Watering Tips

Water only when necessary, preferably in the morning to minimize water loss through evaporation. To promote deep root growth, water deeply but as infrequently as possible. Watch water application to avoid water run-off.

Maintenance + Care

Follow the steps below if the sprinkler stops working or exhibits poor water flow/performance due to debris or dirt build-up.

1. Remove the inlet filter from the hose-end of the oscillator and run under water (Fig. 4).

2. Remove the cleaning pin from the opposite end of the oscillator (Fig. 5).

3. To flush, connect the oscillator to a spigot. Turn on the faucet and while the water continues running, spin the tube gently back and forth for a few minutes. Then screw the inlet filter firmly back in place (Fig. 6)

4. Use the provided cleaning pin to clear any clogs from the spray nozzles. Fit cleaning pin firmly back in place before using the sprinkler (Fig. 7).

Storage

Drain the sprinkler after use. DO NOT allow water to freeze in the sprinkler (Fig. 8).
