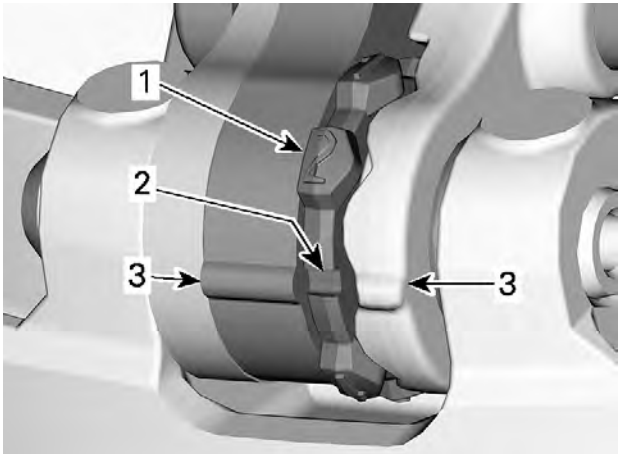


TYPICAL

1. Cam
2. Pivot screw

The cam position is identified as follows:

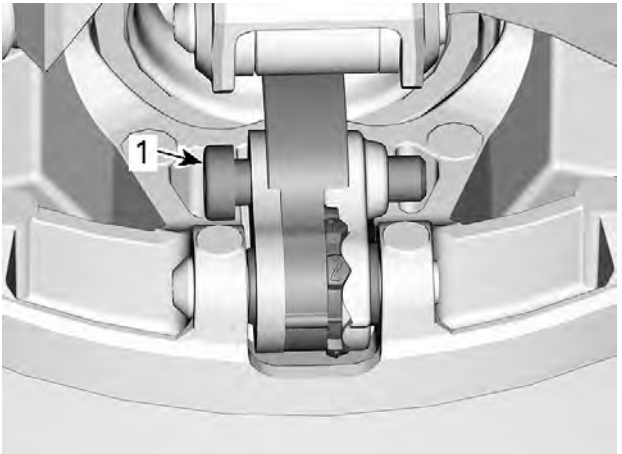
- Positions 1, 2, 4 and 5 are numbered.
- Position 3 (middle) is identified by a notch.
- There are notches on each side of the cam used as pointers.



1. *Numbered position*
2. *Position 3 - Notch*
3. *Pointers*

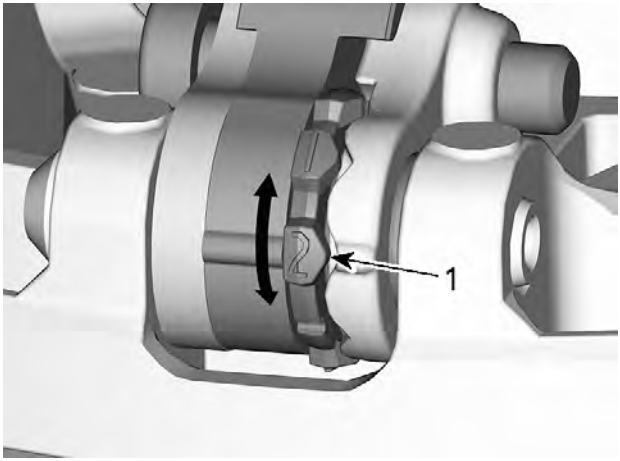
To adjust, proceed as follows for all 3 cams:

3. Using the Allen end of the driven pulley expander, loosen the pivot screw.



1. Pivot screw

4. Move the right lever aside to be able to turn the cam.
5. Turn cam to the desired position.



1. Desired cam position (here #2)

6. Tighten the pivot screw.

TIGHTENING TORQUE	
Pivot	8 ± 1 Nm (71 ± 9 lbf-in)

NOTICE

Always adjust all 3 cams to the same setting.

Skis

Wear and Condition of Skis and Runners

Check the condition of the skis and ski runner carbides. If worn, contact an authorized BRP snowmobile dealer.

⚠ WARNING

Excessively worn skis and/or ski runners will adversely affect snowmobile control.

Suspension

Rear Suspension Condition

Visually inspect all suspension components including slider shoes, springs, wheels, etc.

NOTE:
During normal driving, snow will act as a lubricant and coolant for the slider shoes. Extensive riding on ice or sanded snow, will create excessive heat build-up and cause premature slider shoe wear.

Suspension Stopper Strap Condition

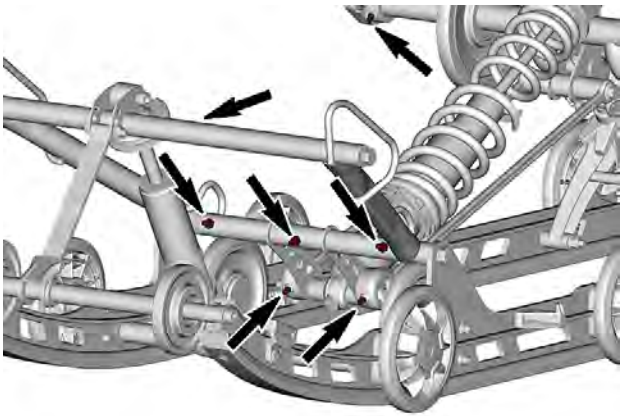
Inspect stopper straps for wear and cracks, bolt and nut for tightness. If loose inspect holes for deformation. Replace as required. Tighten nut to specification.

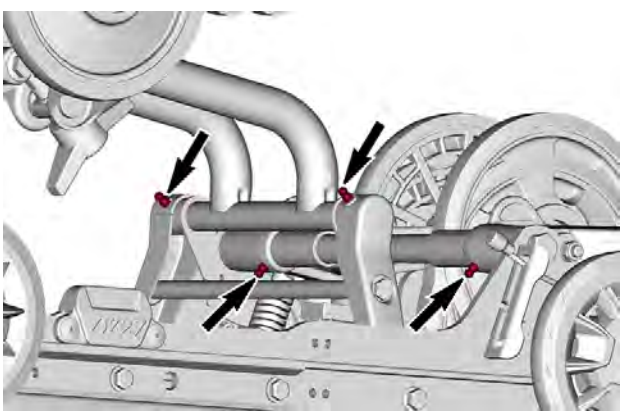
Tightening Torque	
Stopper strap nut	7 ± 1 Nm (62 ± 9 lbf-in)

Suspension Lubrication – EasyRide+

Lubricate the following suspension pivots at grease fittings. Refer to *Maintenance Schedule* for maintenance frequency.

Suspension Grease
XPS Synthetic suspension grease





Steering and Front Suspension Condition

Visually inspect steering and front suspension for tightness of components (steering arms, control arms and links, tie rods, ball joints, ski bolts, ski legs, etc.). If necessary, contact an authorized BRP snowmobile dealer.

Track

Track Condition

⚠ WARNING

Remove tether cord cap from engine cut-off switch before performing any maintenance or adjustment, unless otherwise specified. Vehicle must be parked in a safe place, away from the trail.

Remove tether cord cap from engine cut-off switch.

Lift the rear of the snowmobile and support it with a wide-base snowmobile mechanical stand with a rear deflector panel. With the engine off, rotate the track by hand, and inspect condition. If worn or cut, or if track fibers are exposed, or if missing or defective inserts or guides are noted; contact an authorized BRP snowmobile dealer.

Snowmobiles Equipped with Traction Enhancing Products

If your snowmobile is equipped with a BRP approved studded track, PROCEED WITH A VISUAL INSPECTION OF YOUR TRACK BEFORE EACH USE.

Look for any defects, such as:

- Perforations in the track
- Tears in the track (particularly around traction holes on studded tracks)
- Lugs that are broken or torn off, exposing portions of rods
- Delamination of the rubber
- Broken rods
- Broken studs (studded tracks)
- Bent studs (studded tracks)
- Missing studs
- Studs that are torn off the track
- Missing track guide(s)
- Also, ensure that studs nut are tighten to the recommended torque.

On approved studded tracks, replace broken or damaged studs immediately. If your track shows signs of deterioration, it must be replaced immediately. When in doubt, ask your dealer.

⚠ WARNING

Riding with a damaged track or studs could lead to a loss of control.

For complete information on traction enhancing products, refer to *TRACTION ENHANCING PRODUCTS* in *SAFETY INFORMATION* at the beginning of this Operator's Guide.

Track Tension and Alignment

NOTE:
Track tension and alignment are interrelated. Do not adjust one without the other.

⚠ WARNING

To prevent serious injury to individuals near the snowmobile:

- **NEVER stand behind or near a moving track.**
- **Always use a wide-base snowmobile stand with a rear deflector panel if it is necessary to rotate track.**
- **When the track is raised off the ground, only run it at the lowest possible speed.**

Centrifugal force could cause debris, damaged or loose studs, pieces of torn track, or an entire severed track to be violently thrown backwards out of the tunnel with tremendous force, possibly resulting in the loss of a leg or other serious injury.

Verifying the Track Tension

NOTE:
Ride the snowmobile in snow about 15 to 20 minutes prior to adjusting track tension.

1. Remove tether cord cap from engine cut-off switch.
2. Lift rear of vehicle and support it off the ground.

⚠ CAUTION

Use proper lifting techniques, notably using your legs force. Do not attempt to lift the rear of vehicle if it is above your limits.

3. Allow rear suspension to fully extend.
4. Prepare the tensiometer.

Service tool	
Tensiometer (P/N 414348200)	

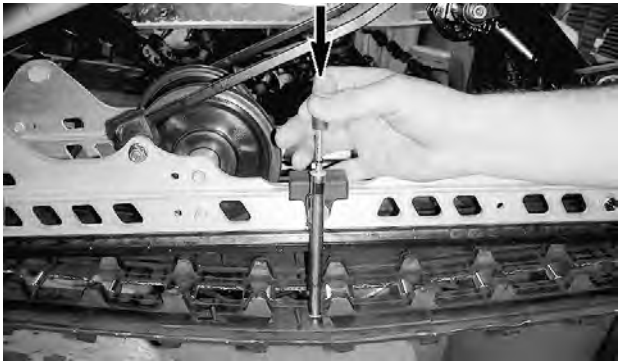
1. Set the bottom O-ring as per the *Track Deflection* from the applicable vehicle in the *Technical Specifications* table.

1. Bottom O-ring

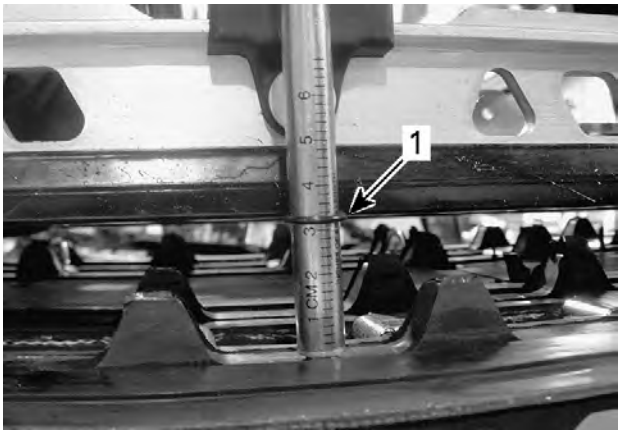
2. Place the upper O-ring to 0 kgf (0 lbf).

1. Upper O-ring

5. Position the tensiometer on track, halfway between front and rear idler wheels.
6. Push the tensiometer downwards until bottom O-ring (deflection set earlier) be aligned with the bottom of slider shoe.



TYPICAL



TYPICAL

1. Deflection O-ring aligned with slider shoe

7. Read load recorded by the upper O-ring on the tensiometer.

TYPICAL - LOAD READING

1. Upper O-ring

8. Load reading must be as per the track deflection in the *Technical Specifications*.
9. If load reading is not in accordance with the specification, adjust track tension. Refer to *Track Tension Adjustment*.

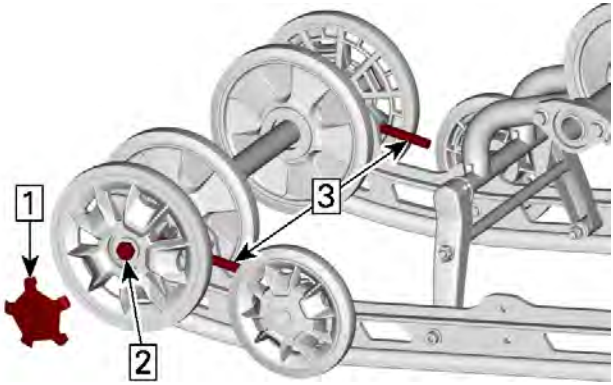
Adjusting the Track Tension – EasyRide+

1. Remove the tether cord cap from engine cut-off switch.
2. Lift rear of vehicle and support it off the ground.

⚠ CAUTION

Use proper lifting techniques, notably using your legs force. Do not attempt to lift the rear of vehicle if it is above your limits.

3. Allow rear suspension to fully extend.
4. Remove rear wheel caps.
5. Loosen the rear idler wheels retaining screws.
6. Tighten or loosen both adjustment screws to increase or decrease track tension.



EASYRIDE+ FT

1. *Remove cap*
2. *Loosen the idler wheel screw*
3. *Loosen or tighten adjustment screws*

7. If correct tension is unattainable, contact an authorized BRP snowmobile dealer.
8. Retighten idler wheels retaining screws to specification.

TIGHTENING TORQUE	
Idler wheel screw	48 ± 6 Nm (35 ± 4 lbf-ft)

9. Check track alignment as described below.

Track Alignment

⚠ WARNING

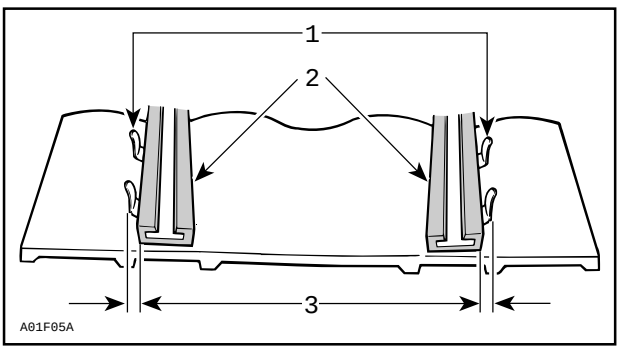
Before checking track alignment, ensure that the track is free of all particles which could be thrown out while track is rotating. Keep hands, tools, feet and clothing clear of track. Always lift the snowmobile on a wide-base stand with a rear deflector panel. Ensure no one is standing in close proximity to the snowmobile, especially at the rear of the track. Never rotate track at high speed.
Centrifugal force could cause debris, damaged or loose studs, pieces of torn track, or an entire severed track to be violently thrown backwards out of the tunnel with tremendous force.

1. Lift rear of vehicle and support it off the ground.

⚠ CAUTION

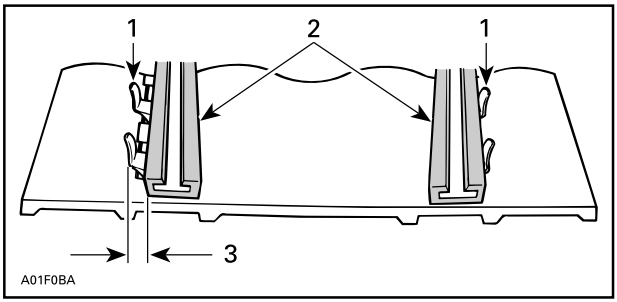
Use proper lifting techniques, notably using your legs force. Do not attempt to lift the rear of vehicle if it is above your limits.

2. Start engine and accelerate slightly so that track slowly turns. This must be done in a short period of time (15 to 20 seconds).
3. Check that the track is well centered; equal distance on both sides between edges of track guides and slider shoes.



1. Guides
2. Slider shoes
3. Equal distance

4. To correct track alignment:



1. *Guides*
2. *Slider shoes*
3. *Tighten on this side*

1. Stop engine.
2. Remove tether cord cap from engine cut-off switch.

⚠ WARNING

Remove tether cord cap from engine cut-off switch before performing any maintenance or adjustment, unless otherwise specified. Vehicle must be parked in a safe place, away from the trail.

3. Loosen the rear axle nut.
4. Tighten adjustment screw on side where the slider shoe is the farthest from the track insert guides.
5. Tighten the rear axle nut.

⚠ WARNING

Properly tighten wheel retaining bolt, otherwise wheel may come off and cause track to "lock".

6. Restart engine and rotate track slowly to recheck alignment.
7. Tighten the rear axle nut to specified torque.

TIGHTENING TORQUE	
Rear idler wheel screws (M8)	24.5 ± 3.5 Nm (18 ± 3 lbf-ft)
Rear idler wheel screws (M10)	48 ± 6 Nm (35 ± 4 lbf-ft)

8. Reposition snowmobile on the ground.

Post-Operation Care

Remove snow and ice from rear suspension, track, front suspension, steering mechanism and skis.

⚠ WARNING

Make sure D.E.S.S. key is removed from D.E.S.S. post before standing in front the vehicle, getting close to the track or rear suspension components.

Always cover your snowmobile when leaving it outside overnight or during extended periods of inactivity. This will protect it from frost and snow as well as help retain its appearance.

Vehicle Cleaning and Protection

Wash snowmobile using water mixed with a mild detergent.

Use only microfiber cloths or an equivalent.

NOTICE

Never use a high pressure washer to clean the vehicle. Use low pressure only, like a garden hose.

Non Compatible Cleaning Products

Material Type	Non-Compatible Cleaning Products
All plastics, vinyls, painted steel and aluminium	BRAKE AND PARTS CLEANER OR ANY PETROLEUM BASE CLEANING PRODUCTS

Compatible Cleaning Products

Material Type	Cleaning Product
All plastics, vinyls, painted steel and aluminium.	Automotive type soap with water XPS Spray Cleaner and Polish XPS All Purpose Cleaner

For more information and products, Visit the XPS Products website at www.xpslubricants.com

STORAGE

During summer, or when a snowmobile is not in use for more than three months, proper storage is necessary.

Storage
Clean the vehicle
Add fuel stabilizer to fuel following the product manufacturer recommendations. Run the engine after adding the product to the fuel
Lubricate engine
Lubricate brake lever pivot
Lubricate rear suspension
Charge battery monthly to keep it fully charged during storage
Block muffler outlet with rags
Lift rear of vehicle until track is clear of the ground. Do not release track tension

⚠ CAUTION

Use appropriate lifting device or have assistance to share lifting stress. If a lifting device is not used, use proper lifting techniques, notably using your legs force. Do not attempt to lift the rear of vehicle if it is above your limits.

NOTICE

The snowmobile has to be stored in a cool and dry place and covered with an opaque but ventilated tarpaulin. This will prevent sun rays and grime from affecting plastic components and vehicle finish.

NOTICE

Fuel stabilizer should be added prior to engine lubrication to ensure carburetor protection against varnish deposits.

Engine Storage Procedure

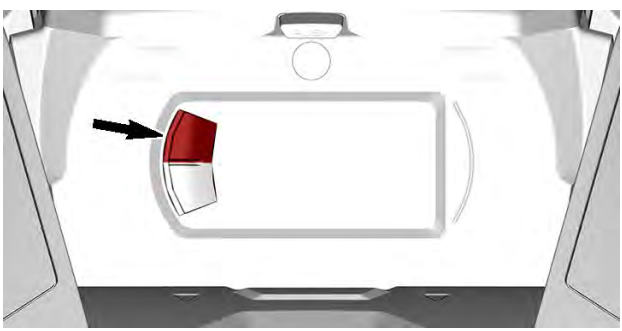
The engine has to be properly lubricated at storage for internal parts protection.

EFI and E-TEC Engine - 4.5" Display

Follow these simple steps.

To engage the procedure, do the following:

1. Place the vehicle in a well ventilated area.
2. Start the engine and let it run at idle speed until it reaches its operating temperature (watch the coolant temperature on the display or verify the rear heat exchanger becomes warm). The engine temperature must be above 36 °C (97 °F).
3. Push the TRIP (T) button to select odometer mode.



NOTE:
The storage mode does not function in other modes (trip A, trip B and hr trip).

4. Repeatedly depress the HI/LOW beam switch rapidly, then, **while doing this**, press and hold the **TRIP button** until PRESS/HOLD BUTTON FOR OIL INJECTION appears on the display.

TYPICAL

5. Release all buttons when gauge displays **PRESS/HOLD BUTTON FOR OIL INJECTION** appears.
6. Again, press and hold the TRIP (T) button for 2 - 3 seconds.

NOTE:
The gauge will display OIL when the storage procedure is initiated.

7. When gauge displays **OIL**, release button and wait for the lubrication function to end.

TYPICAL

Do not touch anything during engine lubrication cycle.

The engine lubrication function takes approximately 1 minute. During this time the engine RPM will increase slightly to approximately 1600 RPM and the oil pump will "oil flood" the engine.

At the end of engine lubrication procedure, the ECM will turn the engine off.

Remove tether cord cap from engine cut-off switch.

NOTICE

Do not start the engine during storage period.

PRESEASON PREPARATION

Proper vehicle preparation is necessary when a vehicle has not been used for more than three months.

Using the *maintenance schedule*, perform the items titled *EVERY YEAR AT PRESEASON*.

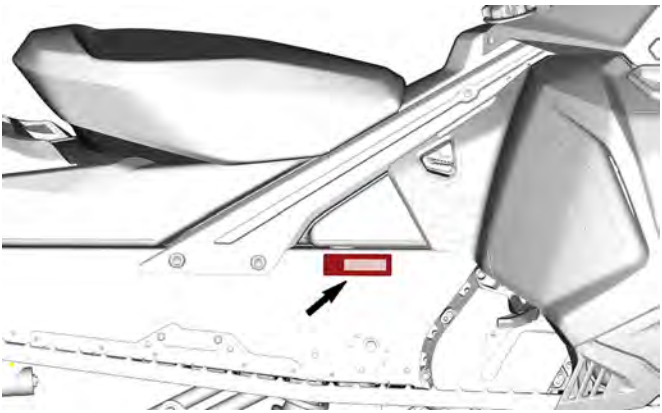
Visit your authorized BRP snowmobile dealer for more information.

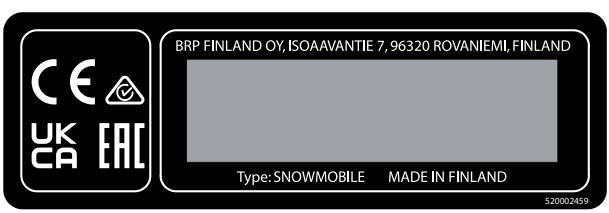
TECHNICAL INFORMATION

VEHICLE IDENTIFICATION

Vehicle Description Decal

Vehicle description decal is located on right hand side of tunnel.





FOR EUROPEAN MARKET

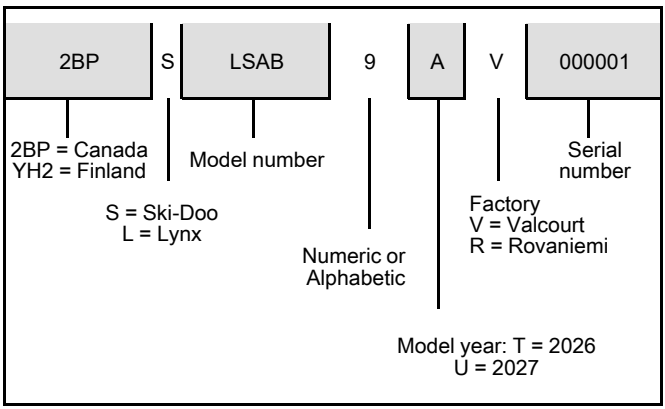
Identification Numbers

The main components of your snowmobile (engine and frame) are identified by different identification numbers. It may sometimes become necessary to locate these numbers for warranty purposes or to trace your snowmobile in the event of loss. These numbers are required by the authorized BRP snowmobile dealer to complete warranty claims properly. We strongly recommend that you take note of all the identification numbers on your snowmobile and supply them to your insurance company.

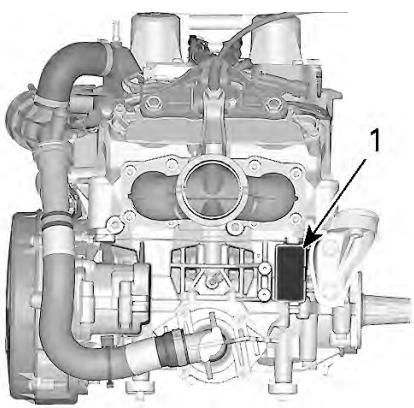
Vehicle Identification Number (VIN)

VIN is scribed on vehicle description decal. See above. It is also engraved on tunnel near vehicle description decal.

Model number and model year are part of the information found in the VIN. See illustration.



Engine Identification Number Location



TYPICAL

COMPLIANCE LABELS

SSCC Label

Safety standards for snowmobiles have been adopted by the Snowmobile Safety and Certification Committee (SSCC) of which BRP is a proud participating member. Assurance that your snowmobile meets these standards is easily checked by locating the Certification Label on a right vertical portion of the vehicle.

The following label shows that an independent testing laboratory has verified compliance with the SSCC safety standards.

BRP RF DESS POST GEN3 (MOWP)

USA and Canada

This device complies with FCC Part 15 and Industry Canada license exempt RSS standard (s). Operation is subject to the following two conditions:

1. this device may not cause interference, and
2. this device must accept any interference, including interference that may cause undesired operation of the device.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

– Reorient or relocate the receiving antenna.
– Increase the separation between the equipment and receiver.
– Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
– Consult the dealer or an experienced radio/TV technician for help.

The device has been evaluated to meet general RF exposure requirement. The device can be used in portable exposure condition without restriction.

Le dispositif a été évalué à satisfaire l'exigence générale de l'exposition aux rf. L'appareil peut être utilisé dans des conditions d'exposition portatif sans restriction.

L'émetteur/récepteur exempt de licence contenu dans le présent appareil est conforme aux CNR d'Innovation, Sciences et Développement économique Canada applicables aux appareils radio exempts de licence.

1. l'appareil ne doit pas produire de brouillage, et
2. l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

BRP RF DESS POST GEN3 (CAN)

USA and Canada

This device complies with FCC Part 15 and Industry Canada license exempt RSS standard(s). Operation is subject to the following two conditions:

1. this device may not cause interference, and
2. this device must accept any interference, including interference that may cause undesired operation of the device.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

– Reorient or relocate the receiving antenna.
– Increase the separation between the equipment and receiver.
– Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
– Consult the dealer or an experienced radio/TV technician for help.

The device has been evaluated to meet general RF exposure requirement. The device can be used in portable exposure condition without restriction.

Le dispositif a été évalué à satisfaire l'exigence générale de l'exposition aux rf. L'appareil peut être utilisé dans des conditions d'exposition portatif sans restriction.

L'émetteur/récepteur exempt de licence contenu dans le présent appareil est conforme aux CNR d'Innovation, Sciences et Développement économique Canada applicables aux appareils radio exempts de licence.

1. l'appareil ne doit pas produire de brouillage, et
2. l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

IC: 12006A-1001317030 For variant 1001316154 (CAN)

FCC ID: 2ACER 1001317030 For variant 1001316154 (CAN).

TECHNICAL SPECIFICATIONS

ENGINE

Engine - 600EFI

Engine	
Engine type	Rotax 600 EFI liquid cooled with reed valves
Number of cylinder	2
Bore	72.3 mm (2.846 in)
Stroke	73.0 mm (2.874 in)
Displacement	599.4 cm³ (36.58 in³)
Compression ratio	12.50 ± 0.3
Combustion chamber volume	26.05 cc ± 0.93
Maximum power engine speed	7400 ± 100 RPM

LUBRICATION SYSTEM		
Oil injection pump type		Electronic oil injection pump
Injection oil	Type	XPS 2-stroke synthetic blend oil (semi-synthetic)
	Quantity	3.4 l (115 fl oz (US))

Fuel System	
Fuel delivery	Electronic fuel injection
Idle speed (not adjustable)	1500 ± 200 RPM

Electrical System		
Lighting system output		580 W @ 6000 RPM
Spark plug	Type	BPR8ES
	Gap	Not adjustable 0.6 to 0.7 mm (.024 to .028 in)

VEHICLE

59 Ranger

COOLING SYSTEM		
Coolant type	Recommended XPS coolant	XPS Extended life pre-mixed coolant
	If the recommended product is not available	OAT-type long life antifreeze and distilled water (50% distilled water, 50% antifreeze) or coolant specifically formulated for aluminum engines
Coolant capacity		8.6 l (9.0 qt (liq.,US))

FUEL SYSTEM		
Fuel pump		In-tank electrical fuel pump
Fuel	Type	Premium unleaded gasoline (fuel which may contain up to 10% MAX ethanol)
	Octane rating	91 Pump Posted AKI ((R+M)/2) 95 (RON)
Fuel tank capacity		42 l (44.4 qt (liq.,US))

ELECTRICAL SYSTEM	
Battery	12 V, 18 A•h
Headlamp	LED

ELECTRICAL SYSTEM	
Taillight and stoplight	2 x 0.5/1.2 W LED
Fuses and Relays	Refer to the labels on the fuse box covers

DRIVE SYSTEM - CHAINCASE			
Chaincase oil (if equipped)	Type	Recommended XPS oil	XPS Synthetic chaincase oil
		If the recommended product is not available	75W140 gear oil that meets the API GL-5 specification
	Capacity		350 ml (17.6 fl oz (US))
Chain drive ratio			19 / 53 / 116

DRIVE SYSTEM - DRIVE AND DRIVEN PULLEYS		
Drive pulley	Type	pDrive - LD
Driven pulley	Engagement RPM	2300 ± 100 RPM
	Type	QRS

DRIVE SYSTEM - TRACK		
Drive sprocket number of teeth		8
Track	Width	500 mm (20 in)
	Length	3900 mm (154 in)
	Profile height	38 mm (1.5 in)

DRIVE SYSTEM - TRACK		
Track adjustment	Deflection	32 mm (1.26 in)
	Force	7.3 kgf (16 lbs)

BRAKE SYSTEM		
Brake	Type	Single 200 mm cross drilled carbon steel disc
Brake fluid	Type	DOT 4
	Quantity	65 ml (2.2 fl oz (US))
Caliper		Fixed twin pistons (2 x 40 mm)
Brake pad material		Organic
Minimum brake pad thickness (includes backing plate)		5 mm (.2 in)
Minimum brake disc thickness		4.5 mm (.177 in)
Maximum brake disc warpage		0.25 mm (.01 in)

FRONT SUSPENSION	
Suspension type	LFS+ (RAS X)
Suspension maximum travel	220 mm (8.6 in)
Shock absorber type	KYB 36

REAR SUSPENSION		
Suspension type		EasyRide+ FT
Suspension maximum travel		245 mm (9.6 in)
Shock absorber type	Center Rear	KYB 36

WEIGHT AND DIMENSIONS	
Mass (dry)	241 kg (531.3 lb)
Overall length	3240 mm (127.6 in)
Overall width	1200 mm (47.2 in)
Overall height	1500 mm (59 in)
Ski stance	996 mm (39 in)

TROUBLESHOOTING

TROUBLESHOOTING-GUIDELINES

1. ELECTRIC STARTER DOES NOT WORK

Emergency engine stop switch in OFF position or tether cord cap not installed on engine cut-off switch.

– *Place the emergency engine stop switch in the ON position and install tether cord cap (on engine cut-off switch.*

Throttle applied while attempting an engine start.

– *Release throttle while cranking.*

2. ENGINE IS CRANKED BUT FAILS TO START

No fuel to the engine.

– *Check fuel tank level, add fuel if necessary.*

System voltage too low.

– *Contact an authorized BRP snowmobile dealer.*

3. ENGINE RPM DOES NOT REACH CLUTCH ENGAGEMENT POINT

D.E.S.S. did not read D.E.S.S. key code in the tether cord cap.

– *Properly install tether cord cap.*

D.E.S.S. has read a different code than the one programmed.

– *Install a tether cord cap for which this snowmobile was programmed.*

ECM does not recognize the D.E.S.S. key.

– *Refer to an authorized BRP snowmobile dealer.*

4. ENGINE LACKS ACCELERATION OR POWER

Engine warm-up in progress.

– *Drive vehicle at low speeds for a few minutes.*

Engine break-in period not completed.

– *Complete break-in period.*

Drive and driven pulleys require servicing.

– *Contact an authorized BRP snowmobile dealer.*

Engine overheats.

– *Check coolant level, see Maintenance Procedures.*

– *Check heat exchangers cleanliness. Clean if necessary.*

Drive belt worn too thin.

– *If the drive belt has lost more than 3 mm (1/8 in) of its original width, it will affect vehicle performance.*

– *Replace drive belt.*

Incorrect track adjustment.

– *See Maintenance Procedures and/or an authorized BRP snowmobile dealer for proper alignment and tension adjustments.*

Fuel pressure too low.

– *Seek service from an authorized BRP snowmobile dealer, repair shop, or person of your own choosing for maintenance, repair, or replacement. Please refer to the US EPA EMISSION-RELATED WARRANTY contained herein for information about warranty claims.*

5. ENGINE BACKFIRES

Engine is running too hot.

– *See item 4 of ENGINE LACKS POWER.*

Ignition timing is incorrect or there is an ignition system failure.

– *Seek service from an authorized BRP snowmobile dealer, repair shop, or person of your own choosing for maintenance, repair, or replacement. Please refer to the US EPA EMISSION-RELATED WARRANTY contained herein for information about warranty claims.*

Exhaust system leak.

– *Seek service from an authorized BRP snowmobile dealer, repair shop, or person of your own choosing for maintenance, repair, or replacement. Please refer to the US EPA EMISSION-RELATED WARRANTY contained herein for information about warranty claims.*

Fuel pressure too low.

– *Seek service from an authorized BRP snowmobile dealer, repair shop, or person of your own choosing for maintenance, repair, or*

replacement. Please refer to the US EPA EMISSION-RELATED WARRANTY contained herein for information about warranty claims.

6. ENGINE MISFIRES

Water in fuel.

– *Drain fuel system and refill with fresh fuel.*

7. HEATED GRIPS/THUMB WARMERS ARE NOT WORKING

Engine RPM is too low.

– *Make sure engine RPM is above 2000.*

8. ENGINE HAS SHUT DOWN

The engine shuts down after long periods of idling.

– *Do not let engine idle too long. Refer to Vehicle Warm-up in Operating Instruction.*

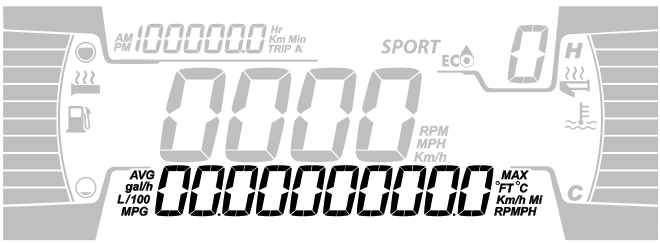
MONITORING SYSTEM

Pilot Lamps, Messages and Beeper Codes Pilot Lamps
4.5” Display

Gauge pilot lamp(s) will inform you if an anomaly occurs or to inform you of a particular condition.

Pilot lamp can flash alone or in combination with another lamp.

The lower display is used as a complement of the pilot lamps to give you a brief description if an anomaly occurs or to inform you of a particular condition.



4.5" DIGITAL LOWER DISPLAY

Messages will be displayed with a beep code and pilot lamp(s).

Beeper codes will be heard, and messages will be displayed to catch your attention.

See table below for details.

NOTE:
Some of the listed pilot lamps and messages do not apply to all models.

Pilot lamp ON	BEEPER	Message Display	Description
	4 short beeps every 30 seconds	HIGH ENGINE TEMPERATURE	Engine is overheating, reduce snowmobile speed and run in loose snow or stop engine immediately and let engine cool down. Check coolant level, refer to *Maintenance*. If coolant level is correct and overheating persists, contact an authorized BRP snowmobile dealer. Do not run the engine if condition persists.
		MUFFLER OVERHEAT	Reduce speed or stop engine. Let engine cool down and restart. If overheating persists, contact an authorized BRP snowmobile dealer. Do not run the engine if condition persists.
	Short beeps repeating rapidly	HIGH ENGINE TEMPERATURE	Critical overheat. Stop engine immediately and let engine cool down. Check coolant level, refer to *Maintenance*. If coolant level is correct and overheating persists, contact an authorized BRP snowmobile dealer. Do not run the engine if condition persists.
		MUFFLER OVERHEAT	Critical overheat. Stop engine immediately and

Pilot lamp ON	BEEPER	Message Display	Description
		ECM OVERHEAT	let engine cool down. If overheating persists, contact an authorized BRP snowmobile dealer. Do not run the engine if condition persists.
	4 short beeps every 5 minutes	BATT VOLT	Indicate a low or high battery voltage condition. Visit an authorized BRP snowmobile dealer as soon as possible.
	4 short beeps	CHECK ENGINE	Engine fault, see an authorized BRP snowmobile dealer, repair shop or person of your own choosing as soon as possible.
	—	—	Displayed when brake is applied for more than 15 seconds while throttle lever is squeezed and vehicle is moving at more than 5 km/h (3 mph).
—	4 short beeps every 5 minutes	KNOCK	Engine detonation (RPM is limited when this condition occurs). – Ensure recommended fuel is used. – Check fuel quality, replace if necessary.

Pilot lamp ON	BEEPER	Message Display	Description
			– If fault still occurs, contact an authorized BRP snowmobile dealer, repair shop, or person of your own choosing.
—	4 short beeps every 5 minutes	REV LIMIT	Engine RPM limited for protection when certain faults occur.
—	—	OVER REV	Indicates that maximum engine RPM is reached. Check clutch calibration.
—	Short beeps repeating rapidly	SHUTDOWN	Shutdown procedure in force due to engine overheating or fuel pump problem.
—	2 short beeps every 10 seconds	BELT OVERHEAT	The belt temperature reaches 75 C 167 F. Message and beeps disappears when the temperature drops below 75 C 167 F.
—	2 short beeps every 15 seconds	BELT OVERLOAD	If a critical condition is detected over 1 minute. Message and beeps disappears if the driver reduces critical style of riding.
—	2 short beeps every 10 seconds	BELT OVERLOAD	If it stills in critical condition over 10 minutes. Message will

Pilot lamp ON	BEEPER	Message Display	Description
			not disappear until the engine shutdown.
DESS	2 short beeps	—	Good key, vehicle ready to operate.
	Short beeps, repeating slowly	WRONG KEY	Unable to read key (bad connection). Make sure the key is clean and correctly snapped on post.
	Short beeps repeating rapidly	BAD KEY	Invalid key or key not programmed. Use the proper key for the vehicle or have the programmed.
(blinking)	—	—	Fuel level sensor problem.

Fault Codes

The fault codes can be displayed on the center display.

The fault codes are accessible in the setting menu.

Contact an authorized BRP snowmobile dealer for code signification.

- Vehicle Information (e.g., serial number, vehicle identification number, mileage, purchase and delivery date, unit usage, vehicle location and movements)
- Your comments, opinions and reviews of our products and services
- Information collected automatically when you navigate on BRP or dealer's websites or mobile apps collected via cookies and similar technologies (e.g., IP address, type of device, operating system, browser type, webpages you view).

We may also receive information about you from social media platforms when you interact with us on those platforms.

We use your personal information for various reasons, mostly to:

- Manage your order of BRP products and services (e.g., to complete or deliver your order, or service your BRP product)
- Provide customer support, assistance, and after-sales (e.g., complete or follow up with you about your order or maintenance, help with any delivery issues, handle returns, and other issues related to your purchase of BRP products)

- Manage your BRP products registration, warranty, security, safety recall, and dispute resolution (e.g. to offer warranty and after-sales service to you, protect your security and safety, perform safety recalls)
- Send you commercial communications about our products and services (e.g. inform you about new BRP products, services or features; share news about contests, promotions, and events or discuss products or services offered by BRP that may be of interest to you)
- Offer you personalized experience, content, or offers and services based on profiling or geolocation technologies (e.g. to notify you when your vehicle may need servicing, to locate your nearest dealership)
- Perform data analytics and statistics data that no longer identifies you personally, for business intelligence and have insights on how to improve our products and services
- Prevent, detect, and control fraud and any unauthorized or illegal activities (e.g., to detect and control fraud in relation to BRP products or services purchase; manage illegal or unauthorized activities and cyberthreats)
- Comply with applicable laws and regulations.

Your personal information may be disclosed to the following: BRP, BRP's authorized dealerships, distributors, service providers, advertising & market research partners and other authorized third parties.

Depending on the circumstances, your personal information may be communicated outside the region where you reside. Your personal information is retained only for as long as necessary for the purpose for which we obtained it and according to our retention policies.

To exercise your data privacy rights (e.g. right of access, right of rectification), to withdraw your consent in order to be removed from the address list for marketing purposes or for the satisfaction survey or for general data privacy questions, please contact BRP's Data Protection Officer at or by mail at privacyofficer@brp.com or by mail at: BRP Legal Service, 726 St-Joseph, Valcourt, Quebec, Canada, J0E 2L0.

When BRP processes your personal information, they do so in compliance with its Privacy Policy available at:

CHANGE OF ADDRESS/OWNERSHIP

If your address has changed or if you are the new owner of the snowmobile, be sure to notify BRP by either:

- Notifying an authorized BRP snowmobile dealer or distributor.
- **North America only:** calling 1-888-272-9222.
- Mailing one of the change of address cards on the following pages to one of the BRP addresses indicated in the *Contact Us* section of this guide.

In case of change of ownership, please include a proof that the former owner agreed to the transfer.

Notifying BRP, even after the expiration of the limited warranty, is very important as it enables BRP to reach the snowmobile owner if necessary, like when safety recalls are initiated. It is the owner's responsibility to notify BRP.

STOLEN UNITS: If your personal snowmobile is stolen, you should notify BRP or an authorized BRP snowmobile dealer. We will ask you to provide your name, address, phone number, the vehicle identification number and the date it was stolen.
