

by MOLEKULE

Goodbye, dry. Hello, Glow.

From skin care to beauty rest, meet your daily go-to for healthier, hydrated air.

by MOLEKULE

Air care is self care.

A humidifier isn't just for stuffy noses. It's a quiet boost for your beauty, sleep, and wellness routines. Because hydrated air benefits more than just how you breathe.

Pretty. Smart. Control.

It happens in the Molekule app.

Set a target humidity level and let Auto Mode do the rest.

Manual mode lets you fine tune your relative humidity levels.

Get smart alerts for low water, connectivity, and more.

Set your mist intensity and even 2-, 4-, and 8-hour timers.

Choose from a spectrum of color for a beautiful night light glow.

Get to know Glow.

Take a deep breath, follow these steps, and scan the QR code for more.

01 GIVE IT A QUICK CLEANING

Wipe the inside of the tank with a damp cloth to remove any dust or fibers from shipping.

02 FILL IT UP

Fill the tank with distilled water below the Max Fill line. Replace the lid and place the humidifier on the Surface Saver cork mat to protect delicate surfaces.

03 PLUG IN & POWER ON

Set on a flat surface and plug in the power cord. Scan the QR code below to learn more about settings and modes.

04 GET THE APP

Download the Molekule app and add your Glow. From there, you'll be able to customize and fine tune your home's humidity to your heart's content.

molekule.com/mo

Setting your Glow is easy.

Tap the middle control button to power on your Glow, hold it for three seconds to turn it off. The rest is a breeze:

1 TAP: AUTO MODE

Tap the middle control button once to activate **Auto Mode**. Use the $\oplus$ and $\ominus$ buttons to set your desired humidity level.

2 TAPS: TIMER MODE

Tap the middle control button twice to select a 2-, 4-, or 8-hour **timer**.

3 TAPS: LED LIGHT

Tap the middle control button three times to change the LED light color. Use the $\oplus$ and $\ominus$ buttons to cycle through colors or turn the light off.

The skin(*ny*) on hydration & humidity

Your skin is your largest organ,
and your body's first line of defense.

Dry air indoors can lead to micro-cracks
in your skin and premature aging.

You lose up to a liter of water overnight
through **insensible water loss**, which is
simply breathing and perspiring while
you sleep.

30–50%

The EPA recommends keeping relative humidity (RH) between 30% and 50%. That's the sweet spot where **comfort and health stay in balance.**

Many viruses survive longer in dry air. Humidity can reduce their ability to linger and spread.

Houseplants thrive in environments with balanced humidity levels. Moisture keeps leaves from drying out.

Humidity isn't just for humans—proper RH supports healthy skin and coats for dogs & cats, too.
