CARGO WEIGHT RATING
CENTER OF GRAVITY**

RAM

2019 RAM 1500 CLASSIC

CAMPER APPLICATION

2019 CONSUMER INFORMATION FOR RAM 1500 CLASSIC TRUCKS CAMPER APPLICATION

Under the authority of the National Traffic and Motor Vehicle Safety Act, the National Highway Traffic Safety Administration (NHTSA) has established certain requirements concerning trucks capable of accommodating slide-in campers. Manufacturers of such trucks are required to provide, the cargo weight rating and the longitudinal limits within which the center of gravity should be located.

This booklet is a compilation of that data. It is designed for the use and guidance of prospective purchasers who intend to use Ram pickup trucks to carry slide-in campers and related equipment.

Because conditions of improper load distribution or overloading can have adverse effects on vehicle steering and braking, possibly resulting in accidents, knowledge of the cargo weight rating and location of the center of gravity should be important factors to the prospective purchaser of any truck-camper combination.

In keeping with governmental requirements, this information must be maintained in truck dealerships and must be made available to all prospective purchasers who request it. If it becomes necessary to revise this information during a model year, dealers are responsible for making such revisions available to the public.

EXCLUSIONS:

The following Ram Truck models are NOT recommended for slide-in camper applications:

RAM

- TRX 1500
- All RAM 2500 Power Wagon models

Additional copies of this publication are available at no cost from:

FCA US LLC

P.O. Box 3189

Highland Park, MI 48203

CAMPER CENTER OF GRAVITY

CG ZONE (SHADED AREA): RECOMMENDED LOCATION FOR CARGO CENTER OF GRAVITY FOR CARGO WEIGHT RATING

RAM

The tables on the following pages designate the Cargo Weight Rating (CWR) and the Center of Gravity (CG) Zone for each vehicle listed.

- CWR for a given truck model is the cargo capacity, in pounds, excluding the weight of occupants in the cab of the vehicle.
- CG Zone is the area BETWEEN the forward limit dimension “A”, and the rearward limit dimension “B”, both measured in inches from the rear end of the truck bed or pickup box (see illustration above).
- When the truck is used to carry a slide-in camper, the total cargo load of the truck consists of the manufacturer’s camper weight figure, the weight of installed additional camper equipment not included in the manufacturer’s camper weight figure, the weight of camper cargo, and the weight of passengers in the camper. The total cargo load should not exceed the truck’s CWR and the camper’s CG should fall within the truck’s recommended CG Zone when installed.
- Secure loose items to prevent weight shifts that could affect the balance of your vehicle. When the truck camper is loaded, drive to a scale and weigh on the front and on the rear wheels separately to determine axle loads. Individual axle loads should not exceed either of the Gross Axle Weight Ratings (GAWR). The total of the axle loads should not exceed the Gross Vehicle Weight Rating (GVWR). These ratings are given on the vehicle certification label that is located on the left side of the vehicle, normally the dash, hinge pillar, door latch post, or door edge next to the driver. If weight ratings are exceeded, move or remove items to bring all weights below the ratings.

USING THE TABLES:

- At the top of each page are descriptions of the truck models; wheelbase; type of cab; size of pickup ox; style of seats; and the GVWR applicable to the truck.
- Sub-headings classify the CWR and CG Zone dimensions based on engine types available. Under the “Model” column, items of optional equipment (related to the vehicle’s intended use) are listed in various combinations, indicating their influence on CWR figures. Also when reading the tables you will see the remaining cargo space available in pounds.
- When reading the tables, you will notice that, as more optional equipment is added to the base vehicle, the CWR is decreased due to the additional weight of the options. At the same time, the size of the CG Zone changes due to the LOCATION of the added weight.

INSTALLING THE CAMPER:

- The CG of the loaded camper, as determined and marked by the camper manufacturer, must fall within the CG Zone of the truck (see illustration above).
- The total weight of the fully-equipped camper, furnished by the camper manufacturer, should not exceed the CWR of the truck. After the camper and auxiliary equipment is installed, proper loading should be verified on an accurate truck scale before putting the vehicle into service.
- Be sure the GVWR of the truck is not exceeded and that the loading on front and rear axle systems does not exceed their respective GAWR.

NOTE:

GVWR and GAWR data for the truck appears on the Safety Certification label, located on the door-latch post, on the driver’s side.

2019 1500 RAM CLASSIC CAMPER GUIDE

All calculations are with base weight; vehicle capability will vary with option content.
