SHAPING THE FUTURE WITH INTELLIGENT ENERGY SOLUTIONS

The Carrier Energy Program delivers home comfort without compromise – while contributing toward grid reliability in your community.

Making Communities Better, One Comfort System at a Time

ENJOY COMFORT WITHOUT COMPROMISE

When you are a part of the Carrier Energy Program, your home becomes part of something larger. Every participating home helps to ease strain on the grid during peak times – contributing to a more reliable, resilient energy system for your community. It works by storing energy when demand on the grid is lower, then uses that stored energy to run your heating and cooling when demand rises – keeping your home comfortable while helping support your local grid.

THE CARRIER ENERGY PROGRAM

Shifting energy use from peak hours to times of low demand can significantly reduce grid strain – and your Carrier system will work behind the scenes to do this, without any impact to your comfort.

WHAT IT IS:

- The Carrier Energy Program pairs a high-efficiency heat pump with an attached energy system that includes a battery.
- Installation and any service for the energy system are included at no cost with the purchase and installation of your Carrier Performance 27VPA9 variable-speed heat pump and you sign up for the program.
- The heat pump delivers uninterrupted comfort without altering the temperature in your home – it works by storing energy when demand on the grid is lower, then uses that stored energy to run your heating and cooling when demand rises.

HOW THE PROGRAM WORKS:

- Select and purchase a qualifying system and enroll in the Carrier Energy Program with your dealer.
- Your new system is installed; including the energy system (no cost) with your heat pump purchase.
- Enjoy the comfort and efficiency of your system, while contributing toward grid reliability in your community.

NOTE: The battery in the energy system does not provide backup power during electrical outages.

MAKING AN IMPACT

Carrier is renowned for its ability to make individual homes more comfortable. Now, we are working to make communities more comfortable by helping to support local electric grids. If you are ready to enjoy efficient and reliable heating and cooling while helping alleviate pressure on your local electric grid, contact your dealer to see if the Carrier Energy Program is available in your area. To learn more, visit [carrier.com](https://www.carrier.com).
