4 /

<https://xxxx.devicesetup.net/>  
(XXXX represents the last 4 characters of the MAC address)  
Admin Password: XXXXXXXXXX

## Setting your C36 up as a Range Extender

To pair your devices with C36, follow the steps below.

- 1 / Plug in to power on C36 and place it near your wireless router. Wait for the Power LED to turn solid green.
- 2 / Press the WPS button on the router. Refer to your router's user manual for router behavior.
- 3 / Press the WPS button on your C36. The WPS LED indicator should start pulsing green.

- 4 / When C36's Internet LED turns solid green (may take up to 3 minutes), this indicates C36 is connected to your wireless router.

### You have now completed the setup !

You can move your C36 to any location you want for wireless coverage. By default, your C36 shares the same Wi-Fi Name and password of your wireless router.

### NOTE

WPS may be disabled on certain routers. If the LED indicator does not blink after pressing the WPS button, try again and press it a little longer. If that still does not work, use **Falcon APP** for setup instead.

## FAQ

### Why can't I access the Internet?

Please reset your wireless router, and if it still does not work, please contact your internet service provider.

### What do I do if I forgot my router's login password?

Please reset your wireless router to default settings and set it up again.

### How do I restore the router to its factory default settings?

With the router powered on, press the reset button with a paperclip for 1 second and then release it. The C36 will now be at its factory default settings.

### How to build a mesh network with ethernet backhaul?

To create a wired Ethernet backhaul connection, simply connect an Ethernet cable from the LAN port on your Mesh Wi-Fi router to the LAN port on your Mesh Wi-Fi node. The Status LED will turn solid white once it has finished pairing with your Mesh Wi-Fi network in a few minutes.

## FCC compliance statement

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

## Web Management Setup Notice

When you access the web management page of your D-Link device during installation, your browser may display a security warning stating, "Your connection isn't private." This is because the device's default management URL is not an actual Internet website with valid certificates and the security of the connection to the device is not compromised. You can proceed with the installation by following these steps:

1. Click the "Advanced" button.

2. Click "Continue to the default management URL."

Now you will be able to log in to your device.
