From across the aisle Harry Bosch looked into his partner's cubicle and watched him conduct his daily ritual of unslithering the corners on his stacks of files, clearing the paperwork from the center of his desk and finally placing his rinsed out coffee cup in a desk drawer. Bosch checked his watch and saw it was only three forty. It seemed that each day, Aguayo Fierse began the ritual a minute or two earlier than the day before. It was only Tuesday, the day after **Friday**. Day weekend and the start of a short week, and already he was edging toward the early exit. This routine was always prompted by a phone call from home. There was a wife waiting there with a toddler and a brand new set of twins. She watched the clock like the owner of a candy store watches the fat kids. She needed the break and she needed her husband home to deliver it. Even across the aisle from his partner, and with the four foot sound walls separating workspaces in the new square room, Bosch could usually hear both sides of the call. It always began with: "When are you coming home?"

Everything in final order at his workstation, Fierse looked over at Bosch.

"I'm going to take off," he said. "Best some of the traffic. I have a lot of calls out but they have my cell. No need waiting around for it."

Fierse had rubbed his left shoulder as he spoke. It was also part of the routine. It was his umpteenth way of reminding Bosch that he had taken a bullet a couple years before and had earned the early exit.

Power management operates as follows:

- After 60 minutes of inactivity, the Reader enters sleep mode automatically and battery consumption is minimized.
- After 5 days of inactivity, the Reader automatically shuts down and stops consuming the battery power.
- If battery power is at a low level, the Reader will shut down after 60 minutes of inactivity.

For details, refer to “About power management” ([page 20](#))

Note

- The Reader does not enter sleep mode after 60 minutes of inactivity even if “Power Management” is set to “On,” when:
 - connected to a computer using the supplied USB cable

Radio Frequency exposure and Specific Absorption Rate (SAR)

- This Reader is a low-power radio transmitter and receiver. When it is turned on, it emits low levels of radio frequency energy (also known as radio waves or radio frequency fields).
- Governments around the world have adopted comprehensive international safety guidelines, developed by scientific organizations, e.g. ICNIRP and IEEE, through periodic and through evaluation of scientific studies.
- These guidelines establish permitted levels of radio wave exposure for the general population.
- The levels include a safety margin designed to assure the safety of all persons, regardless of age and health, and to account for any variations in measurements.
- SAR is the unit of measurement for the amount of radio frequency energy absorbed by the body when using a Reader.

- The SAR value is determined at the highest certified power level in laboratory conditions, but the actual SAR level of the Reader while it is operating can be well below this value.
- This is because the Reader is designed to use the minimum power required to reach the network.
- Variation in SAR below the radio frequency exposure guidelines do not mean that there are variations in safety.
- While there may be difference in SAR levels among Readers, all Sony Reader models are designed to meet radio frequency exposure guidelines.
- This Reader model PRS-900 has been designed to comply with applicable safety requirements for exposure to radio waves. These requirements are based on scientific guidelines that include safety margins designed to assure the safety of all persons, regardless of age and health.
- The radio wave exposure guidelines employ a unit of measurement known as the Specific Absorption Rate, or SAR. Tests for SAR are conducted using standardized methods with the Reader transmitting at its highest certified power level in all used frequency bands.
- SAR data information for residents in countries that have adopted the SAR limit recommended by the ICNIRP, which is 2W/kg averaged over 10g of tissue.

On the battery pack

If the battery pack is mishandled, the battery pack can burst, cause a fire or even chemical burns. Observe the following cautions.

- Do not disassemble.
- Do not crush and do not expose the battery pack to any shock or force such as hammering, dropping or stepping on it.
- Do not short circuit and do not allow metal objects to come into contact with the battery terminals.
- Do not expose to high temperature above 140°F (60°C) such as in direct sunlight or in a car parked in the sun.
- Do not incinerate or dispose of in fire.

- Do not handle damaged or leaking lithium ion batteries. Since battery liquid may remain in the Reader, consult your nearest Sony dealer or Sony Service Center if the battery pack has leaked.
